A Philadelphia correspondent writes me that the conductorship of that *Sporting Life* car was offered to the fair-and-square-to-the-yard Bunnell, commonly called "Bunny," who refused the honor which would have brought a cash prize reward. I also hear that Tom Eck telegraphed for a lower double berth for Johnnie Johnson and himself, and my informant says Johnson can go, but he must go alone, as there will not be room for three such renowned trainers as Eck, Windle and Troy in the same car. [Eck said Saturday that neither Johnson nor himself would go on the trip.—Ed.] I have been wondering how the car scheme promoters are going to make the trip a success from a racing point of view. If they go west they will strike

RECORD-MAKING MADE EASY.

UNCLE SAM (Manager): "There! I reckon that'll give Brother John something to talk about."—*Bicycling News*.

Luscomb, McLean and others, listen to this:

Mrs. C. Bresloe, of Brevort flats, Fulton street and Bedford avenue, said: "The limbs of these young men are an infliction, esthetically and from the standpoint of good taste. The majority of the riders are in their callow period. Callow things are never pretty, you know."

Callow things, eh? Well, well; wait for the next issue of Barney's *Announcer*. Mrs. B. will have cause for regret for calling the Brooklyn boys "callow things."

* * *

An Australian Bust.

Tom Busst, the Australian racing man, called in a down-town cycle store the other day, and in his very English way, remarked:

"I hear you are going to go for the cash in America shortly. The amateur pots are little use in any country, don't yer know."

"Yes, there is a great stir over the question," said the cycle salesman, "and if you will call at the REFEREE office, 21

says the principal features of the Windy City are big buildings and lard factories.

* * *

The Mills of the Gods.

It was a year ago the following appeared in the New York *Sun*, but time proves the mills of the gods may grind slowly, but they grind:

From time to time the League of American Wheelmen, or rather its officials, have been deploring the condition of affairs in amateur athletics, going so far as to murmur "semi-professionalism," and at one time undertook to prevent the bicyclist riding for A. A. U. clubs, from not only receiving traveling or training expenses, but from having their entrance fees paid by the wicked union clubs. This spasm of purity seems to have aroused the ire of Mr. William B. Curtis, one of the board of managers of the A. A. U., and in to-morrow's Spirit of the Times he will editorially wade into the L. A. W. concerning a recent bicycle meet, as follows:

"Our bicyclist friends love to vaunt their superior virtue on the amateur question, and are prone to deride the methods of amateur athletes. Sometimes they may be right, at others they are certainly wrong. Recent happenings are instructive. W. W. Taxis, Philadelphia, was entered by

extreme cold weather in November—too cold to draw a crowd—and when they strike California the rainy season is likely to strike them from their arrival to their departure. The tracks, too, will be disappointing. Only one on the coast is worthy the name of track, and that is "Bob" Smythe's Alameda creation. The men in the meantime will get as fat as Christmas turkeys, and will not be able to ride fast enough to keep a kite up. This will disappoint "the thousands" which are expecting to see the world-beaters. Of course home-trainers in the car may help them out, but the change of water and diet will play havoc with their speed. They will find tracks in Denver; more in Salt Lake; trotting track in Tacoma, Seattle, Victoria and Portland; trotting and poor cycle track in Frisco; passable cycle track in Stockton; trotting tracks in San Jose, Sacramento, Napa and other California towns; trotting tracks at Los Angeles and San Diego, and trotting tracks through New Mexico and Texas, with the exception of Houston. From a racing standpoint I therefore conclude that the trip cannot be a record-breaker, but as an advertising scheme it may do some good—it will certainly for the *Sporting Life*. The people who will gather to see the men race will expect to see them do record time, and will not be entirely satisfied with anything else. Egan this week seems afraid of the racing board and the probable action it will take. Although not being gifted with prophetic vision, I will venture to predict that the board will not interfere in the way Egan anticipates. The truth is it dares not. But I am still predicting that that professional cash prize scheme of Egan's will not go through next season, although the majority of the papers took the bait, hook and all.

Grover Cleveland and Good Roads.

Some two months ago I mailed the democratic candidate for president a copy of the Memorial to Congress for a good roads exhibit at the world's fair; also a copy of *Good Roads*, and last, but not least, a copy of the REFEREE. I also sent the Hon. Grover a letter asking him to give an expression on the subject of good roads. I received no reply, and thinking he was too busy fishing, I laid low, so to speak, and yesterday paid the Victoria Hotel a visit, but found my man had gone to Brooklyn to view the parade. I went to the hotel early to day, and being fortified with a letter, sent same up to the great man's room with my card. Presently the bell boy returned with "There is no answer." As I was turning away a genial young man, who introduced himself as Mr. Cleveland's private secretary, O'Brien by name, informed me that he had opened the letter, and as Mr. Cleveland was busy with callers he thought it best that I should not wait, but trust to the mail for a reply. But I can tell you now it is extremely doubtful if you receive a reply as there are stacks of letters that can't be answered for weeks, upon every conceivable topic. Personally I have no fear in saying that Mr. Cleveland is heartily in favor of the betterment of the roads of his country. "By gad, they are not roads, but ditches; and being a progressive man Mr. Cleveland would, I know, favor any legislation to that effect. You may hear from him, then again yet may not," were Mr. O'Brien's last words as he made his way to the elevator with a large bag of mail.

Some Cash Prize Poetry.

I was feeling poetical the other evening, so with the help of a blacksmith and a time limit put on by Referee Ray-

mond, I ground out the following. The metre and rhyme are "rocky," but it means well:

FAREWELL OF THE MAKERS' AMATEUR.

Farewell, my friends, my makers dear,
I am not dead, but very near;
Farewell to dreams, pianos and trash,
I'm out for the stuff, the good hard cash.

My road has been rocky, no one can deny;
My expenses large, my salary high;
The professionals are jealous, amateurs same,
And all seem onto my "green goods" game.

We will follow the man who carries the swag,
Be he Quaker, poet, or trainer bad;
Ride in palace cars, exhibit our form,
And talk amateur purity from night to morn.

We are not going on a tour of inspection
To the land of the hustling, windy west;
We will have some time for retrospection,
And some little time to feather our nest.

The cash prize bugle now is sounding,
We are girding our loins for a stubborn fight;
A hearty welcome to the gold that glitters,
Though we miss the checks on Saturday night.

of carriages and extended an invitation to all to celebrate the event. Last year he served the Milwaukee Wheelmen as first vice-president, and declined the nomination for president in 1892 on account of the pressure of business interests. He is at present a member of the board of directors. It is safe to assert that no members of the Milwaukee Wheelmen has its interest more at heart or responds more liberally with time and money to its support than Mr. Binner. He is the president of the Binner Engraving Company and is well and favorably known in the business world of the city of breweries.

Goes With The Monarch.

On Nov. 1 L. M. Richardson severs his connection with the Humber Rover Cycle Company, of which he is vice-president, to accept a position as asist-

O. E. BINNER

Then here's to scheming Troy and Egan,
Who know the follies of weakly man;
We'll help to boom their schemes and paper,
And ride for them on the cash prize plan.

Principal Milwaukee Riders.

An ardent admirer of the wheel and an enthusiastic devotee of every and anything connected with cycling, Oscar E. Binner, the subject of this sketch, stands conspicuous as one of the foremost figures in the wheeling fraternity of the Cream City. Ever since he mastered the tricks of this wily combination of men's ingenuity he has been in love with the sport. He was the first wheelman in the city to arrange a seat on the front of his wheel for the purpose of giving his little daughter a spin in the park. The picture, "Papa, my Rambler and Me," published in all the cycling papers in the country, has made his face familiar to all. In any movement having for its object the advancement of cycling, Mr. Binner will be found among its advocates. At the inauguration of the Waukesha road race a few years ago he hired a tally-ho cart and a number

ant manager of the Monarch Cycle Company. Mr. Richardson feels that the days of the importing business in cycles are limited, and that American wheels will soon have everything their own way in this country. The Monarch Cycle Company will have next season, with a line of wheels built on Humber lines, a racer, twenty-three pounds, scorching, thirty-one or thirty-two pounds, and roadster thirty-eight pounds, besides a ladies' wheel weighing thirty-five pounds. The company has every facility for turning out as fine a wheel as there is on the market. Mr. Richardson was one of the pioneer advocates of cycling in the west, and, in fact, in the country. In 1880 he was appointed Wisconsin agent for the Pope Manufacturing Company, at Milwaukee. It was during this year that Mr. Richardson conducted the first six-day bicycle race ever run in America. For many years he was connected with the John Wilkinson Company, selling out its bicycle stock to the Humber-Rover company, and going with the new concern himself.

WHAT THE EASTERNERS THOUGHT.

They Liked Chicago and Their Treatment —*"The Dark Secret."*

After a whole week's stay in the World's Fair city the eastern racing contingent—Zimmerman, Tyler, Smith, Dornitze, Hess—left for their respective homes on Monday afternoon, while Wheeler went to Kansas City and Culver to Milwaukee, on business matters. The departure of these prominent visitors was regretted by the members of the Chicago Cycling Club, the prominent wheelmen who become well acquainted with them, and by even themselves. For the past week they have eaten and slept at the Chicago club house and at its expense; the members tried to make things pleasant and entertaining for them and if the easterners' words are to be believed they were successful. Zimmerman expressed great admiration for Chicago, and said he had never in his life enjoyed himself more. And he was so appreciative—and so were the others, too—that the boys could hardly do enough for him. They took much enjoyment in entertaining such distinguished racing men, and will no doubt do so again.

ZIMMY WAS SHY.

Zimmy, as usual, was shy, and when introduced to the crowd at Washington Park Saturday, simply bowed and—what a sudden disappearance he did make! Tyler was not in anything like his proper form or Sanger would not have beaten him in the two-mile open Friday. Though not very successful in the races he enjoyed his visit hugely, saw much and promised to return sometime. Dornitze says Chicago is the only place to live; Hess said: "I be back in forty day;" Smith, "Out of sight," and Wheeler and Culver were equally as expressive. Wheeler and Hess nearly became lost one night and on finding their way to the club house declared that Chicago was as big as two New Yorks. Zimmy said he hadn't seen much of the place; he was afraid he would miss one of Harry Leeming's meals, so stayed at the club house a goodly share of the time. It might be remarked that these men are terrible eaters—any one of them can easily take care of three meals suitable for an ordinary mortal.

"THE DARK SECRET."

Friday evening, when a ring at the C. C. C. front door was answered, an inquiry was made for Mr. Zimmerman. "Tell him a gentleman from Jersey is here," said the caller. Zimmy went to the door and uttered an exclamation—"What, the Dark Secret?"

It was he.

The "Dark Secret" is a young colored lad name John Backus, who was at every meet on the eastern circuit, and who would follow Zimmy through a sea of fire. When he heard that Zimmy was in Chicago he left Freehold, N. J., went straight to New York and took a "blind baggage" on the New York Central as far as Albany. This was Tuesday night. Then he made a jump to Buffalo and taking a Nickel Plate train reached Cleveland Thursday. He reached Chicago and the C. C. C. house Friday evening at an expense of thirty cents. A song and dance, which he gave, netted him over four dollars, and on that he could probably have encircled the globe. In the east he followed the cracks about, and when a jump was made during the night the "Dark Secret" would be missing. But he would turn up in time for the races in the afternoon, no matter how far he had to go or under what circumstances.

With the close of the World's Fair dedication tournament at Washington Park, Chicago, last Friday and Saturday, the western circuit and the racing season of 1892 ended, though it is more than likely that some sort of a winter circuit will be arranged. The tournament was a success in every particular and the Chicago Cycling Club is the richer by several thousand dollars as a result of much hard labor by the various committees and officers and members. This is the fourth meet given by the club this season, though the first two were but small affairs and arranged only to bring out new racing talent among the members. However, these two small meets netted the club some, \$200 and urged the club to give a larger one Aug. 26 and 27. This gave the club a profit of over a thousand dollars, and allowed a strong team to go on the eastern and western circuits, which proved a big advertisement for the dedication tournament. The profits of the meet will materially aid the club in building its new home on Washington avenue.

THE WEATHER WAS FINE.

Thursday night, when the track was being worked into shape, and when the last necessary arrangements were being made, a gloom overspread the faces of those in charge of the tournament, and the visitors and racing men were also fearful of a postponement, for the sky became cloudy and drops of rain began to fall. There were good prospects of a rainy day on the morrow, and even the weather bureau predicted such. But, happily, Friday morning dawned clear and bright, with a slight wind blowing from the southwest. At 2 o'clock it was very warm and remained so all day. Saturday was a similar day, but towards 5 o'clock the wind shifted to the northwest and the cold wave which came with it made it uncomfortable for those who were not moving about. The wind Saturday was stronger—considerably so—than on Friday, and last quarters were consequently slow.

A LARGE ATTENDANCE.

Because of the dedication exercises at the World's Fair on Friday and the large

Finish of the Invitation Handicap

number of visitors to the grounds Saturday, the transportation facilities were

inadequate, and many were unable to conveniently reach the track. For Friday a large number of complimentary tickets had been issued, and as a result some 12,000 people were on the grounds, two-thirds of whom paid, however. Saturday there were not less than 4,000 in attendance. The crowd was not an enthusiastic one, probably because the grand stand was so far from the track that the riders could not be distinguished except by those who knew them well. But there were many there who had never seen a bicycle race, and not a few expressed themselves as well pleased with the sport as with horse racing. The veranda of the club house was well filled with club members, and about the grounds many an old horseman was located, apparently interested greatly.

PROMINENT PEOPLE PRESENT.

The most prominent people in cycling saw the races and commented most favorably upon the beautiful grounds, the large attendance and the fine, smooth track. Col. Burdette, president of the league, was referee; Howard E. Raymond, chairman of the racing board; F. W. Gerould, chief consul of

The Lincoln Band was there

the Illinois division. Col. Albert A. Pope, Charles E. Randall, Fred Patee, judges. All the members of the racing board and executive were there. H. G. Rouse, T. F. Sheridan and R. C. Lennie were timers; H. B. Hanford and W. A. Shockley announced the results. L. W. Conkling, assisted by R. W. Slusser, was starter, while E. C. Bode was clerk, assisted by T. T. Roe. Marshal Herrick, two or three assistants and a half-dozen policemen kept the track clear of all but officials and contestants, so that there was little trouble in running the races promptly. Each race had a fixed time for starting and Starter Conkling was never more than two minutes behind the schedule, so that no interest in the events was lost.

THE TRACK WAS PERFECT.

Up to the Sunday prior to the date of the meet horses had been allowed on the track for practice, so that it was very rough excepting quite near the pole.

On that day, however, Supt. Connolly of the grounds began working the scraper, and by Friday a faster mile track was never seen. Its surface was hard and dry, and after the smoother had gone over it, it was as level as a cement walk and as fast, too. The eastern men said it certainly ranked ahead of Hartford—well known as a record-breaking track—and next to the half-mile oval at Springfield. The track appears to be a very long mile, but was found to be six feet nine inches short, so the starts were made back of scratch that much for each mile, while the half-mile start was made half that distance back of the post.

THREE RECORDS BROKEN.

The track was fast enough, notwithstanding the wind, to lower three records. In the two-mile handicap Friday, Johnson and Lumsden started at scratch to overtake a field of thirty men, the limit being 350 yards. The latter quit after going a mile, while Johnson overhauled man after man, but was un-

Rhodes wing the piano

able to get a place. He covered the two miles in 4:41, which is world's record in competition.

Friday after the races Winship, Merrill and Banker went for the half-mile flying start triplet record, and succeeded in making it 59 sec., the last quarter being 27 1-4. Saturday the same men made another trial and rode the first quarter in 29 sec. and the half in 57 4-5 sec. Johnson had intended going for the mile record, with the two triplet teams for pacers, but the wind was so strong that he thought it would be useless to make the attempt, and besides he was far from being in the best of shape.

COULDN'T GET RUNNING HORSES.

The management fully intended to have Nancy Hanks, Jay-Eye-See or Mascot in a race against some of the cracks, but these celebrated horses could not be secured because they had other engagements. Running horses, hitched to sulkies for pacemaking in record attempts, was also to be a feature. A whole week was spent in trying to find suitable horses, but in vain. Horses that were fast enough were found, but had never been broken to harness, while those that would pull a sulky could not travel under two minutes for the mile and would, consequently, be of no use, for the triplet could give better service. As it was there were no horses on the grounds, so a great many were disappointed. But it was no fault of the management, for two men were kept busy looking up horses for a whole week.

ZIMMERMAN WAS THERE.

Zimmy attended the meet both days and, in fact, was a visitor to Chicago for a whole week. He was stared at and cheered by all, and when introduced to the great crowd in the grand stand the cheers were loud and long. But Zimmy didn't like it and got out of the judges'

stand and back to the track as soon as possible, while the crowd yelled for a speech. He wasn't in the speech busi-

Zimmerman is introduced

ness just then and took advantage of an opportunity to go to the half-mile post to start Wheeler in order to escape the crowd. When he went up into the grand stand he was surrounded immediately and had hard work to get through the crowd. Zimmy didn't ride, though he expected to when he started. He was not in shape and had been advised to quit racing for the season. In fact his physician had cautioned him against getting on a wheel—and he obeyed the doctor.

MUSIC AND TRICK RIDING.

The Lincoln C. C. band was on hand both days, and the fifteen members gave some excellent music. They were attired in neat cycling costumes and were greatly admired. Although somewhat new, the organization is very complete, and a year hence will prove a strong card at all the principal meets. A. J. Nicolet, of the Chicago club, gave clever performances of trick and fancy riding on the ordinary, Eagle and safety, and when he rode past the grand stand on the wheel of the latter type he was given a hearty applause. Johnson, of 1:56 3-5 fame, also attracted considerable attention, while the "Milwaukee push" saw to it that Sanger's presence was made known. Modest Harry Tyler made friends with the crowd and the racing men. He did not do particularly well, but it was owing to a fall in Canada a short time since, which prevented more than two or three days' training.

First Day's Races.

One-mile, novice—First heat—J. E. Hudson, Wash. C. C. 1; H. E. Skinner, Chicago, 2; W. E. Barnum, Eng. C. C. 3; D. Robertson, Chicago, 4; time, 2:37. There were eleven starters, and up to the three-quarter pole it was anybody's race. Hudson made a good spurt and finished ten yards ahead of the bunch.

Second heat—A. D. Kennedy, Jr., I. C. C. 1; F. C. Becker, Blue Is. C. C. 2; C. E. Jones, Chicago, 3; C. J. Guthrie, Eng. C. C. 4; time, 2:47 2-5. There were ten starters. Kennedy won by two lengths, a length separating second and third.

Final heat—J. E. Hudson, 1; A. D. Kennedy, Jr., 2; H. E. Skinner, 3; time, 2:40. There were eight starters, Hudson winning by several lengths.

One-mile, 2:20 class—W. A. Rhodes, C. C. C. 1; J. P. Bliss, C. C. C. 2; C. W. Davis, C. C. C. 3; H. A. Githens, C. C. C. 4; time, 2:30 1-5. There were fifteen starters, including Sanger, Johnson, Smith, Barrett, Hess, Keator, Dorntge and Ballard. Sanger fell on the back stretch and three others went down. He protested Davis, claiming that the Chicago man had cut in front of him, striking his wheel. Davis was disqualified. A limit of 2:40 was set on the race. Rhodes made a jump at the three-quarter pole and got a good lead. Close to the finish Bliss forged into second place. Sanger was badly scratched and several wheels were wrecked.

Half-mile, handicap—First heat—G. L. Emmerson, Eng. C. C. 70 yards, 1; D. B. Southern, L. C. C. 70 yards, 2; G. C. Smith, U. C. R. 20 yards, 3; R. F. Richardson, C. C. C. 75 yards, 4; time, 1:04 2-5. There were sixteen starters, Davis being on scratch. Emmerson won by a yard from

1893.

Kirkwood, Miller & Company,

PEORIA, ILL.

Southern, who was hardly a foot in front of George Smith.

Second heat—A. E. Lumsden, C. C. C., scratch, 1; G. K. Barrett, C. C. C., 20 yards, 2; H. R. Winship, Eng. C. C., 40 yards, 3; time, 1:19 1-5. There were no other starters and no need of hurrying. Lumsden passed Barrett ten yards from the tape.

Third heat—Roy Keator, C. C. C., 60 yards, 1; H. F. Heuman, Nat. A. C., 60 yards, 2; Carl Hess, M. A. C., 85 yards, 3; time, 1:06 3-5. Some of those in the second heat were started in this heat, which was won by two yards.

Fourth (extra) heat—P. H. Sercombe, Mil. W., 100 yards, 1; W. A. Rhodes, C. C. C., 15 yards, 2; W. C. Sanger, Mil. W., scratch, 3; A. L. Leonhardt, Cal. W., 50 yards, 4; time, 1:06 1-5. Some of those who did not come out for the other heats were

the tape, while Lumsden beat Barrett out for third. The Milwaukee man received a great ovation on winning the only race in which he finished. He started in one other only, but fell.

One-mile, 2:40 class—First heat—O. C. Green, 1; A. L. Leonhardt, 2; A. T. Heywood, 3; time, 2:45 2-5. Green took things easy until two hundred yards from the tape, when he went up like a shot and won five yards to spare.

Second heat—G. L. Emmerson, 1; H. F. Heuman, 2; G. E. Wilkinson, Elgin, 3; time, 2:45 1-5. Emerson won by a half-length.

Two-mile, 5:00—C. W. Dornette, 1; J. P. Bliss, 2; E. W. Ballard, 3; O. C. Green, 4; time, 5:26 1-5. A baker's dozen started and the race began at the three-quarter pole. From that point to the tape it was anybody for first, but Dornette secured a slight lead and kept it, though Bliss fought him hard, while Ballard was close up.

**

The Second Day.

Quarter-mile, open—George C. Smith, U. C. R., 1; W. A. Rhodes, C. C. C., 2; A. E. Lumsden, C. C. C., 3; time, :35. Also rode Tyler, Davis, Barrett and Wheeler. Smith got a good lead at the start but was nearly overhauled at the finish. He won by a scant foot from Rhodes, who beat Lumsden.

One-mile, 2:40 class, final—O. C. Green, C. C. C., 1; W. Bainbridge, Col. W., 2; W. F. Heuman, Nat. A. C., 3; A. T. Heywood, L. C. C., 4; time, 2:39 1-5. There were five other starters. The limit was 2:55 and no run-over, so that a good race was the result. Green won the race in the last hundred yards.

Five-mile, invitation handicap—Carl Hess, M. A. C., 325 yards, 1; J. P. Bliss, C. C. C., 175 yards, 2; O. C. Green, 350 yards, 3; time, 14:15 1-5. A Frenchman named Osborne was permitted to start scratch, but got over only about four miles when the winner crossed the tape. Bliss made a splendid spurt at the finish and all but beat Hess. Bainbridge had 600 yards and kept a good lead until he caught Ulbricht (of the same club) who had dropped back two-thirds of a lap. Then Ulbricht made pace for him and he was first over the tape. A protest was allowed Bainbridge was disqualified and the race given to Hess. When the back-mark man caught the field a grand loaf began, no notice being taken of Bainbridge, thought it was not known to the others that he was taking Ulbricht's pace.

Half-mile, open, first heat—John S. Johnson, C. C. C., 1; W. A. Rhodes, 2; H. A. Githens, C. C. C., 3; time, 1:19. A loaf all the way, as there were no other starters.

Second heat—A. E. Lumsden, 1; C. W. Davis, C.

C. C., 2; G. K. Barrett, C. C. C., 3; Roy Keator, C. C. C., 4; time, 1:08 1-5. This was a hustling race all the way through, although the four who qualified were the only starters.

Final heat—C. W. Davis, 1; W. A. Rhodes, 2; J. S. Johnson, 3; A. E. Lumsden, 4; time, 1:44. This was such a grand loaf that those who pushed the men off and the starter mounted their wheels and finished before the contestants. But it was a fight for the last hundred yards and a good victory for Davis.

One-mile handicap, 2:30 record—E. W. Ballard, C. C. C., 75 yards, 1; J. P. Bliss, 40 yards, 2; G. K. Barrett, 40 yards, 3; O. C. Green, 100 yards, 4; time, 2:25 2-5. Bliss and Barrett caught the bunch on the last quarter, but could not overtake Ballard, who won by ten yards, half that distance being between second and third.

One-mile, dedication (piano race), prizes for quarters—W. A. Rhodes, 1; A. E. Lumsden, 2; C. W. Davis, 3; H. C. Tyler, S. B. C., 4; H. A. Githens, 5; time, 2:47. The time limit was 2:45, but the referee allowed the race. Keator was given a tip to go for the first quarter, which he got with ease. Then he kept on going, and opened a gap of a hundred or more yards, passing the half way ahead. Here he slowed up, looked around to see where the others were and again went out—for the three-quarters, which he secured. Then he went for glory and the piano, as he said, but the bunch passed him. The fight down the stretch was hot, and Rhodes won by a length. He was carried on the shoulders of two club-mates be-

fore the grand stand amid great applause. Keator certainly could have won the piano had he not slowed up after passing the half-mile post.

Half-mile handicap, final—G. L. Emmerson, Eng. C. C., 70 yards, 1; G. C. Smith, U. C. R., 20 yards, 2; E. W. Ballard, 45 yards, 3; P. H. Sercombe, Mil. W., 100 yards, 4; time, 1:04 4-5. Emmerson won by a length.

One-mile, triplet, flying start—Banker, Merrill and Winship, 1; Bliss, Githens and Barrett, 2; time, 2: 9 1-5. The time limit was 2:20 and the winners were twenty-five yards ahead at the finish. This was because the tire of the other machine went flat.

Bicycle and Trotting Races.

At the trotting races at Franklin Park, Boston, last week Wednesday, bicycle racing appeared to be the feature of the day. There were three races on the programme. The first, the novice, was won by H. P. McGeary in 2:55, A. B. Jewell second and A. R. Schultz third. In the three-minute class there were eight starters, H. W. Robinson of Malden being first in 2:44, F. H. Pratt of Linden second, and W. F. Coleman third. In the free-for-all there were a dozen starters. E. A. McDuffie was first in 2:41, P. J. Berlo second and Connolly third. H. W. Robinson made pace from the start to the head of the stretch, and then came in fourth.

The Race Didn't Take Place.

Last week Saturday Buffalians thought they would have a road race, but now it is as far off as ever. At a meeting held on the evening of last Thursday, at which the Buffalo Athletic Club, the Press C. C. and the Ramblers B. C. of Buffalo were present, and also the Genesee Wheeling Club of Rochester, through their delegates, all the details were arranged and decided upon; but it seems that when the delegate from Rochester reported there was war in the camp and his work was not accepted. The clubs had decided to make the run over the course from Buffalo to Corfu

put into this one. It was a close finish between Rhodes, Sanger and Leonhardt.

Two-mile, handicap—W. A. Rhodes, 75 yards 1; O. C. Green, 175 yards, 2; G. L. Emmerson, 275 yards, 3; J. P. Bliss, 75 yards, 4; time, 4:39 3-5. Johnson and Lumsden were the only scratch men, the latter dropping out at a mile and three-quarters, while Johnson rode to fifth place in 4:41, world's competition record. Rhodes made a good spurt and maintained it across the tape, a length ahead of Green.

Two-mile, open—W. C. Sanger, 1; H. C. Tyler, S. B. C., 2; A. E. Lumsden, 3; G. K. Barrett, 4; J. S. Johnson, 5; time, 5:13 2-5. This was the best race of the day, an even dozen starting. It was not fast except at the finish, which was close, Sanger pushing a foot ahead of Tyler when near

and return, with six men in each team, and each club was to put up \$25 toward the grand prize. When this decision was announced the Buffalo A. C. at once backed down and out, which was considerable of a surprise to everyone, as it has been hankerin' for a go between itself and the Rochester boys. The B. A. C. was the only club to do any kicking, and everything pointed to an interesting race between the clubs remaining.

It was expected that an interesting run of 200 miles between Foell of the Press and Klipfel of the Ramblers as per challenges would have been a thing of the past by this time, but now that, too, is thrown over. Foell waited so long before he formally answered Klipfel's challenge that the latter got tired and settled down to business and politics, and when Foell's answer came Klipfel said, "too late"

A California Field Day.

The Los Angeles (Cal.) Athletic Club gives its fall field day at Athletic Park Thanksgiving day, when the following cycle events will take place: One-mile, novice; one-mile, open; one-mile, 2:35 class; half-mile, open; two-mile, handicap.

* * *

Philadelphia's Local Meet.

The race meet of the Tioga Athletic Association on Columbus day was a genuine local affair, their being no "cracks" what-ever present. There has, however, been no meet this season where the majority of the finishes have been so close, the natural result of so many evenly-classed riders. Following is the summary:

One-mile, novice—First heat—Frank Bennett, 1; W. C. Wunder, C. C., 2; W. Carson, 3; time, 3:15 1-5.

Second heat—S. N. Lafferty, Eclipse Wheelmen, 1; C. M. Simpson, Eclipse Wheelmen, 2; H. Koehler, Dorian A. C., 3; time, 3:14.

Final heat—S. N. Lafferty, 1; W. C. Wunder, 2; time, 2:52.

Third-mile, scratch—H. T. Wunder, C. C., 1; J. J. Diver, A. C. S. N., 2; O. S. Brandt, M. A. C., 3; time, :49 4-5.

One-mile, 3:00 class—First heat—C. A. Marple, T. A. A., 1; S. H. Rich, C. C., 2; Joseph Huston, Dorian A. C., 3; time, 2:55.

Second heat—S. N. Lafferty, 1; C. Miller, E. C., 2; G. F. Bowman, Q. C. W., 3; time, 2:19 4-5.

Final Heat—S. H. Rich, 1; A. C. Marple, 2; C. Miller, 3; time, 3:20.

One-mile, handicap—H. Butcher, E. W., 135 yds., 1; J. J. Diver, 70, 2; J. C. Donnelly, O. W., 30, 3; time, 2:32 2-5.

One-mile, tandem, handicap—A. A. Gracey and H. T. Wunder, 25 yds., 1; E. E. Hersh and A. L. Biery, Allentown, 90 yds., 2; time, 2:38 2-5.

One-mile, 2:40 class—H. N. Swank, P. A. W., 1; J. J. Diver, 2; W. Hunter, 3; time, 5:55 3-5.

Two-mile, handicap—H. Butcher, 250 yds., 1; W. Pollock, Dorian A. C., 170, 2; H. N. Swank, 160, 3; time, 5:22 4-5.

One-mile, handicap, T. A. A.—H. T. Wunder, scratch, 1; A. C. Marble, 90 yds., 2; J. C. Donnelly, 30, 3; time, 2:30.

* * *

The Scheme is Off.

The prospect of Messrs. Quin and Hinkle renting the Milwaukee Exposition building during the present winter has been abandoned, as they were unable to make a satisfactory lease. It was their intention to have bicycle races every Saturday evening, and at that rate it would not have taken long to destroy all interest in the sport. Mr. Quin is proprietor of Athletic Park, and is considering very seriously the advisability of building a quarter-mile track. If he should do so, there is no doubt that it could be made very popular.

* * *

Tournament at Newark, Ohio.

The first tournament of the Licking Cycling Club of Newark, Ohio, was held at the fair grounds on Friday afternoon last, and was an unequalled success. About two thousand people were present and the club will realize a neat sum from the affair. The weather was perfect and the track in fair condition. The races

were interesting and the finishes close in nearly all events, although French easily won every open race, carrying away two go'd watches and a diamond pin. The officers were: Referee, B. V. K. Schulz, Zanesville, O.; judges, S. M. Culbertson, Zanesville; E. P. Moore, Columbus; E. F. Appy, Granville.

SUMMARY.

Half-mile, club—J. J. Daniels, 1; J. R. Brown, 2; H. D. Simpson, 3; time, 1:19.

One-mile, 2:50 class—E. Zarskey, Akron, 1; F. W. Elliott, Zanesville, 3; S. I. Wilson, Columbus, 3; time, 3:03.

Half-mile, boys under fourteen—Fred King, Newark, 1; Harvey McCreary, Mt. Vernon, 2; Fred Johnson, Newark, 3; time, 1:31 2-5.

One-mile, open—A. N. French, Columbus, 1; E. Zarskey, Akron, 2; W. C. Hughes, Zanesville, 3; time, 2:45.

Quarter-mile, county—J. R. Brown, 1; H. L. Simpson, 2; B. B. Jones, 3; time, :38 1-5.

Five-mile, club—J. J. Daniels, 1; H. L. Simpson, 2; H. D. Rank, 3; time, 16:30.

Half-mile, open—A. N. French, Columbus, 1; E. Zarskey, Akron, 2; F. W. Elliott, Zanesville, 3; time, 1:16 3-5.

Two-mile, lap, open—A. N. French, 13 points, 1; S. I. Wilson, 6 points, 2; W. C. Hughes, 2 points, 3.

Fifty-yard, slow—George Boyles, 1; H. D. Rank, 2; time, 1:26.

One-mile, county—J. J. Daniels, 1; H. I. Holmes, 2; Grove B. Jones, 3; time, 2:43 2-5.

Two-mile, team—Newark, 44 points; Granville, 40 points.

Consolation, H. Dorsey, 1; C. E. Harris, 2; C. B. Allen, 3.

Just About the Size of It.

It would be a hopeless and thankless task to even attempt to raise the present cyclists to a pure amateur basis; I fear they are imbued with the taint of professionalism beyond redemption; they do not want a pure amateur basis; by their own confession they would prefer money prizes, and they are racing to-day solely for what they can make out of it.

It must be extremely mortifying to American sportsmen—it is to me—not to be able to point with pride to the fast riding of our racing cyclists as the work

of amateurs. How can one be proud of a countryman, be his work ever so clever, who is riding under false colors, which is tantamount to saying he is leading a dishonest life? A man who is dishonest in his sport I would not trust in any walk of life. There are no degrees of honesty.

I claim that some of the manufacturers and some of our clubs are responsible for the souls of many unsophisticated young men whom they have led astray. I have no language strong enough to express my contempt and the contempt of all fair-minded men for the officials of clubs who deliberately plan the pollution of the innocent and ignorant lads for the sake of securing a few more points than the rival club.

This question of legislation in amateur sport is too lightly considered, and entrusted too often to men not in touch with its truer and higher significance. Sport is an educator of the boy; if he is honest and fair in that, he will follow a similar course in the more serious walks of life. If a trickster in his play, he is likely to carry it into his business.—C. W. Whitney, in *Harper's Weekly*.

Prince Didn't Sell the Race.

Jack Prince, in a note to the REFEREE, denies that he sold a race at Springfield, Ohio, on which a bicycle agent had made a bet of \$500. He wants to know who ever heard of a "poor, white amateur bicycle agent betting \$10, let alone \$500." He claims to have ridden twenty-nine races against horses this season, twenty-six of which he won.

At the annual fall athletic meet of Amherst College last week Wednesday, the one-mile safety event was won by Barnes, '95, in 3:20 1-2; Law, '95, second and Burnham, '95, third.

News From Rochester.

ROCHESTER, Oct. 24.—Once more the delegates to the Rochester Wheelmen's League have cast off the armor of jealousy and have all put their shoulder to the wheel, as it were, for better legislation in the association.

The bitterness which had prevailed so long was not washed away until a few evenings ago, when the Genesee Club withdrew its resignation; the removal of the old secretary was made and a substitution of two delegates was necessitated. As a result, harmony and unitedness is the rule, and now the members are better organized to advocate plans for the advancement of cycling in the city. A meeting was held last Wednesday evening in the rooms of the Rochester Athletic Club, when business of a constructive nature was transacted.

That dreaded disease, known extensively among the cycling and other organizations as dissatisfaction and mismanagement, has been contracted by the West End club with fatal results. The disease attained such malignant proportions that the patient succumbed last Thursday evening, and the burial occurred a few days later. So what was once one of the largest and most dignified wheeling clubs in western New York has now passed into oblivion.

The Ramblers' entertainment committee is hustling, and a pleasant time is anticipated for the cold nights. A theater party is the first event on the programme.

PANHANDLE.

Elections at Grand Rapids.

GRAND RAPIDS, Mich., Oct. 22.—Elections are thicker than hops for the G. R. B. club; it has three different elections at present. First comes the club election on Nov. 1, then the presidential, and during this time the division election is brewing and will be decided Nov. 15. The nominating committee of the club has just put two tickets in the field, both of which are good. The candidates on the first are: President, J. H. Taylor; vice-president, Dr. C. H. Hold; secretary, C. W. Mangold; treasurer, C. E. Richmond; assistant treasurer, Morris White; directors, W. B. Folger, H. W. Stebbins, James Steward, E. P. Crozier, H. L. C. Hall; captain, P. S. Hunt; first lieutenant, W. E. Dyer; second lieutenant, George Andrus; color bearer, George Chase; bugler, W. J. Gouldsbury.

The other ticket contains these names: President, H. W. Stebbins; vice-president, Frank Escott; secretary, Frank Heath; treasurer, P. S. Hunt; assistant treasurer, F. V. Garrett; directors, A. B. Richmond, Fred Denny, R. B. Hain, Leo Andrus, W. S. Turner; captain, J. H. Taylor; first lieutenant, W. R. Simmons; second lieutenant, A. I. Saliers; color bearer, F. S. Gilbert; bugler, W. S. Van Amberg.

The club will give a fine athletic entertainment on Thursday night.

Tuesday night Miss Cora Stebbins will entertain about fifty of the club, at her home, with pedro and dominoes.

QUI VIVE.

Buffalo Cyclists Busy.

BUFFALO, Oct. 24.—The Press C. C. has reduced its entrance fee from \$5 to

\$3. Just why this was done no one knows. We always thought the Press C. C. was the largest league club in several states, and its membership roll of such size that it could weather it through the winter very nicely; but it seems that they are after more members and are in need of their dues to make their expenses balance. The committee of arrangements for the grand ball to be held at Music Hall soon reports everything in good shape for a successful issue.

One afternoon last week W. H. Pensingers, of the B. A. C., made a new mark over the Corfu course. The record was previously held by F. C. Fuhrman, of the Ramblers, at 3 hrs. and 10 min., but it is now reduced to 2 hrs. and 50 min. by this latest effort. This course is becoming the "proper thing" to tackle for record. The brothers Buse, on their tandem, made the fifty miles in 2 hrs. and 45 min. a day or two after Pensingers. Pensingers holds the fifty-mile straightaway record at 2 hrs. 11 min. 30 sec., made Aug. 1, 1891, at the time of the Press-Rambler road race. Speaking of the Buse brothers, we are reminded that these boys are doing some very fine riding on their tandem, and are in good condition, giving their friends some idea of what may be expected from them next season, and they certainly are able to fulfil all expectations.

Centuries were made by nearly all of the 100-mile runners yesterday, as the roads in this neighborhood were in good condition, and the fine state of the weather was such that the opportunity could not be passed. Among those who made these runs were Foell, of the Press C. C., who finished his thirty-second century for the season; F. F. Klipfel, of the Ramblers, making his twenty-fourth; also Cleveland and Buss, of the same club, each added another 100 miles to their records. Yesterday saw several of the Buffalo B. C. club members out for a run, and they showed that, although not so prominent as some of the other clubs in affairs of the road, they are still in it when the occasion demands or they feel like it. This club has arranged a good programme of winter amusements, and will see that it is carried out with careful attention to the least of the details for the comfort and gratification of its members and their friends.

If a pleasing programme, a full house and perfect satisfaction at the conclusion of the evening's amusement constitutes a successful event, the Ramblers were right in it. A schedule of boxing and boxing events had been arranged and was most evenly carried out, terminating in a burlesque fight between two of the club men disguised as noted pugilists, which fairly took the audience by storm, and produced no end of hilarity and fun. This last was quite a novel idea, besides being something new to this part of the country, and is deserving of considerable praise. The gymnasium of this club is to receive several new pieces of apparatus, and the work, which is to begin in it at once, will be under the personal supervision of Instructor Brunner.

WILLIE DUNN.

Vice-President Follansbee, of the Garford Manufacturing Company, is in Boston showing '93 Garford saddles to the New England manufacturers.

It is reported that the Pope Manufacturing Company spent \$243,000 in advertising last year, and that the profits of the business were not far from \$700,000.

ZIMMY AND SANGER NOT MATCHED.

There Was Talk of Such a Thing, but That Was All.

The cycling public in general, and that of Chicago in particular, has been thrown into a state of excitement over the report that Zimmerman and Sanger were to ride a series of races for a prize of \$1,000 a side and a side bet of \$20,000, or something like that. Several daily papers in Chicago came out with "scare heads" announcing all this, when as a matter of fact there is not a particle of truth in the story, and once again the cycling scribes of the *Post*, *Tribune* and *Inter Ocean* have "fallen down." It came about in this manner. P. H. Sercombe, of Milwaukee, whose wheel Sanger rides and is shortly to sell on the road, was talking with several others about the relative merits of Sanger, Zimmerman and others. Sercombe said Sanger could beat any man living and offered to bet \$500 that he could. Troy and Zimmy were both within hearing and immediately jumped up. Zimmy said he could get fit in ten days and assured Troy he would ride against Sanger if the stake were large enough. Troy said the Jerseyman would not consent to go south and train for such a race unless the stake was at least \$1,000, for half that amount would be eaten up in traveling and training expenses. But he was willing to put \$1,000 on Zimmy and *Sporting Life* had plenty more if necessary. That was the last heard of the Milwaukee bluff, and it is not at all probable that a match will ever take place. The *Tribune* had this to say:

Mr. Sercombe evinced an anxiety to have the match come off at the Exposition Building track in Milwaukee. It would never do, for the track is something like ten laps to the mile and anything but speedy, though it would be good enough for a spectacle. If either man should elect to have a good, stiff race, a first-class track would be the prime requisite. If it is to be a series of loafs and final dashes, the matter might as well go to Milwaukee as any place else. But there is an imperative demand for speed, uniform speed, and that can only be obtained on a half-mile or a mile circuit. It is proposed to set a time limit of 2:26 on the mile event, a limit of 5:00 on the two mile, and a limit of 13:00 on the five-mile race. This would net something worth witnessing, give full opportunity for head work or track science. Even pacemakers might be allowed to insure remarkable speed from these remarkable men. Several small bets and one or two considerable ones were recorded yesterday at 2 to 1 in favor of Zimmerman. The betting is done on public form, Zimmerman having a record of a flying start mile in 2:06 4-5, as against Sanger's 2:10. But then the Milwaukee man never had the advantage of his great rival. At two miles Zimmerman without a peer until the other day, when Windle displaced his record. Windle also effaced his five-mile record. So on public form Zimmerman is entitled to the call in the betting, for Sanger holds no records.

The above is nicely gotten up but there are no facts about it; it is merely the work of a reporter who was compelled to serve up some news in the cycling line. We have great respect for Sanger's riding ability, but we miss our guess if Zimmy couldn't cross the tape twenty yards ahead of the Milwaukeean in a mile race. It must not be forgotten that Sanger did not dare take up Barrett's challenge for a series of races, and Barrett is by no means the equal of Zimmerman.

THE MILWAUKEE SIDE OF IT.

MILWAUKEE, Oct. 25.—Mcney to bet on Sanger, should the race between he and Zimmerman be arranged, is as plentiful in Milwaukee as the most enthusiastic sport could desire. From many sides comes the assurance that Sanger's friends are legion, and that they will not be afraid to back their convictions that the Badger boy is the peer of any wheelman of the universe. He has advanced in one season from almost obscurity to a leading position among the representative racing men of the world. The friends of Sanger are endeavoring to

arrange a series of races between he and A. A. Zimmerman. As an evidence of their integrity in the matter a forfeit of \$500 has been deposited by P. H. Sercombe and F. H. Bolte of the Sercombe-Bolte Manufacturing Company, with the sporting editor of the *Chicago Tribune* as part of a stake of \$1,000 (in the form of a trophy) to be contested for. Mr. Sercombe states that they have no choice of tracks, and that they will be perfectly satisfied with the surface of any track selected.

It may be the opinion in some quarters that the talk about a race for the championship of the world between Sanger and Zimmerman is only a bluff and an advertising scheme, but I am informed by the Milwaukee parties interested that they are in earnest and mean business from the word go. The Milwaukee people claim that the matter was pushed onto them and they have accepted the challenge with the avowed purpose of seeing it through, cost what it will.

A Sad Occurrence.

The team race of the South End Wheelmen on Columbus day at the Point Breeze track were marred by a sad occurrence. The race was between two teams chosen by the two lieutenants from those entering, the plan being that the team scoring the greatest number of points was to be entertained at supper by the losers. Shortly after the finish of the race W. H. Marriott, one of the riders, dropped suddenly to the ground unconscious. Efforts were made to resuscitate him by those present, and one of the best men dispatched for an ambulance. But efforts were of no avail, as he had evidently expired shortly after falling.

Mr. Marriott was an enthusiastic wheelman, having taken up the sport some three years since by advice of his physician, who said that he could not live long unless he took some active exercise, being subject to the disease which caused his death—heart failure. On this account and because of his age (52) he was never known to over-exert himself, and while riding in this race he did so only for amusement, starting and finishing last, making no effort to do more, his only idea being to be eligible to the festivities which were to follow. Mr. Marriott was an ardent supporter of anything connected with cycling affairs, an esteemed and popular member of his club, of which he was one of the board of directors, and was the father of F. B. Marriott, one of Philadelphia's fastest riders. He was a prominent down town business man.

Bert Myers to Wed.

Bert Myers, the well-known racing man, is about to take unto himself a better half; in fact by the time this paper goes to press the affair will have taken place. The lady is Miss Grace Hazard, daughter of S. B. Hazard of the firm of Rouse, Hazard & Company. She is one of Peoria's four hundred and is held in very high esteem by all who have the pleasure of her acquaintance. The wedding is booked for Wednesday evening, Oct. 26.

Nancy as a Trade Mark.

The McIntosh-Huntington Company has been granted a patent on a trade-mark, a cut of which is shown herewith. The trade-mark is to be used on bicycles and articles accessory thereto. The trade-mark is No. 21,873, and was registered at the patent office Oct. 18.

THE MORGAN & WRIGHT TIRES

Have now been before the public for one year, and it is upon the record which they have made on road and path that we must base our claim to further patronage. We trust it will be remembered that we have never made exaggerated claims for our tires. As we have always held the opinion that such claims, in the present state of the art, would be premature. We are still seeking improvement in our tires, and have the satisfaction of seeing those we have made during the past year imitated and copied by a number of makers whose ideas as to what constitutes a good tire have not in the past met with public approval. We have seen letters and heard trade arguments put forth by our competitors, who are now copying our tires, to the effect that they are using better material and making better tires than we can produce. We are perfectly willing to leave these claims to the test of time.

We ask our friends and patrons, however, to consider carefully these claims of superior quality and material. The selection of material for the **Morgan & Wright Tire** has been the work of over a year, and after innumerable tests in our factory and on the road, we have made such changes as experience has shown to be needful. During the past year we have made all repairs free of charge, and this has enabled us to learn from the experience of thousands of riders throughout the United States the weak points in our tires, and the public can rest in confidence that we know more about the quality of our goods and what is necessary to produce a perfect article than competitors who simply copy our methods and depend upon the stretching of a SAMPLE of rubber, before the eyes of a customer, to convince that they have more ability as rubber manufacturers. The head of our concern has been an experimenter in rubber fabrics for twelve years, and the business of our concern has been built up from very moderate beginnings, under the pressure of necessity. We do not claim superiority over every one on earth, and we are still experimenting, as we wish to keep up with the times. We shall never descend to detraction of the goods made by others; and what we have to say is in self-defense, against trade arguments being used by competitors, which, should they appear in public print, would give good grounds for an action for libel. We can assure our friends that we use the best material obtainable, that we shall improve our tires just as often as experience points the way, that we have manufacturing facilities and abundant capital to fulfill all our contracts, and with this we know we shall receive all the patronage which our product may deserve.

We have applied for patents on our tires and have every reason to believe that our work of the past year has discovered patentable features, and that our claims to such will be allowed.

All tires made by us after November 1st will be branded with our firm name and be marked "Patent applied for."

MORGAN & WRIGHT, CHICAGO.

STARLEY ON THE TRADE

THE WELL-KNOWN ENGLISH MAKER
GIVES INTERESTING FACTS.

American Cities, He Thinks, Are Immense, but Chicago Leads All—Condition of the Market—The Safety and Geared Ordinary.

This is my first visit and my first acquaintance with America, and although I had formed an idea that you were very advanced in many ways, and that for energy, ability and intelligence in the pursuit of productive enterprise there was very little to be desired, I am bound to confess that I am astonished at the wonderful strides that have been made. To an ordinary Englishman who has not visited your country it is difficult to conceive without personal observation just what position you are in. I had, of course, formed impressions as to the general character of the Americans from coming in contact with them in England and, generally speaking, had considered that one of the marked characteristics was this—that they looked ahead and set a value upon prospective possibilities, whereas we in England are more likely to judge of a thing by its past. The former has always seemed to me to offer advantages in many ways, though it also has its disadvantages. For instance, they may open to receive anything new, that speedily becomes a thing of the past; whereas in England, although it may take in many cases a long time to take up anything new, it may be a long time before the thing that is taken up is found useless and is discarded. It is astonishing to me to find how quickly your knowledge is circulated through America. Although it is such a vast country, it seems remarkable to what extent any new idea or thought that is known the community in one part of the country is made known to the other, and how quickly the new idea is grasped.

CHICAGO LEADS ALL.

One can not help feeling impressed as he enters New York harbor of the general style of the city. Also its busy ways and large buildings, together with the very handy, though, to our way of thinking, unconventional manner of conveying passengers by the elevated railway, are all very striking features. The tall buildings also are quite astonishing. The unconventional is further illustrated by a trip to Washington, a city totally different to New York, and one which has many attractions. But for energy and growth and for wonderful strides, Chicago seems to be decidedly ahead. When I visited the French exhibition and saw the perfect manner in which all details were carried out in connection with the buildings and the surroundings of the buildings in the grounds of that exhibition, I was strongly of the opinion that no other country could work up so perfect a sight as the French, but I am bound to say that after a visit to your World's Fair it promises to become far greater than anything else ever yet done. It is really astonishing, and no one can form an opinion of it unless they see it.

With regard to the trade in America, although I think there will be a good demand for English bicycles for the next year or two, I am of opinion that it will not be many years before you will make nearly all the machines you will require for your use. More especially will this be so when the cycle becomes an established form of machine, as your method of production are much more thorough than ours, and where the form and de-

tails become established so that a quantity can be made you will have a still further advantage. But while our principles of production in many instances are not so thorough as yours, they admit of changes without loss, and enable us to adapt ourselves to altered circumstances more readily than does your system of producing, and hence it is, while the bicycle in form and detail is subject to change from time to time, we shall always have a certain advantage. Apart from this, the industry having been established longer in England, we manufacture more parts, which is an additional help to us, we also control the fashion, which is also in our favor.

IN THE BUSINESS TWENTY YEARS.

I find it was just twenty years last May since I entered the cycle trade, and since that I have seen a great many changes. It is incalculable the number of forms the various parts have taken from time to time, and the improvements or supposed improvements that have been made in them. Then apart from this, there has been seven or eight distinct forms. The first bicycle was, of course, the hobby horse. After that came the bicycle worked with pedals, attached to cranks driven from the front wheel, which has had such a long run, and which is to-day known as the ordinary, I presume in consequence of having been the first form of bicycle that took the public taste. Some few years

fully warranted in the estimate we had formed as to its advantage by hearing constantly of riders who were able to ascend steeper grades than they had ever been able to before, either on a bicycle or tricycle, which fully proved that our estimate was a correct one. It had always seemed to me an omoly that a tall man should ride a high wheel and a short man a low one, as in the case of the ordinary bicycle, and that the distance he sat from the ground was determined by the length of his legs, for in some instances a short man is stronger than a tall one and has quite sufficient power to impel a large machine if he could only reach it, and with a geared-up machine this can be regulated beside. It is quite clear that the nearer one sits to the ground the less he is affected by wind pressure, which is a serious item under certain conditions. In addition to this, with the ordinary bicycle in going up hill the weight is distributed over the two wheels, and a larger weight placed upon the back wheel than when going along a level road, which is distinctly the reverse of what is desirable, and the same principle applies to the geared ordinary. I am strongly of the opinion that the geared ordinary is a step backward and not a step in advance. There are some riders who require a change, I fully admit, but I think the general public will be slow to take such a machine. Indeed

The Winton Triplet.

The Winton triplet, upon which Banker, Merrill and Winship broke the records at Washington Park Saturday, has thirty-inch wheels, one and three-quarters-inch front and two-inch rear tires, six and a half-foot wheel base—nine feet over all—seventy five pounds in weight, eighty gear, special anti-friction chain gearing, and sprocket steering arrangement. The wheel is splendidly braced and the riders obtain the same position as on a single wheel.

after this the tricycle was made in such a form that it could be ridden with less fatigue than was caused by walking, and for several years this came in for a fair share of attention until it became a very perfect machine. But it was found inconvenient to store it. Nevertheless its safety had induced many to ride the tricycle who would never have ridden the bicycle. To get over the difficulty of storing, a bicycle known as the Facile was introduced, and had a very good run on account of its safety. This soon led to the introduction of a machine known as the Kangaroo, and that in turn made way for the Rover. I often think it is our pity that in order to distinguish it, its should have been termed a "safety," for although it was safe, that is only one of its good points, and in introducing the Rover, although I was quite alive to the value of the safety of the machine, it was certainly not the cardinal point I had in mind when I introduced it, but rather this: I felt confident there were principles in cycle construction that had, up to the time of the introduction of this machine, never been obtained, and I felt confident that there was still a valuable force that had never been utilized before, and it was to obtain this force that I placed a man on the bicycle in the position I did.

SOON LEARNED THE GOOD QUALITIES.

It was not many months after the introduction of the Rover before we were

I feel convinced that for middle-aged riders there will be very few who would care to change from a rear driver to such a machine. Not only do I believe it is not a bit faster, if so fast, as the rear driver, but I believe the tendency to distribute the weight between the two wheels instead of bringing it almost entirely upon one, as in the case of the Rover, is a wrong one. In addition to this, I do not think it is possible that any kind of gearing can be made that will run so easily as a chain, which, provided it is kept clean, is one of the best means of connection that it is possible to make. That it is open to serious objection at the present time there can be no doubt, as being near the ground and exposed to dust and dirt, it can not, of course, work perfectly, but cover it in with some dust-tight cover (oil-tight, if preferred) and it would be perfect. I don't think any first-class machine will be considered complete without it.

MAY BE RIDING ONE WHEEL SOON.

I think the only thing that makes a geared ordinary possible is the pneumatic tire. As I have already expressed my opinion of this tire, it is hardly worth while to mention it here. When the bicycle was first introduced it was looked upon as rather an accomplishment to be able to balance upon two wheels, but to-day it is regarded as a matter of perhaps two or three hours' practice. I am strongly of the opinion

that the time is not far distant when it will be regarded as a great advantage to ride almost entirely upon one wheel, and with this idea in mind, I took out a patent about a year ago for a bicycle, for which I registered the name *bunicycle*, which combines as nearly as possible the words *bi* and *uni* cycle as I could claim, and it was intended to convey the idea that although it was a bicycle, in effect it was a *unicycle*. I am strongly of the opinion that it will not be long before the advantage of such a machine will be fully realized. The fact that riders have during the last year or two found it better to sit well back over the rear wheel proves that the machine runs more easily when they are placed in that position, and I think when the additional advantage of a spring is obtained in such a manner that they will be still more isolated from the vibration set up by the uneven surface of the roads, such a machine will be regarded as the best, so that apart from the mechanical details there is a distinct difference in principle between the rear driver and the geared ordinary. One distributes the weight over the two wheels, especially uphill, while the other carries it almost entirely upon one, and I think there is no doubt that the latter will prove itself the best in the end.

TRADE WILL BE MORE DIVIDED.

I see no reason to think there will be less demand in England and Europe generally than there hitherto has been. In consequence, however, of so many makers starting up during the last year or two, it will be much more divided than heretofore. There is, however, one feature that is most marked, and that is the almost universal desire for one form of machine. At one time many makers used to claim it as an advantage to make a large number of patterns, but that would not be considered an advantage to-day, as the form seems very clearly established. Since the introduction of the pneumatic tire we have had to depart from all former ideas of strength, and are now enabled to make machines that we should have considered quite unsafe to carry the weight of a rider a few years ago. There can be no doubt that a machine fitted with a pneumatic tire can be made ten pounds lighter, at least, than could have been made when the small solid tire was used. There is, however, a medium to all things and I am strongly of the opinion that, although for a light expert rider, who is within easy reach of a repair shop, a machine can be made that will carry him over ordinary roads safely, to weigh not more than thirty pounds; that a similar machine, weighing thirty-five pounds, would be found to be a better weight in the end, and for ordinary touring purposes and for riders over middle weight, a machine weighing forty pounds complete would not be too heavy.

MAY NOT MAKE GEARED ORDINARIES.

We shall not make a geared ordinary unless circumstances prove it to be decidedly a superior machine, which we think is not likely to occur. We shall confine ourselves to what we conceive to be the best machine that can be made, and not engage in the trade for anything that may only last a brief season. One of the greatest charms of the ordinary was the ease with which it was steered, but this is entirely lost where the wheel is geared up to revolve faster than the pedals, and the fact that a gear cannot be made to run as easily as a chain, and bearing in mind that no spring can be used in connection with the geared ordinary to lessen vibration, will tell much against its chance of becoming popular to any extent. In addition, it has this almost fatal drawback: You cannot place

"THE BEST"---THE SYLPH.

—It's a SPRING FRAME SAFETY with the spring in the right place—Directly Under the Load—

"Sylph Cycles Run Easy!" Their riders say, so say we. All who try them are surprised at the EASY RUNNING QUALITIES and when they take a spin over a rough road or pavement, are still more surprised at the EASY RIDING QUALITIES. No bumps, no jars, but complete pleasure and comfort—features not noticeable in rigid or any other spring frame machines. There is no loss of power to rider, and the frame is rigid in every direction (except up and down). Others have discovered the merits of SYLPH CYCLES. Try one and you will discover them also.

the handles far enough forward without making the steering very erratic. Before the introduction of the Rover, the difficulties of determining the position of the handle was a serious one to contend with, and for a long time I was in doubt as to where it should be placed, as it seemed to me that to sit behind the axle of a wheel and apply a downward force to the pedal five or six inches in advance of the axle and have the handlebar behind the axle also was a mistake, and I had almost arrived at the conclusion that whatever distance the rider sat behind the crank shaft, the same distance forward of it was the right position for the handle to be placed if he was to be able to exert all his force upon the pedals. It was to obtain this position that compelled me to adopt the form of machine now in use, to enable riders to sit further over the pedals than would be safe on any other machine. I do not think the importance of the work of the handles was realized until the Rover was made. It was with the introduction of this machine that I bent the handlebar backward and sloped it downward. The handles were confined to two kinds—the straight handlebar with pear-shaped handles and the one known as the gimlet handle. It seems quite clear by the universal adoption of the present form of handles, with two slight modifications, as to the curve, etc., that I was quite right in my forecast as to its value.

THE EXTENDED WHEEL BASE.

I think there is a proper position in which the rider sits relatively to the back wheel, and that if his position is to be maintained a tall rider will require the crank shaft further forward than a short rider to equalize the difference in the length of the leg. I think a short rider will do as well without any extension of wheel base; but with a tall rider it is different; with three or four inch extensions he is simply equal to the short rider without it. I can not see any advantage other than this. I do not favor the present form for riding? By no means; I think to lean over doubled up, for ordinary riding, is quite a mistake; while I believe for rapid speed it is right and necessary. I am decidedly of the opinion it is as distinctly wrong for ordinary riding and will have a bad effect upon those who indulge in it to any extent. I would not advocate bringing the handlebar back, but rather that it should be raised until the rider can sit upright, which is the most natural and best position in which to ride. Cycling is a distinct gain to the many methods of locomotion by which the world keeps going, and to those who indulge in it temperately it forms an exhilarating and healthy pastime. It offers without undue fatigue twice to three times the speed of walking, which is quite sufficient in itself to commend it thoroughly to Americans, in addition to which there is a charm in the smooth, gliding motion that can be obtained in no other way, and provided discretion is used in obtaining the right position for riding, that the proper speed is ridden, it will be found an inestimable boon.

J. K. STARLEY.

The Lincoln Cycling Club indoor ball team played its first game Wednesday evening at Irving Park. J. M. Erwin has decided to accept the management of the team and will, with the boys' help,

land it well towards the top or nowhere. Fred Tilt is captain, Slusser pitcher and Crouse catcher, the other players including Short, Niesz, White, Walton, Braun and other leading lights.

Employees of Morgan & Wright, the tire manufacturers, have formed a cycling club.

The Cycle Signal Corps, of Denver, Col., in Chicago to attend the dedication last week, was a neatly-equipped body of young men, thirty in all. Among the number were several of note. John S. Filmous was captain; W. A. Wilson, first lieutenant; B. H. Merchant, second lieutenant; sergeants, W. L. Spring, Horace Gray and Johnson, and corporals, John H. Kellogg, George E. Smiley, Whipple and Skinner; privates, F. Sperry, Crawford, Adams, Smith, George Apple, Taylor, Dougall, Zollars, Mack, Waybrecht, Lewis, Tom Dillon, W. Wyeth, Charles Waughwant and F. Clark.

The constitutional committee of the Century Road Club met at Winter's last Tuesday evening for supper, and thence proceeded to Mr. Gerould's office, where the constitution and by-laws were read and prepared for presentation to the club at a meeting called for next Tuesday evening at the Grand Pacific. Everything is in good running order, and before another week the C. R. C. will be in good running order, tickets mailed for an election, and the greatest road club in the world launched upon what is sure to be a great career.

The Chicago Cycling Club indoor ball team will miss those sterling players, Lumsden, Tober and Anderson, this season. The first two will be found with the Kenwoods, and the latter with the Carletons, in the Midwinter League. The Chicago team as formed is as follows: Henry Bingham, pitcher or catcher; Joe Clare, second base; Ben Becker, left field; Rob Brooks, short stop; J. P. Bliss, short stop; C. W. Davis, first base; Joe Card, pitcher or catcher; A. J. Nicolet, third base; W. B. Young, right field or catcher.

Sunday, Oct. 16, Miss Lucy Porter rode her seventh century, accompanied by Ed Porter, whose thirteenth century it was. To Aurora and Joliet, returning via Blue Island, was the course covered in thirteen hours. Miss Porter has ridden six centuries this season. Miss Heggerty also rode a century over the same course on the same day, her sixth bar earned and fifth this season. These two ladies rank as the leading long-distance riders of America, and so well trained are they now that a century is but a circumstance, and neither one admits that she is in any manner injuring herself. Each had ridden a century over the Elgin course only the Sunday before.

The Lincoln Cycling Club has issued a schedule of attractive social events from Nov. 5 to New Year's eve. On the evening of Nov. 5 a Japanese smoker will be given at which only Jap costumes are eligible, and a rice eating contest, free for all, occurs. One week later an informal smoker occurs, at which each must "sing a song, tell a story, dance a jig or lose a button." Nov. 19, a band concert, L. C. C. band; Nov. 26, Escen and Ranchen, whatever that may be; Dec. 3, another characteristic smoker, this kind called a Pumpkin smoker; hayseed costumes only, and a pie-eating contest for prizes, no handicaps for age, sex or previous condition of servitude; Dec. 17, some more "Essen and Rauchen;" Dec. 24, musical smoker; Dec. 31, banquet and second annual run of the midnight wheelmen, the old year out and new year in. To this run cyclists of the city are invited.

To Handle Quintons.

Mr. Gordon, of the Quinton Cycle Company, writes under date of Oct. 12 that they have made full arrangement with the Bretz & Curtis Manufacturing Company to handle the famous Quinton Scorchers in large quantities for 1893. Mr. Curtis, who has been in England for some time, sailed for home on the City of Paris. The contract between the two companies is such that the manufacturers are bound to make early deliveries. When Mr. Gordon came to America last year he made a deal with the Bretz & Curtis Manufacturing Company, promising early delivery. The company lived up to its contract and the assurance was that the American agents were able to fill orders and to guarantee delivery on certain sales. Mr. Curtis assures us that last season's trade was a good one and next season will be largely increased. The Quinton wheels are up to date and the '93 design, a cut of which was recently published in the REFEREE shows a very handsome wheel.

Represents Bayliss, Thomas & Co.

H. Hadden, representing Bayliss, Thomas & Company, spent last week in Chicago, and closed with J. Hoyle to

handle the Excelsior for the states of Illinois, Iowa, Indiana, Michigan, Minnesota and Missouri. The contract is an important one, and it ushers into the cycling world another importer. Mr. Hoyle is, however, well known in this city, having carried on for the last two years a very profitable repairing business, also as an agent for the Excelsior through the Sweeting Cycle Company. The wheel is a good one and will no doubt have a large sale. Mr. Hoyle will, as soon as samples are received, send out travelers.

Eastern Trade Affairs.

NEW YORK, October 25.—Robert Willis, of London, the president of the English Ormonde company, and a brother of E. J. Willis, of the American Ormonde company, is in New York. Mr. Willis is young in years, but old in cycle trade wisdom, so Messrs. Bridgeman and George S. McDonald declare. The Londoner is barely twenty-five, but is an encyclopedia in regard to the trade, and, as McDonald says, one of the most far-

sighted men he has ever met. Mr Willis came over for three purposes. First of all he wanted to see his brother; then he wanted a rest, and he also wanted to find out how the feeling regarding further trade runs in America. I had a five-minutes' talk with the Britisher on Warren street, and at the Ormonde company's place the other day. Condensed, here is what the young man said: "Trade is bad in England, prospects gloomy enough, and the whole trouble has been brought about by over-production—too many starting in the business, which swamped the market. Seriously enough, we have arrived at the conclusion that to other fields rather than to our own local one, we must in future look for our trade. Although only having been here a week I can feel the pulse of trade beating with a vigorous beat, which contrasts greatly with the weakness of our home trade. The future looks bright here, and I hope America won't overdo the thing in manufacturing, although it is sure to come to that sooner or later.

GENDRON'S NEW SULKY WHEELS.

Peter Gendron, of Toledo, was in New York this week, and told the REFEREE about some new safety wheels his concern, the Gendron Wheel Company, is building, which the genial Toledian thinks will greatly assist the gee-gees in annihilating time. He has just made two pairs of wheels 52 and 54 inch, of wire wheels, ball bearings, and one and a quarter inch cushion tires, with five-eighth inch holes, the walls being five-eighths of an inch thick. Gendron thinks the cushion is faster than the pneumatic for trotting purposes, and to get the best results the greater the speed the better. He figures wind resistance and surface contact as being four seconds in favor of his idea, and says many of the western trotting sports are in line with him. Gendron is anything if not practical. Secretary Vogel, of the Gendron company, is about to break in a pair of elks and drive them to the Gendron ball bearing, cushion tired idea, using a four wheeler.

BOUGHT A GOOD PATENT.

E. J. Phelps, of Phelps & Dingle, called on the REFEREE to say that he has just purchased an important patent, the Frederick Shroder, No. 466,517, issued Jan. 5, 1872, same being applied for Dec. 30, 1891. This, the firm says, antedates every other for a clamping device. The claim is a broad one, as follows: "Claim 2. The combination of the U-shaped tire, the fellow, an inflated tube confined by said tire, and an internal clamping device between which and the fellow the U-shaped tire is secured, substantially as set forth," etc. Mr. Phelps called attention to an error made in timing him recently at Passaic in removing the tire and exposing the inner tube. "The outer tire was removed and the inner tube exposed in fifteen seconds, and the whole replaced ready for inflation in forty-eight seconds."

TO HAVE LARGER QUARTERS.

The Anglo-American company has found its present quarters much too small for the large and wonderfully increasing trade in parts, so it will move on the first of November to 213 Pearl street, where nearly the whole of a large and commodious building will be occupied. This company now does business with nearly every manufacturer in America, and has built up its present

SALADEE'S PATENTED INTERNATIONAL STANDARDS

For the UNITED STATES, CANADA, ENGLAND, FRANCE,

W. E. AUGINBAUGH,
McGill Bldg. 908, 24 "G" Street Washington, D. C.

connection by selling reliable goods at the right price, and giving constant watchfulness and promptness in business relations with customers. Messrs. Perria and Friedenstein are two hustlers hard to beat. A large cargo of tubing arrived for the firm last week.

ONLY ONE SMITH.

Howard A. Smith & Company, of Newark, N. J., have, in Crondel and Kirkpatrick, two lively people who never lose an opportunity to advance the interests of their firm, be it in a talk with a newspaper man or with a prospective customer. It has been generally supposed that this lively pair was part of the company, but such is not the case. Writing recently, Howard A. Smith & Company said: "We notice in a write-up in the REFEREE you speak of 'Howard A. Smith & Company, eastern agents.' In future kindly say, 'Newark, N. J.'" There are many Smiths, but only one Howard A. Smith, after all.

THE FIRE-FLY LAMP.

The Fire-FLY pocket lamp, about the size of a stylograph pen, has just been placed on the market by the Trade Specialties Company. George C. Card, the manager, thinks the little lamp will catch on with the cyclists. The idea is simply this: The cylinder is fitted with oil and wick in one end and 50 small explosive caps are fitted in the other, which unscrews. A pin or hook is used for igniting the caps which lights the lamp wick, which can be used to light the cycles lamp, gas or cigar. A thousand extra caps, for ten cents, goes with the lamp, and 250 are given the purchaser free.

NEW HOWE AGENCIES.

The New Howe deal with Joseph Ketchum & Company, of Brooklyn, fell through at the last moment, over territory dispute, it seems; but the smooth Golder went to work and commenced dividing the territory among other houses, and Amos Shirley, of Eighth avenue, got New York state. Golder has experienced much inconvenience and delay with the customs, and the red tape and formality has lost him much valuable time in getting his excellent goods through the tariff gate, election time no doubt being responsible in a measure for the delay.

ON AMERICAN SHORES.

Among the arrivals from abroad in New York last week was the well known Samuel Snell, of Birmingham; George Curtis of Bretz & Curtis, Philadelphia, and S. Betterman of the Triumph Cycle Company, Coventry. The former will remain in New York for a few days and then go west on a business trip, and will represent Warwick & Son and other English houses as well as the lamp industry. Mr. Curtis shipped to Quaker City and Mr. Betterman will go west in a few days representing, of course, the Triumph.

MISCELLANEOUS MATTERS.

The John Leng Son's Company, of Fletcher street, New York, is going into the tubing and parts business on a large scale. The firm has just received a large-shipment of diamond frames and tubings, also a shipment of parts.

The Gormully & Jeffery company, which had a sort of chattel mortgage on the wheels and office fixtures of Agent Emanuel, recently found it convenient to close up its account with the young man, so the REFEREE is informed.

The well-known Sydney Bowman has just bought out the interests of his partners, Collins and Nuthel, and in future the jolly young vegetarian will go it alone. A bright business young man is Sydney, and he sells and believes in 'blue rims.' Bowman's store is uptown on Eighth avenue.

Arthur Barrows and Percy Stevens sailed for the old country this week, feeling kindly disposed toward Uncle Sam and everybody else. The Coventry men called to bid the REFEREE adieu and stated that the Rudge and Secure would be heard of much in the future on this side of the divide.

The George R. Bidwell Cycle Company will spring something sensational in tires one of these days. Mr. Bidwell and Frank White gave the REFEREE man an exhibition of the merits of the new thing in tires recently, and it is a stunner to all appearances and purposes, but they wished the particulars kept secret until their patents are safe in Uncle Sam's hands.

George Hendee says that Hurlburt Brothers & Company are making great preparations for next season. The wheels this firm will push next season will be the Majestic, manufactured at their Worcester factory, and Mr. Mushing's well known King of Scorchers. The report that Hendee had left or is about to leave Hurlburt Brothers & Company is erroneous. George is apparently satisfied and so is the firm.

Mr. Yost's New Factory.

Ever since the separation of Lozier & Yost the trade has watched the movements of Mr. Yost with considerable interest. Numerous rumors were circu-

lated that he intended locating in California, then Oregon and in various other places, but the fact was that Mr. Yost had gone to California to recuperate before again starting in the manufacturing of bicycles. On his return to Toledo a new company was at once formed and called the Yost Manufacturing Company, with a large capital. Three acres of ground were purchased in one of the suburbs and buildings put up, and last week the writer was shown through a factory in almost complete running order. The factory is situated on the right hand side of Dorr street, and about a block from the Yost station of the Lake Shore road. Three acres of ground are owned by the company. The railway company has built over six hundred feet of siding for the use of the Yost company, and the arrangements are such that all goods are carried from the factory by the railway company to the freight houses and from there distributed. There are three buildings. One is used for the offices, and is a one-story brick, 48x20, divided into four rooms. The first is used by the book-keepers, the second by Secretary-Treasurer W. F. Dewey, the third by Manager J. L. Yost, and the fourth is set apart for the stenographers and typewriters. The rooms are all nicely furnished and have every convenience. A few yards from this building stands a one-story structure which contains an enameling room 24x36, having three ovens, two 12x12 and one 6x6. The floors are of cement and the walls and ceiling sheet-iron. The plunging room is 16x16. The ovens are arranged for fuel gas, natural gas and coal. The main building was next visited. The machine room is 76 1-2x156 1-2 inside. It is now partly filled with the latest improved machines, which were running to their full capacity. The forge and blacksmith shop, 35x50, contains one trip and four drop hammers, and ten brazing fires, which are fed with natural gas. In the engine room is a 125-horse-power engine and a hundred-horse-power boiler. Enough room has been reserved to duplicate this. This building is 30x40. The tool room contains fourteen machines, and next to it is the draughting room. Before leaving the machine room our attention was attracted to several fine machines made by the Toledo Machine and Bolt Works. One of them was an automatic chain machine. With this the company will make its own chains. Near this was one of the finest rim machines manufactured. The six turning machines were also worthy of notice. Near these was a machine (the only one in use in the country) which would take a bar of cold drawn steel and turn out cones and bushings. Then there were spoke header and threading machines, also one for the turning out of sprocket wheels. Of the latter there is only one

or two in the country. Mr. Yost was thoroughly at home in describing these machines, and wore a broad smile of satisfaction at the hum of the numerous machines on this one floor. The second floor of this large building contains an assembling room, polishing room with ten polishers, finished stock room, plating, coppering and buff rooms. In the construction of these works no expense has been spared and Mr. Yost is determined in his new departure to be in a position to fill all contracts promptly and to have sufficient capacity to increase his output at will. The company has ample capital. We congratulate Mr. Yost upon his resuming manufacturing under such favorable circumstances, and we wish him success. In a few days samples will be in the hands of travelers.

The Philadelphia Show.

The committee in charge of the third annual cycle show announce that it has finally succeeded in making arrangements for the holding of this year's exhibit. The only obstacle in the way was that of the lack of a suitable building, but this has finally been overcome, as the managers of the new Philadelphia Bourse (at the head of which, by the way, is George E. Bartol, who, as a member of the Philadelphia Bicycle Club, organized the Associated Cycling Clubs, under whose auspices the shows have been given) have decided to allow

the use of the market-house which now occupies the site on which the mammoth Bourse building is to be erected. This building contains some 37,000 square feet of floor space, being about the size of the Madison Square Garden, in New York, and three times as large as Industrial Hall, in which the exhibit was held last season. The show will be opened on January 4, continuing ten days, and a prospectus of the same will shortly be mailed the trade, following the announcement which has already been sent to all manufacturers. The date, as will be noticed, is somewhat earlier than last year, but it is thought will prove fully as satisfactory to exhibitors. The reason for this was the fact that the building could not be secured later. The committee proposes to change the quarters into a handsome show hall regardless of expense, heating it with steam and lighting it by electricity. An office will also be immediately opened in the central part of the city for the transaction of all show business. There now appears to be absolutely nothing to stand in the way of the 1893 exhibit being far superior to either of those previously held, as the fact of adequate quarters having been secured will ensure the entire support of the trade, whose only objection last year was on this score. The Philadelphia show is now looked upon as an annual trade fixture, and the "base imitations" of last year in other cities only served to establish it more firmly in the estimation of those most interested, as the result of the REFEREE's canvass amongst the trade fully proved.

The New Swift Factory.

E. M. Newman, a member of the Lincoln C. C., is completing plans for the new factory of the Coventry Machinists' Company, at Richmond, Ind. There will be four buildings. One will be three stories, 55x250 feet, one two stories, 60x100 feet, another two stories, 40x60, and another two stories, 60x80 feet. They will be of brick, with mill constructed interior. With equipment the cost will be \$100,000.

The New Works Started.

Under date of Oct. 22 the Eclipse Bicycle Company writes from Beaver Falls, Pa., as follows: "We started our works yesterday and have things in good shape, and are about ready to commence with a capacity of at least 1,000 machines per month. We expect to build a very much better wheel this year than ever before, and one that we know will be as good as anything made. If you want to see one of the finest plants in this country, and one that is true to the picture on our letter heads, come down and we will be glad to show you around. The machinery is operated by water power and the buildings heated entirely by steam and lighted by incandescent lamps, the current taken from our own dynamo. We think everything is in shape to do quite a business."

Peoria Trade.

A representative of the Grant Anti-Friction Ball Company, of Fitchburg, Mass., was in Peoria last week showing samples of its new process balls. The salesman in question was Robert Grant and he claims his company has the best steel ball for the money on the market. He managed to secure a number of good orders before leaving the city.

Charles E. Duryea, of flying machine and bicycle fame, has taken up his residence in Peoria. He will superintend the construction of the Sylph and Rudge cycles, which will be built at the new factory recently started here.

F. H. Henning, of Kirkwood, Miller & Company's bicycle department, has gone

east with a full line of Telephone cycles. Before returning home he will appoint a representative to handle this line in the New England states. The past season has been a very successful one for the Telephone, and the outlook for 1893 is encouraging.

The four large jobbing houses in Peoria are at present busily engaged in testing samples of pneumatic tires, which have been put upon the market for 1893, to find the best and be in a position to know what they are buying.

Luthy & Company will continue to handle the Sanspareil for next season. They report a good trade on them this year, and are making extensive preparations for pushing them to the front next season.

Rudge Cycles to be Made in America.

Rouse, Hazard & Company, Peoria, Ill., are announcing their lines for 1893, and that they are going to be decidedly in it is evident from the fact they are to manufacture the world-famous Rudge cycles in this country from finished bearings, forgings, etc., imported direct from the parent factory, while the weldless steel tubing, from the Weldless Steel Tube Company, Birmingham, Eng., will be used throughout. This new arrangement will have the tendency to make the Rudge more popular than ever in

the cheaper and heavier. The other tire can be made to weigh three and a half pounds for racing purposes. The Bidwell company will put these tires on the market at popular prices, and they guarantee the very best Para rubber and will use their own valves, which in the past have given satisfaction.

Recent Patents Granted.

The following is a list of recent bicycle patents, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

481,420, sectional pneumatic tire; Francis Gleason, Philadelphia, Pa.; filed Feb. 27, 1892; serial No. 423,041.

484,492, chain adjustment for bicycle; James S. Copeland, Hartford, Conn., assignor to the Pope Manufacturing Company, Boston, Mass.; filed April 20, 1892; serial No. 429,822.

484,675, vehicle or other wheel; Arthur W. Robinson, Sheldon, England; filed April 9, 1892; serial No. 428,479; patented in India May 20, 1889.

484,681, adjustable seat support for bicycles; George H. Smith, Rhodes; Richard K. Hartley, Chadderton, and Isaac S. McDougall, High Broughton, England; filed Oct. 29, 1891; serial No. 410,233; patented in England March 21, 1891.

484,712, bicycles; Richard K. Hartley, Chadderton, England; filed Aug. 31,

20-POUND RUDGE RACER (RED RIMS).

this country, as the saving in duty will allow R. H. & Co. to furnish these most popular wheels on much more favorable terms. They already have English-made samples in stock, and Fred Patee is now in the east with same, and will, without doubt, do business. A twenty-pound Rudge racer with red rims, illustrated in this issue, will be placed on the market at an early date. It will be heard from several times during the season of 1893.

The New Bidwell Tire.

Frank White, of the Bidwell Tire Company, is now at the Palmer House, Chicago, entertaining a host of bicycle manufacturers in showing the new Bidwell tires. The one that struck us most forcibly was the tire made of cotton fabric with a rubber covering. The two are separate, but when put on the rim they are cemented together very slightly. The peculiar feature about the fabric was that inflating did not expand it, but contracted the tire, and therefore the harder it was blown the closer the tire would hug the rim, and also that the tire could be contracted to fit a thirty-inch or a twenty-eight-inch rim. Another tire had the fabric vulcanized to the rubber covering. The former need not necessarily be cemented to the rim. For repairing, an opening seven inches from the valve is unlaced. The vulcanized fabric tire is

1891; serial No. 404,280; patented in England Sept. 6, 1889.

Trade marks, 21,873; bicycles, velocipedes and accessory articles; The McIntosh-Huntington Company, Cleveland, Ohio; filed Sept. 17, 1892; essential feature, the representation of a horse and the words "Nancy Hanks."

The New Garford Factory.

The Garford Manufacturing Company, Elyria, O., writes: "The new factory is fast approaching completion, and will be under roof within the next ten days. Contracts for machinery have been placed in the main. The engine and boilers are being put in, and before a great while we shall expect to see smoke issuing from the new stack. Nearly all of our machinery is to be automatic. Our capacity in the present factory it is estimated will be at least 1,000 saddles per day. Present contracts, however, indicate that even this capacity will be more than pushed next year, and negotiations for increased facilities are already under way."

Increased the Stock.

The Toledo Bicycle Company a short time ago decided to increase its capital stock, and last Wednesday the last of the new stock had been taken by local capitalists. The company is now in a

E. C. MEACHAM ARMS CO.

—CAPITAL PAID IN, \$300,000.—

SEND FOR CATALOGUE.

ST. LOUIS, MO.

position to increase its capacity, which is being done at this writing. W. C. Brewer is the new manager and since assuming the management has infused new life and energy into the work. The spring safety will not be pushed, but in its place 100 twenty-four pound racers will be made, and for the regular stock there will be a thirty-three pound scorcher with a forty-five inch base, ten and a half inch head and twenty-eight and thirty inch wheels. The roadster will weigh thirty-eight pounds. We are able in this issue to show illustrations of the Dauntless, both ladies' and gentlemen's. For the 1893 trade the Toledo company is able to show an empty warehouse, having sold all of the 1892 stock, and now with a capital stock of \$200,000 the Dauntless will be heard of throughout the country.

Chicago Trade Jottings.

Prince Wells was in town last week. Mr. Hughes, of the Quadrant Cycle Company, is still in Philadelphia. The T. D. Gause Cycle Company expects to carry over very few '92 wheels.

Martin Rotier, editor and proprietor of the *Pneumatic*, Milwaukee, called Thursday.

W. W. Kenfield, of the Rochester Cycle Company, was in Chicago last week.

With several of the houses trade remains good, a wheel or so being sold every day.

Considerable capital has been added to the Illinois Cycle Company, of which H. J. Winn is president.

The Gormully & Jeffery company has now gotten to where it can attempt to fill orders for G. & J. tires for the English market.

F. Howard Tuttle leaves Nov. 1 to enter his position with E. C. Stearns & Company, for whom he will travel in the northwest.

It is rumored that Fred Patee is to join the Chicago forces as manager of a large retail cycle establishment to open in the spring.

Mr. Blake, representing Luthy & Company, was in Chicago last week; so also Frank Henning, the popular manager of Kirkwood, Miller & Company.

Charles H. Meade, of the Humber-Rover Cycle Company, will be married Nov. 22 to Miss Catherine McKenzie, at the home of the bride, 423 Fulton street, Chicago.

P. H. Sercombe, of Milwaukee, called last week, and the first thing he did was to hand the clerks a liberal supply of advertising matter. Mr. S. is all business and push.

F. J. Reville, of Boston, has taken R. D. Garden's place as manager of the Pope company during Mr. Garden's absence at Hot Springs, for which place he left early last week for his health.

L. W. Friedberg has established a repair shop at 2760 Commercial street, Ravenswood, where in the evenings he does many jobs for the suburbanites. He is at work on a tandem for his own use.

The Heartly Machine Works, Toledo, is running to its utmost capacity on orders for special machines for bicycle manufacturers. Mr. Heartly spent last week in Chicago and was a visitor at the REFEREE office.

W. W. Kenfield spent the best part of last week in the city, and favored the REFEREE with a call. Mr. Kenfield is president of the Rochester Cycle Manufacturing Company, a concern which has met with considerable success. The agents who handle the Rochester are

among the best in the country. Mr. Kenfield is now in Peoria.

Stephen Golder will be in Chicago this week, so report says.

The Hill Cycle Company, Chicago, was incorporated Monday with a capital of \$50,000. The incorporators are Mr. and Mrs. Hill and Mr. Fowler.

R. S. Beard, of Milwaukee, forwarded to the Coventry Machinists' Company, last week, a case of twenty-four bottles of Milwaukee export beer, in appreciation of the excellent qualities of a Swift safety, ridden by him. Rather an elegant testimonial!

Among the callers last week was Alfred Bednell, of Taylor, Cooper & Bednell, Coventry, manufacturers of the Raglan. Mr. Bednell has closed with his agents in this country for another year, and sails in a few days for home with the satisfaction of knowing that

livery, and at this time of writing 800 have been delivered. The W.-H. Company has booked orders for every one of the thousand. E. R. Larned, formerly with Horton, Gilmore, McWilliams & Company, is now on the road for the house.

Miscellaneous Trade Jottings.

The Ames & Frost factory is finished and machinery is being placed.

It is reported that the Stover company will use Air-Tight tires this season.

The Peerless Manufacturing Company, Cleveland, is hard at work on the 1893 samples.

The B. F. Goodrich Rubber Company shipped a few days ago fifteen hundred tires to England.

A. U. Betts & Company, whose goods were first put on the market through the medium of the REFEREE, report a phenomenal season. Mr. Betts is now

company controls considerable territory on these wheels.

We wish to draw the attention of our readers to the announcement of the Bretz & Curtis Manufacturing Company regarding its 1893 saddle. The Solid Comfort has caught on.

The Rovers for next season will be a leading line. The racer will weigh twenty-three pounds, road racer thirty pounds, roadster thirty-eight pounds, and ladies' wheel thirty-five pounds.

The Thistle eighteen-pound racer, built by the Fulton Machine Works, has proven all its builders could have asked of it. After trials on the road under heavy men it still stands rigid and true.

The Quinton Cycle Filling Company of Coventry is illustrating, in this week's issue, its specialties. The company says it is in a position to execute large orders, and claims its fittings to be made of the very best material.

J. Elmer Pratt says: "We will see the greatest reaction in the bicycle business next year ever known. Old dealers will continue to increase their business owing to their immense agency system and selling capacity."

J. K. Starley busied himself, while in this country, gathering data for after-dinner speeches in Coventry, where he is an alderman and noted speaker. He visited the stock yards, Dwight and many other points of interest in and about Chicago.

The Chapman Hardware Company of Toledo, recently purchased the stock of C. W. Munson of the same city. The latter gentleman thus retires from the bicycle business and is now negotiating to sell his interest in the stand which he put upon the market this season.

Grah, the Columbia agents in Toledo, failed recently, and the Pope Manufacturing Company has appointed the Chapman Hardware Company agent. The Overman company on learning that the Chapman company had been appointed agent, withdrew the Victor agency and placed it in the hands of Collon & Hickock. A merry war is now going on between the two firms.

W. W. Kenfield, president of the Rochester Cycle Manufacturing Company, has recently made the following agencies: George Worthington Company, Cleveland, for the state of Ohio; Anderson Manufacturing Company, Detroit, the eastern half of Michigan; Perkins & Richmond, Grand Rapids, western half of Michigan; H. T. Hearsey, Indianapolis, state of Indiana; G. C. Sweet, Buffalo, for that city, and Benjamin Andrews, Syracuse.

Trade in the western country has been greatly overstocked this season by irresponsible salesmen, who predicted an unprecedented boom to induce sales. J. Elmer Pratt found one firm with fifty-eight of one make of wheel left over. Salesmen who have the best interests of their houses at heart sell a man only such a quantity of goods as they think he can sell. The boomer must suffer in his next season's trade, if he dares travel in that region again.

Gormully & Jeffery's fall business is astonishing. Not a day goes by that one or more wheels have not been sold, the majority being the new diamond frame Rambler, 1893 model. In bringing out and marketing this wheel this fall, instead of waiting until spring, Gormully & Jeffery have made no mistake. Other dealers could have followed the example and, by selling part of the trade now, saved the inevitable rush and shortage of goods in the spring.

John Palmer has for the past few months been at work with the B. F. Goodrich Rubber Company, Akron, O.,

the Raglan has gained a firm foothold in the United States and Canada, and also that the orders he received on the trip are far in excess of those of last year. Harbor Brothers, Bloomington, Jansson of New York, and Bostwick & Company, Toronto, are the wholesale agents.

H. T. Sperry, president, and W. L. Speery, secretary and treasurer of the Sperry Cycle Company of Denver, Colo., were in Chicago last week with the Cycle Signal Corps of Denver. W. L. Sperry is the young man who, with two bones broken in his hand, coasted down Pike's Peak with Eugene P. Blake of Luthy & Company on a tandem.

The Woodruff-Hanchette Company, of this city, manufacturers' agents, has been dabbling in wheels to a more or less extent this year, and has sold upwards of 300 high grade wheels. A few days ago a contract was closed with the C. F. Stokes Manufacturing Company for 1,000 medium grade wheels for immediate de-

making arrangements to double his output for 1893.

Monarch racers and road racers for '93 will have twenty-inch front and thirty-inch rear wheels.

Cushman & Denison, New York, deny that they intend putting on the market a high grade wheel next season.

The Stover company has sold every machine of its '92 output. Next year's output will be greatly increased.

The Machine shop of the Indiana Bicycle Company, Indianapolis, was destroyed by fire Tuesday night. Loss, \$30,000.

Thomas Knight, of the Knight Cycle Company, St. Louis, and a prominent wheelman, died at Owen Sound, Can., Oct. 16, where he was visiting his former home.

The George Worthington, Company, Cleveland, will again handle the Ariel, Rochester and Grand Rapids cycles. The

perfecting his tire and improving it in every way. The work is now about finished and samples will soon be in the hands of travelers. Our readers are familiar with the tire. The valve is a new one, on which patents have been applied for. From the one shown we conclude it will be a success. The patents for Palmer's fabric tire has not as yet been granted.

The Hackney Hammer Company, Cleveland, has incorporated its bicycle department into a new corporation, to be known as the Hackney Bicycle Company. A new building has been secured and new machinery purchased, and the 1893 samples will soon be in the hands of its travelers. Mention of this concern was made some time ago in the REFEREE. Heretofore the output of the Hackney company has been contracted by the Birmingham Hardware Company, Cleveland.

Morgan & Wright tires for 1893 will be branded with the firm's name and "patent applied for." The firm finds this necessary, owing to the many imitations of its tire on the market. Despite these imitations, Morgan & Wright retain all their trade and are securing new contracts daily. Users of this tire last season will not soon forget the many favors granted them by this firm, nor that M. & W. had a year's experience on the very tire others are claiming to make better. As during the past season, M. & W. will repair tires free of cost.

Sercombe-Bolte's New Crank.

The cuts herewith show the new crank manufactured by the Sercombe-Bolte Manufacturing Company of Milwaukee. The concern writes the REFEREE as follows about the new device: "We shall supply these cranks to the trade at an unusually low figure, although they are by all odds the best cranks on the market. They are very stiff, very light, and fastened to the crank-shaft by a device that has more strength than six cotter-pins combined, at the same time by two revolutions of the nuts they can quickly be made so loose that they can be taken off with the hand without further use of tools whatever. To explain more clearly, the thread on the clamp portion is also cone-shaped, and by screwing the nut down it grasps the axle so firmly that no one will ever suffer from a loose crank."

At the same time, for repairs they are more quickly removable than any other make. Owing to the shape of these cranks we can have them drop forged so that very little work is required to perfect them."

Stolen.—\$15 Reward.

WORTH, No. 1,180, both wheels white enameled, \$15.00 reward. Repair shops please look out for this wheel.

24 Cash Prizes.

We desire to thoroughly introduce our Sunol Bicycles throughout the United States in 1893, and in order to give them such an introduction, we realize that we must advertise liberally and well. We are willing to advertise liberally, but that it may be done well, we must have a supply of bright original advertisements. We therefore make the following offer for the best 24 advertising ideas, first prize to be awarded to the author of the best, second prize to the author of the second best, etc.; decision to be made by three competent judges:

1st Prize, \$200. 2nd Prize, \$100. 3rd Prize, \$50.
4th Prize, \$25. 5th to 24th Prize, \$10.

We will also pay \$5.00 for each idea not securing a prize that we think we can make use of. Contest closes January 15th, 1893. For particulars as to the nature of advertisements required, etc., address—

The McIntosh-Huntington Co.,

Adv. Dep't.

Cleveland, Ohio.

THE RACING BOARD'S DOINGS.

Bliss and Keator Suspended—Johnson's Record Sent Back.

The racing board, with every member present, labored long at its session at the Great Northern Hotel. All of Saturday morning and Saturday night, and up to the early hours of Sunday it was in secret session, while the remainder of the Sabbath was devoted to a meeting of the board and the executive committee. The readers of the ordinary cycling journal must wait a week to learn just what transpired at that meeting, while the official hand-organ will be permitted to dish it up in its next issue. But, of course, some things leaked out, and it is now known that Roy Keator has been suspended pending an investigation into his amateur standing. Just what the charges are not one of the board will state. It is also known that Julien P. Bliss, of the Chicago C. C., has been laid on the shelf for sixty days. It is claimed that Bliss repeatedly entered and rode in class races to which he was not eligible, and that the evidence was so strong against him that the board could do nothing but suspend him. As a result he loses several prizes he has won in class races.

Windle's records were all accepted, but those of Johnson were not. However, they will be, though they will be in a separate class. It seems that Johnson's claim for records was in type-written form, signatures and all, and as the rules provide that the signatures of the referee, judges and timers must be attached, the application was sent back for these necessities. Windle was given credit for a flying mile in 2:02 3-5 and 2:05 3-5 for the standing start mile. The flying half in :57 4-5, two miles in 4:28 3-5 and five miles in 11:41 were also

records that were allowed the Milbury man. The board wrestled with several suggestions made to improve the racing rules, but the members were too secretive about this.

When the executive committee and the racing board met in joint session the subject of international races—likely to be held in Chicago next year—was taken up. There were many who were only too willing to go to England to confer with the delegates from other countries regarding the matter. Each pulled his own wire, but it was finally decided to send the league's president as the representative from the United States. Then the joint session took up the mighty amateur question. The members of that august body think they have hit upon a solution of the great problem, but they wouldn't give out any facts—they will appear in the hand-organ. It is doubtful if any of the members are in favor of cash prizes—Col. Burdette isn't, for he said so. He is alleged to have said this to a daily paper's representative: "If the League of American Wheelmen ever adopts the iniquitous divisible cash-prize system it will be when I am too dead to oppose it. The very influence which has prostituted that branch of cycle racing known as the professional or cash-hunting crowd, will disintegrate the entire fabric of the association and fill the ranks with prototypes of those very personages that are now pigeon-holed and tabulated as 'objectionables.'"

For Better Roads.

There was a good representation at the good roads convention at Central Music Hall, some of the most prominent men of the country being in attendance, among them Col. Pope of Boston, Clem Studebaker, Col. George Pope, S. T. K. Prime, Gov. Fuller of Vermont, Gen.

Roy Stone of New York, and Judge Griswold of Connecticut. Gov. Fuller was made temporary chairman. Addresses were made by Gen. Stone, Isaac B. Potter, Prof. Campbell, Gen. Post, J. G. Berrykill, Dr. C. B. Ripley, W. L. Webber, Clem Studebaker and others. Gen. Stone said that in the state of Illinois the money loss by bad roads to farmers alone is estimated on good authority at \$16,000,000 per annum. This, of course, is not the whole tax, since the people in towns bear their full share in loss of trade and increased cost of living, but it will be a safe basis of calculation, and at this rate the total loss for the United States would approximate \$300,000,000 per annum. The average earnings of capital in this country may be taken at three per cent, at which rate this \$300,000,000 is the interest on \$10,000,000,000, or one-sixth of the entire wealth of the country.

Judge Thayer, of Iowa, was elected president, and S. T. K. Prince secretary. The following committee on constitution was named: Gen. Roy Stone, New York; Horace Porter, New York; P. S. Post, J. N. Stahl, T. H. Hackett, F. W. Gerould, Illinois. A. A. Pope, Massachusetts. The committee presented a constitution and the convention adjourned.

The Triumph Cycles.

FIG. 2.

See what Smith, the
Type-writer man, has
To say about the
AIRTITE:

HAVE YOU SEEN
IT?

The Airtite Pneumatic Tire Co.,
#172 Columbus Ave., Boston, Mass.
Gentlemen:- Your favor of Oct. 1st. at hand.

I have fitted with Airtite tires would say that I have used this machine since the 22nd day of June constantly, and have loaned the machine very frequently to different riders of our City, and have never been obliged to do anything to either tire except to pump them slightly twice.

I have not had as much trouble with this machine as I would expect from a solid tire machine in doing the same amount of work, as it would be reasonable to expect to be obliged to cement the solid tire occasionally. In the matter of loaning this wheel would say that it has been loaned to any one making a request wherever there was a possibility of its receiving hard usage, and the tires are now apparently as perfect as they were when new.

In conclusion would say that if any pneumatic tire approaches perfection in my judgment, the Airtite tire is the one.

Yours truly,
W. L. Smith

A FEW RECORDS AND VICTORIES

TO THE CREDIT OF THE "MICHELIN" PNEUMATIC:

The 50 Kilometres and the 100 Kilometres Records.

Paris-Brest and back, 750 miles, in 71 hr. 37 min; Charles Terront finishing 8 hours in front of the second man, Jiel Laval. Corre, on the "Michelin," rode from Basle to Strasburg and back, 300 kilometres, in 13 hr. 10 min. record, beating by 2 hours all the German competitors.

In the "LYON-REPUBLICAIN" race, 326 miles, the first, third, fourth, fifth and seventh men were on the "Michelin" Pneumatic.

In the great race from Paris to Clermont-Ferrand, 242 miles of mostly rough and hilly road, purposely strewn with nails in many places, 61 men finished out of the 75 starters; the largest percentage ever known in competition. All mounted the Michelin Pneumatic Tyre, and had to do their own repairs on the road.

In the Paris-Nantes race, 620 miles, the five first in were on the Michelin Tyre, and the best riders of the day, on other tyres, were hopelessly left.

Mr. Dubois, on the Buffalo track, Paris, on the Michelin Tyre, beat all World's Records, from 100 to 300 miles, and the 12 hours Record, accomplishing 230 miles 536 yards in that time.

★ COMPANY ★

FITCHBURG, MASS.,

MAKES THE BEST BALLS IN THE WORLD.

*This has been proven by Actual Tests. The letter
below explains itself:*

HARTFORD, CONN., July 11, 1892.

G. W. WEYMOUTH, ESQ., Gen. M'g'r Simonds Rolling Machine Co., Fitchburg, Mass.

DEAR SIR:---Replying to your favor of the 9th inst., would say: That we did make a very thorough test of your steel balls in connection with other makes. All the balls we used were purchased in open market, so as to provide against any selection whatever. This was done for the reason that they would show the run, or about as the balls would be delivered from the manufactory. For uniform strength and size yours far exceed any of the other makers, and, therefore, as the result of the above test, we decided to use the balls manufactured by you.

Yours very truly,

COLT'S PATENT FIRE ARMS M'FG CO.,

IT LACKS CONSISTENCY.

The racing board as a body, and the members thereof as individuals, look upon some rules promulgated by this same body in a way that seems to be most inconsistent. When the board began its official life the first act was to chop up, add to and make over the rules as laid down by its predecessor, the board of 1891. A good many changes were made—some very good, some not so good, and some bad. There never was and probably never will be a perfect set of laws, and it is not to be supposed that any future racing board of the League of American Wheelmen will ever form a perfect set of rules by which the racing men of the country may be governed. Any body of men is entitled to be excused when the rules or laws made by that body are not just what they should be. They may have been all right at the time they were made and probably well answered every purpose. On the question of the correctness of the rules—any rules—here is always room for argument and always a chance for betterment; but on the enforcement of these rules there is but one thing to be done, and that is to enforce them. Those who have watched the racing path and know pretty well the 1892 board's rules, also know that they have been enforced in the most hap-hazard manner. The poorest and most foolish rules have been strictly enforced, while some of the more important ones have had no attention paid them.

In the early part of the season referees were instructed, through the medium of the racing rules, that they must enforce the rule which provided that "shirt and breeches shall not bare shoulder or knee." How well this has been enforced, the racing men themselves know too well. A big howl was made at the beginning of the season on this subject, but beyond one or two instances the rule has been as well enforced as if it had never existed. The rule was a little far-fetched, but it was a rule, and why was it not enforced? Some of the members of the racing board have given it out that they "were going to let up a little on that rule." This they evidently have done, and also in several cases of greater importance. The board claims it must have specific charges in order to convict. It has always been the habit to convict and then let the victim prove his innocence. When a member of the racing board is approached with "Don't you know that Jones has sold his prizes?" or "Don't you know that Brown had his

expenses paid by the management of the meet?" or "Aren't you aware of the fact that Smith is receiving a good, fat salary for riding So-and-So's wheel?" he will say that he has heard these rumors, but he has no proof to convict. Just the same he knows that such cases exist. If he knows these men are guilty, why not inflict punishment? Why not say, "You're guilty until you prove your innocence?" The board does this in some instances, why not in others? Such was the case with Keator, of Chicago; but some big guns escape punishment easily enough.

The board is not only lax in enforcing some of its most important rules, but it permits officials to make rules of their own, though there is no written authority for such work. For instance, a referee, through the starter, will tell the contestants in a race that "looking back will disqualify." There isn't a doubt that looking back frequently causes a fall, but where does a referee obtain his authority for the enforcement of this alleged rule? He has none whatever. If a rider, through looking around, causes a fall, it would be quite right to disqualify him for reckless riding, but we cannot see how a referee can take upon himself the right to make rules. It would be a good plan for the board to make a rule as suggested to fit such cases. The board might adopt another rule—compel the attendants and pushers to leave the track within thirty seconds after the start, under penalty of having their men disqualified. If this was adopted and enforced the riders would see to it that their pushers were men who would obey the rules. But if, like many other rules, it should not be enforced, it might better never be made. All in all, the racing board, of the present, at least, is a most inconsistent affair; seemingly lacking of the necessary qualifications to enforce some of the most simple rules created by itself, and utterly blind as to the many infractions of these same rules by some of the most prominent racing men of the country.

THE "OFFICIAL REPORT."

Long after the interest in its doings had ceased, the racing board gave to the cycling public the "official report" of its doings at the Chicago meeting. We learn from this "official report," published in the *Haul Organ*, that some four violators of the amateur law were reinstated, among the number being Gerwing of Denver. Roy Keator "was suspended for sixty days pending investigation, on charge of having accepted cash for expenses for fancy riding," but nothing was said about the eastern men who received their expenses from the Chicago club while attending the Washington Park tournament. All of the eastern men's expenses were paid on the western trip, but not a word was said about it by the racing board, while they took occasion to suspend Keator when he had done nothing more than have his hotel bill paid, as we understand. This may be justice, but it's a new kind. The board was compelled to pass this resolution:

"It having been brought to the attention of the national racing board that a cycling paper has stated that it proposes to promote a tour of the country by bicycling racing men, amateur wheelmen are hereby warned that they have no right under the constitution of the A. L. W. to accept or in any way receive from or through a cycling paper, or any other parties interested in the trade, money for their expenses or compensation for attending such tour for the purpose of racing, and any attendance upon such a trip will be closely scrutinized by the board."

There isn't a doubt that "any attendance upon such a trip will be closely scrutinized by the board." Its members will be interested to know who are the ones to go on the trip, and they will also

watch with interest the results of the three months' races. But will all the men who take in the trip be asked for an explanation of their actions; will they be suspended for receiving expense money? It is understood that each man who goes on the *Sporting Life's* trip is to pay to that paper \$1 per week, and for this princely sum the journal agrees to carry them through. If this isn't violating a clause of the amateur rule, what is it? This is what the rule says:

(d) Accepting directly or indirectly for cycling, any remuneration, compensation or expense whatever from a cycle manufacturer, agent or other person interested in the trade, or from any other person having a pecuniary interest in the sport, except that a cyclist may accept from the cycle or athletic club which he represents his necessary expenses in training for the and attending race meetings.

There isn't a bit of danger that any of the pure whites will be molested in the least by the board. If there were, say, six, third or fourth raters going on the trip, we should expect to see an even half-dozen suspensions.

L. A. W. MACHINERY.

While praising the grand record recently made by the ocean greyhound, the City of Paris, the lay press made no special mention of the machinery of the great boat, her engineers, oilers and stokers. Now, to accomplish great things the machinery must be in perfect working order. When the ancient and honorable *Bicycling World* recently declared, editorially, that Charles L. Burdette could again secure the league presidency if he wished, the statement was no doubt made advisedly, the organ evidently knowing the machinery of the L. A. W. ship to be in record-breaking order and that the engineers and oilers had done their duty in case a trial-trip is needed. The machinery of the good ship L. A. W., as everybody knows, is of Connecticut and Massachusetts build, and is of exceptional quality. The chief engineer is a well-known young man and his assistants are faithful, while the oilers are noted. It was a bold statement for the ancient and honorable to make when it said "he can succeed himself if he so wishes." It proves that during the summer days the machinery has been well cared for by the chief engineer, while stokers and oilers are ready for a test of speed if needed. The REFEREE readers need not worry about Charles H. Luscomb being an opponent of Burdette for the presidency. Mr. Luscomb knows how futile his efforts would be after reading the *World* editorial; he knows the machinery is in too good working order to be monkeyed with.

WHEELING says that Johnson's "performances are valuable only to show the possibilities of the cycle. For comparison with English records they are worthless. If Harris were shielded from the wind and paced by horses on a kite-shaped track, we would back him to do better time than Johnson's." It has been claimed that Zimmerman, Tyler, Windle and possibly one or two others could do much better than Johnson under similar circumstances. It does not alter the fact that Johnson *has done* what others *could* do. If these good men can do so much better, why don't they? Johnson has made the records, the others have not, and it is only fair to give the young man credit for having been the first to pedal a mile on a bicycle inside of two minutes.

THESE lines appeared in the *Bicycling World* of Oct. 28: "Mr. Sanger will appear on the 23d and try conclusions with the eastern and western cracks." [The italics are ours.—Ed.]

ILLINOIS will have convict labor improving the highways next year.

NOTES AND COMMENTS.

The wintry winds have begun to blow; the dedication exercises in New York and Chicago are things of the past; the leaves are sore and yellow, and the cycling season of 1892 is history. A strange season, too—the most unsatisfying and the most eventful season that has ever been, and the most trying to maker, dealer and rider. It has left us in the most uneasy and unsatisfied condition, from a trade standpoint, that we have ever known. What will the morrow bring forth? It is a pertinent question and one that all would like to answer. It is certain the business is in an unsatisfactory condition; it is certain that a change in business methods must obtain before the trade can be placed on a solid basis; it is certain that makers and dealers must come to some understanding before the new season opens, or next year will be worse than this, and yet no steps have been taken toward such an understanding. To the thinking mind affairs look anything but pleasant. The struggle for place has already begun and the drummer is abroad in the land; but the man in the office is uncertain, the man in the shop is still more uncertain, and neither knows what to do. Jobber or dealer, light or heavy wheels, what kind of tire, where shall we sell our goods—all of these things are nightmares, and, like Banquo's ghost, will not be down. Over all stand the twin bogies, the cholera scare and the Columbian exposition. I don't envy maker or dealer when either dreams of 1893.

* * *

The New York parade was a failure, and I am glad that the Chicago people had sense enough to keep out of a similar catastrophe. Daylight parades behind a band and a couple of mounted coppers, are bad enough, Lord knows. In the range of my experience I have never seen even an unmixed parade that was not in every sense a fiasco, and think of putting a lot of cyclists behind and in the midst of a struggling, irritated crowd in the night! Ye gods, forbid. Such exhibitions as the one in New York will do more to retard the sport than years of hard work can do to advance it. The time has come when L. A. W. meets, lantern parades and all the tom-foolery attached to both should be eliminated from the sport. Let us try our hands at being men awhile and see what the result will be. Business men and business methods must and will surely come into the trade and the sport in time. It has been a wonderment to me for years why they have delayed so long, but until they do come we must expect all sorts and conditions of nonsense, and must put up with it. But the parade fiend, the badge fiend, the beer fiend, and that most uncomfortable of demons, the crank who roars and yells club call, ought to be sat upon.

* * *

Tom Eck has said it; he has "perpetrated his last fake." Now if Prince and Knapp will only come forward to the mourners' bench and confess righteousness, what joy would be in the fold. Bring forth a halo with forty golden spokes, a Feathers one tire and an elliptical sprocket wheel, and crown the glorified Thomas. O, ye racing board; let let the harp that you give him be made from weldless tubing and strung with founding spoke wire; let the world rejoice that Eck has ceased to fake. No more will he mix promiscuously among the Flannagans, Ashingers and Princes of the cycling arena. Pure shall be his name and doubly washed his nature, and he will attend strictly to bringing out unknown wonders on unheard-of tracks and help them gain impossible records—but never a fake. LA COTE MAL TAILE,

The Tariff on Bicycles.

The subject of tariff on bicycles and raw material has not been discussed by American cycle journals, nor have the British journals thought fit to enquire into the act introduced by William McKinley and its bearing on the trade of both countries. The cycle journals possibly have good reasons for not debating the question. A paragraph in this paper, as a "feeler," last spring, did not start the ball rolling. It has been left for the lay press to discuss the important question, and, as usual, both sides are confident of being in the right. The REFEREE representative, in a talk with a very conservative English manufacturer, is told that the McKinley bill, as far as bicycles are concerned, acts as a balance wheel between the American and English manufacturer, and inflicts no hardship on either side. Cycling Editor Turner of the Springfield Republican (Dem.) sends the following editorial, which appeared in his paper last Sunday:

It is impossible to say how many bicycles are in use about Springfield, but the number must be extraordinarily large. They cost from \$135 to \$150 or more—good ones—and yet their use is not confined to the class which we should consider alone able to indulge in such a luxury. Clerks on very limited pay have them. Mechanics who find close calculation necessary to make the two ends meet, seem to be able to support these costly machines. Workingmen and boys ride to and from their day's labor on bicycles more often of the latest styles and improvements than otherwise. There is scarce a street in Springfield that can be traversed at morning, noon or night without seeing numbers of the machines go spinning by.

People must often have marvelled how so many of supposedly limited means were able to command the indulgence of a \$150 horse and carriage, as it were. We have heard men who must command \$2,500 and more a year say that they could not afford it. Is this number of bicycles in use a fair measure of the financial condition of what are commonly called the "working classes"? Probably not. But such is the fascination of the sport or exercise that severe self-denial in all other directions will be practiced to gratify the desire for bicycle riding. It cannot be otherwise, however, than a most healthful and beneficial sport. When men can get out of a morning and take a twenty-mile spin before breakfast and think nothing of it, we may well say the wheel craze has come to stay. And we hope it has. It is a most encouraging feature of the life of the day. It is bringing the riders to an acquaintance with the fields and woods and hills and fresh air such as they never have before experienced. Out of it largely is growing this helpful demand for good country roads in place of those which, in their present badness, are doing so much to isolate country communities and injure the markets for farm produce both to the farmer and the town consumer.

Why, then, should the price of bicycles rule so high? Here is a demand for them that is coming to be well nigh universal among all classes and both sexes. It is a demand that can be satisfied with great advantage, not alone to the individual but to society. But at present prices it is simply asking the average man to starve himself to enjoy this simple and healthful exercise. Is there any call or justification for such prices? The common impression—we do not vouch for its truth—is that the best wheel can be sold at a large profit under \$100 or under even \$75. We have on hand some interesting proof of this. During his stay in England last Summer an American traveler applied to the manufacturer of the Victor bicycle, who was then in London, for a wheel. He received this answer:

"FIRST AVENUE HOTEL, BLOOMING, LONDON, W. C., Aug. 15, 1892.—Dear Sir:—Replying to your inquiry for Victor bicycles, with Victor cushion tires, you can procure the same of the Overman Wheel Company, Chicopee Falls, Mass., U. S. A., for \$135, less twenty-five per cent. on account of export. Or, if you care to send me £20, I will see that your order is filled at once. Our cushion tire is not to be compared with the so-called cushions here. It is marvelously good. We make but one grade bicycle, the highest. Awaiting your commands, I am, very truly yours,

A. H. OVERMAN.

Here we have it stated to us that foreigners are privileged to buy American bicycles twenty-five per cent. cheaper than we are. Does anybody suppose that this particular \$135 bicycle was being sold under cost, or otherwise than at a good profit at £20 or £100? Does the twenty-five per cent. discount on export orders represent a case of throwing surplus stocks on the foreign market for what they will bring; or, rather, does it not represent the conditions of a regular and profitable business? The situation seems to be just this: Bicycles of foreign make are taxed forty-five per cent. at our custom houses. Behind this tariff tax the domestic manufacturers, protected also by patents, have been enabled to combine and keep up their prices quite to the full extent allowed by the duty. When they venture outside of this tariff wall they are at once obliged to reduce their prices to the untaxed level of the world's market—which they are perfectly willing to do, and apparently able then to pocket a handsome profit. Consequently in this case each buyer of a bicycle is being needlessly taxed from thirty-five to forty-five per cent. "on account of the tariff."

There appears to be no justification for the present excessive charges for bicycles imposed on

machinery is better than in England. Our material costs about the same. It is no exaggeration to say that our wages are double theirs.

As to the price charged for the trifling number we export, it would matter little if we got nothing for them. * * * We would still accomplish our purpose of having them known abroad. I should be perfectly willing to accept as a profit on my business the difference between the wages I pay and the wages paid in England for similar work. I employ from 100 to 1,000 men, and am well informed of the prices paid for bicycle work in Europe. If the protective tariff were removed I should invite my men to work for half the price they are now getting. If they declined I should be obliged to close my mill. This argument should be a good one in manufacturing Massachusetts, where our welfare depends greatly on the intelligence and position of the workmen about us. If you care to publish facts regarding wages for skilled workmen in Europe I can give you the result of careful investigation in England, France, Belgium, Germany, Holland, Switzerland and Italy during the past ten years.

Very truly yours, A. H. OVERMAN.

THE "UNION'S" SIDE OF THE CASE.

The Springfield Union (Rep.) notices the subject editorially as follows:

The Springfield Republican, in an editorial entitled, "The Uses and Prices of Bicycles," devoted nearly a column on Sunday to a big discussion of the tariff. The entire article was simply a miscellaneous collection of fallacies put together in a manner that was intended to give the readers

A SUGGESTION FOR A NEW LEAGUE EMBLEM

We believe we are correct in stating that there are Chinamen and negroes in the league; but it is not generally known that a bull pup is also a member. Such is the case—L. M. (Lincoln Mascot) Snaix is a member of the league and of the Lincoln club. Do all want the addresses published?

* *

Burdette and Divisible Cash.

If the telegraph reported the president of the L. A. W. correctly at the meeting for mothers of the L. A. W. only, held in Chicago, the colonel became somewhat excited, and, bringing his fist down on the table, said: "When the L. A. W. adopts the iniquitous divisible cash prize scheme, it will be when I'm too dead to oppose it." If I understand the constitution, as adopted by the L. A. W., President Burdette is a salaried or cash prize servant of the body of cyclists, not its master, and bears much the same relation to the L. A. W. that President Harrison does to the nation, but with powers possibly a little less autocratic. Therefore, when the genial Hartford colonel gets mad and attempts to coerce or dictate to the 31,970 cyclists as to what they should or should not do, I'm afraid the gentleman from Hartford will run against a stone fence. The "iniquitous divisible cash prize scheme" has not made many great sinners of some good citizens of this country in divisible cash prize horse racing, among them governors, senators, preachers and some of the very best citizens of Hartford, so with the iniquitous divisible cash prize scheme

the American consumer. Why should the foreigner be favored in this market to the extent of twenty-five per cent. over him? It is an imposition that cannot be lightly regarded. Plainly, patent protection gives the manufacturers all that is needed in this case. All above this is being used to enable the few proprietors of patents to accumulate so much the more excessive fortunes. The bicycle makers should be more moderate in their exactions. Let the prices of bicycles be reduced at once.

MR. OVERMAN GETS IN A WORD.

Mr. Overman does not agree with the Republican evidently, for he writes that paper as follows, under date of Sept. 24.

Answering your inquiry, it is true that we occasionally sell a bicycle in England for twenty-five per cent. less than our retail price. We sacrificed our profit because we are compelled to in order to introduce our bicycles; compelled by the fact that bicycle manufacturers and bicycle wage-workers in Great Britain are forced to work for cheap prices, since they have no protective tariff to defend them in their enjoyment of their home market. We generally have more orders than we can fill at home, and do not care for foreign trade except that we should like to have our bicycles known in Europe in the event of our ever being compelled to go there for a market, which might arise if the protective tariff was taken off.

We charge more for bicycles here than English makers charge, for the reason that we pay our workmen double the wages paid theirs, and our

impression that the tariff is a tax. This could only be possible, however, in cases where the Republican's readers were as unfamiliar with the principles of protection as the editor of that newspaper appears to be. There was, in fact, scarcely a line in the cleverly written leader that will stand the test of argument based on fact.

The Republican printed a letter written by A. H. Overman while in Europe last summer offering to sell one of his \$135 bicycles for \$100, and jumps to the conclusion that there was a good profit on the wheel even at the smaller price. In consequence, the Republican argued that the wheels could be sold in this country, with a good profit, at \$100 or even less, and drew the conclusion that purchasers of wheels were compelled to pay \$135 or \$150 for bicycles because the Republican principle of protection enables American manufacturers to combine and keep up the prices.

Space at this time does not permit reference to all the misstatements and inconsistencies in the Republican's editorial. It will be perfectly clear to every fair-minded student of economic questions, however, that American manufacturers—of bicycles or any other articles—cannot sell their goods at as low a figure as foreign manufacturers, for the reason that the American manufacturer pays double the wages paid by foreign manufacturers. The American manufacturers neither expect nor attempt to sell goods manufactured by high-priced American labor at a profit in competition with the starvation-priced labor of Great Britain and other foreign countries.

Mr. Overman does not export over half a dozen

I don't believe the country and its cyclists will go the demnition bow-wows—provided the L. A. W. or any other well-organized association takes care of the scheme. Of course we of the cash prize persuasion would not like to see the genial Hartford colonel dead—too dead to oppose us—but a colonel would not be missed in L. A. W. politics or in the nation's affairs, for, in the words of the immortal Garfield, "the government at Washington would still live." I fancy the L. A. W. would also. The danger with the L. A. W. seems to be a centralization of machinery power, but it never will be a one-man concern. The president should and will do the bidding of his employees, the rank and file, and not the few salaried favorites, who receive divisible cash prizes for their services, and who are conspicuous for their devotion to the test of the national organization. I do not know what President Burdette's idea is now on the amateur question, but last summer in Hartford he told me the only difficulty was in "proving to the satisfaction of the racing board." Well, here is something that may help the racing board solve the question—an extract from a prominent eastern manufacture to a racing man not far removed from the L. A. W. racing board's machinery. In order to prove the genuineness of the letter the original was shown to the secretary of the League of American Wheelmen, and it remains to be seen if the L. A. W. will allow manufacturers and racing men to go on in the present way, or to come out for cash flatfooted, and not perjure themselves and let the money in a way that cannot improve their manhood or self-respect.

"Of course the leading men would still ride for manufacturers, and ride their best, or they would not be retained long, if cash prizes were introduced," said a prominent tradesman last week, "and the only change would be in giving the cash openly instead of the behind-the-back method." This man, who knows all the best men, and knows something of the cost to his firm for racing, was right.

Here is the letter referred to, or at least an important portion of it:

"We would like to know whether or not you care about going to California with the *Sporting Life* team, to ride one of our bicycles. The trip, of course, will cost considerable money, and as you probably know, six of the representative racing men of the country, including Zimmerman, Windle, Taylor and Tyler, and one or two others, will go. As we have agreed to furnish and to pay for one man, we would like, if your arrangements are such that you can accept, to have you go. The trip will last about three months, and there will be racing twice a week through California, Mexico and Texas and the southern states. The writer asks you to keep this in strict confidence, and to mention it to no one. Let us hear from you as soon as possible, as we wish to settle who is to go for us. Yours very truly."

Notwithstanding such letters being public property, the racing board has failed to enforce the beautiful amateur rule. Where does the iniquitous part of the programme come in, President Burdette? Keep your eye on that divisible car load of pure ones which will shortly sally forth under the protection of the L. A. W. racing rules.

Mrs. Peck's New Club.

Mrs. M. L. Peck, L. A. W. 40,914, is a hustler, if that term can be applied to the fair sex. Mrs. Peck was marshal of the fair squad of the cyclists division in the late New York parade, and ran

things quite correctly. Now Mrs. Peck has another scheme, and she called at the REFEREE office to ask the assistance of the paper in booming a club formed of both sexes. The first meeting towards forming an organization was held last Wednesday evening on Seventy-second street, when several officers were chosen as follows: President, Mrs. M. L. Peck; vice-president, L. P. Dosh; treasurer, George F. Adams; secretary, Emma C. Owen; assistant-secretary, J. Charles B. Smith; first lieutenant, Mrs. Bessie D. Farman; second lieutenant, Mrs. Seers; color bearer, Mrs. W. E. Smith. The object of this club will be to encourage the sport of cycling among the ladies and to cultivate a stronger feeling of sociability among the women riders of the wheel.

It will be noticed that a captain was not chosen—he will be a brave man who tackles the position. Anyhow, the REFEREE is invited to a moonlight run next Wednesday in Central Park, and will train on "Nervine" between now and then.

Fees For Handicapping.

E. C. Carter, the national Amateur Athletic Union handicapper, it disconsolate and will not be comforted and happy until things are evened up in handicapping fees. Said E. C. to the REFEREE man: "Wouldn't I like to be a bicycle

too. For instance, Mike Quinlan had the gout and "Doc" recommended a mustard poultice. Quinlan had to wear a carpet slipper for a whole month after using it. Frank Ray, the G. & J. New York manager, complained that his two-months' old infant was not in record-breaking condition, and bought a baby carriage from the Gendron Wheel Company. Alex sells all New York and Brooklyn cyclists carriages, and allows a discount if a father or mother is an active rider. With Ray's carriage he sent the following note:

"I know what is the matter with your kid; he wants a change of diet. Stop feeding him with oatmeal and beefsteak, and other food suitable for record-breaking; you just feed him with the bottle of sterilized milk I sent in the carriage. Wheel him out twice daily and show him the Columbus monument, which will give him hope and inspiration, while the milk will do the nutrition part of the business. When he grows up let him ride a Gendron."

Ray believed in all the advice and will act on it.

Luscomb's Workers are Hustling.

Mr. Luscomb has appointed his nominating representative committee, and the committee in turn has nominated the ticket representatives, who are expected to vote as they are directed. A well-

The Bidwell Tire Factory, New York.

handicapper for a year! All the Union allows me is \$5 for 100 entries; over 100, \$10; under 400, \$15. At the Passaic games, for instance, the handicapper, Prial, got \$50 for 200, and I got \$10 for the same number in the athletic events. Is it any wonder I am getting thin? I complain, not because I begrudge Prial his \$50, but because I want a little more generosity displayed toward me by the Union." With that Carter moved slowly and mournfully down Broadway. Speaking of the fees of handicappers, it is said that Prial made the past season as much as the secretary of the L. A. W. gets per year, \$3,000, and Goodman was close up. The sum of \$50 charged for a few events at a small meeting of a small club does seem high. But it is the club's own fault; it should give class races. What does a man in New York know about the form of a man in a country town near Buffalo? Handicaps in the United States have been more or less a failure and will continue to be so.

"Doc" Schwalbach.

Alexander Schwalbach, of Brooklyn, and likewise of Chambers street, New York, is a very versatile young man, with a large and interesting family. Alex looks young, but is old in wisdom. He was a horse doctor before going into the bicycle business, and is now called "Doc" by the majority of his friends. He keeps up his veterinary knowledge,

defined ring can be seen by looking closely at the paper called a ticket. One of the representatives nominated, however, seems to be from the outside, as he stated the other morning that the honor was a surprise to him, and he immediately asked two cyclists what was expected of him and what would his duties be. One of the young men volunteered the information that the best thing he could do would be to "vote with the gang." He thought he would.

Off For the Indies.

Achille Philon, the spiral tower man who created such a sensation in London two years ago, and at San Francisco last winter, called at the REFEREE New York office last week and outlined an extensive South American and West Indies trip. Philon rides a Century Columbia, his wife rides a Premier, and he will take along with him Charlie Price, the Milwaukee amateur, and Lillie Williams, the Omaha cycling soubrette, for exhibition racing purposes. The party will sail for Jamaica next week, and will give exhibitions through the Indies. Price will act as engineer of the steam road carriage, a Philon invention, and will race against amateurs where they can be found, while the fair Lilly will ride her Sercombe & Bolte Telegram safety against Mrs. Philon to the edification and instruction of the numerous spectators the Philon show will attract.

Price will also ride a Telegram, and Mr. Philon assures the Milwaukeeans that their cyclist will remain a pure amateur on his travels with the professional aggregation. There is another side to the trip. Philon proposes to give the tournaments with a view of starting a cycling boom in the islands of the sea, and will, if possible, establish agencies for cycles in the larger places. He says the roads in the British West Indies are the best that can be found, through the manipulation of native and criminal labor. The roads are for the most part macadam, with a layer of cement. Stretches for miles in the country form an ideal road for cyclists. A column notice in the leading Jamaica paper welcomes Philon and his troupe.

Sullivan's New Company.

The American Sports Publishing Company, with Colonel James Sullivan of the *Sporting Times* as president and E. C. Newell secretary and treasurer, has been incorporated for the purpose of publishing an athletic library, and will treat all branches of athletics in a monthly book the company will issue. The extensive knowledge of athletics of the president of the concern, assisted by the athletic and sporting editors of the New York dailies, will assist in giving the athletic world something reliable and interesting. The company will also control the advertising of several large concerns in the athletic goods business.

Guy Wilson a New Yorker.

Guy P. Wilson, late of the Baltimore *News*, has forsaken the Oriole city and will in the future make New York his home. He will become connected with one of the big dailies. Mr. Wilson has been a prominent Baltimore cycling figure, and worked hard for the sport in Maryland. He thinks, however, that there are more kicks than honor in being a worker in the cause of cycling, and doesn't yearn for any more distinction on that score. He will join the New York Cycling Press Club when the latter is reorganized, and it is hoped the club will have the active assistance of the clever writer and hustler. What is Baltimore's loss is New York's gain.

MORGAN.

A Good Scheme.

A "starting" novelty is about to be tried on the new Paris track. Instead of the historic man with the pistol, a series of posts, each being fitted with a sonorous bell, will be placed at distances of twenty-five metres round the track. Electric wires will connect these bells, and the starter, instead of risking death by explosion from an old blunderbuss, will merely touch the button and set the whole (including the riders) in motion. Now, Herne Hill.—*Wheeling*.

There's a Difference, You Know.

The "Yankees" are endeavoring to obtain a portion of the grounds at the Chicago exhibition, which will be held next year, for a comprehensive exhibit of roads and their construction and maintenance. The rural highways in the land of "stars and stripes" are, be it said, most atrociously irregular and uneven, and while a considerable improvement has been manifest of late years, there is still much to be accomplished ere the cyclists of the States will understand the pleasures of travel as they are known to their cousins on this side of the "herring pond."—*Cycle Record*.

And notwithstanding this knowledge, the Britishers wonder why we can not make road records.

William E Hunter of Lynn, Mass., has just reached his home, having ridden to Chicago. He covered the 1,200 miles in sixteen days, arriving at the World's Fair grounds Oct. 14.

The first annual meet of the Dallas Wheel Club will go down in history as the largest and best ever held in Texas. The races were deferred a week, owing to incessant rain during the past two weeks. On the 27th, the first day of the races, the wind blew a gale and the track was miserable, but Old Sol beamed forth in all his glory, and the boys were full of good cheer. Fast time was impossible, but the quarter was ridden in 33 1-4. W. A. Parker, of Waco, had everything his own way, being beaten but once. Friday evening the club entertained the visitors with an elegant banquet and smoker, mingled with songs and speeches, Mr. McGarvey, of Kentucky, rendering a quantity of the latter. The summary:

SECOND DAY.

G. W. Hubbard, 2; Roy Spore, Houston, 3; time, 2:50.

Carruthers, Houston, 2, Woodurnth, Dallas, 3;
time, 3:19 2-5.

The officers were: Referee, L. W. Hope, Sherman; judges, T. L. Lawhon, John B. McCraw, Hugh Blakenee, all of Dallas; timers, L. A. Cohn and G. Harris of Dallas, and A. Q. Nash, of Sherman.

Bert Harding, of the St. Louis Cycling Club, tackled Hal Greenwood's De Soto round trip record Sunday, and the way he took that record down was a caution. Quite a number of things were against him on the trip. The road's had just been repaired and Harding encountered a good deal of new gravel. It was a cold, raw morning when he started from the club house, the start being made at 8:02 a. m. Point Breeze was reached at 8:36; Maxville, 9:24; Bulltown, 10:05; Hillsborough, 11:08, and De Soto at 11:57. Here he stopped for a lunch, leaving at 1:10 p. m. He passed through Bulltown on the return trip at 2:45, Point Breeze at 4:26, and reached the club house at 5:25 p. m.

His time on the down trip was 3 hrs. 57 min., only about seventeen minutes behind his time the day he broke the single trip record. Every hill was climbed on the way down, but coming back he

w lked Frisco and Kimmswick, as, owing to a brak in his wheel, he was afraid of breaking the frame. The tme for the round trip, 9 hrs. 25 min., is 2 hrs 31 min. ahead of the record made by Hal Greenwood in his ce'brated race with Perce Stone five years ago. Harding practically made his own pace the entire way, though members of the cycling club kept with him at different stages of the trip, mostly for the purpose of checking at points along the road. Harding was pret'y tired when he reached the club, and showed it very plainly, but after a good rub-down he seemed to feel all right. He rode an Imperial light roadster.

The timers were G. M. Wilder and W. P. Laing at the start; Thomas Coburn at DeSota, Frank Ayers at Point Breeze, and Wilder, Laing and Rule at the fin-

daily. The racing board of the Milwaukee Wheelmen has the meet in charge, and is working hard to make it a success. Chairman Schroeder states that the prize list will be first class, as many valuable prizes have been guaranteed, and the club will add many others.

If the *Sporting Life's* excursion to California and the south proves a go, assurances have been given by Mr. Troy that the car, with all the great racing representatives of the country, will be in Milwaukee during the tournament to participate in the races. Zimmerman, Windle, Tyler, Taylor, Berlo and others would prove great drawing cards and make the meet a doubly-assured success.

JACK ROYAL.

Buffalo Race Matters.

"To be or not to be" seems to be the question regarding "that" road race. The Buffalo end of the dispute is willing from all accounts, to concede any or all courses if the Rochester end will only come in; but it won't, and the Buffalo end may suit itself regarding detail. On Saturday forfeits were posted with H. C. C.

was won from scratch by the former in 13:28 1-2, while Rhodes dropped out. Neither man was entered and got to the track just in time to start in the race, the referee having allowed them to ride. Some of the Nashville people didn't understand this and thought there was something wrong. At any rate, Johnson had not received his prize at last accounts. The results were as follows:

Five-mile, handicap—J. S. Johnson, Minneapolis, 1; J. L. Newsom, Jr., 2; J. B. Farmer 3; time, 13:28 1-2.

SECOND DAY.

One-mile, scratch, open—J. H. Gardner, Nash

Milwaukee Wheelmen's Indoor Bicycle Track—Exposition Building.

ish. A claim will be made to the Century Road Club to have this record put on its books.

Milwaukee's Coming Tournament.

During Thanksgiving week the Milwaukee Wheelmen will hold a tournament at the exposition building. A race track will be built, and when completed will be the fastest indoor track in the country. The designer of the plans, Martin Palitz, visited Minneapolis, Chicago and New York for the purpose of obtaining all the information possible in regard to the way tracks had been built in those cities. The track will be built the same as the one in Madison Square Garden, New York, and will be ten laps to the mile. One especially meritorious feature of the construction is that a rider going at a 2:15 gait will find it impossible on the turns to strike his pedals, while it will be necessary for him to go at a three-minute clip if he wants to keep on the track. Work on the track is now in progress. It will be built of one-inch boards, with a regular covering of flooring, and when completed, which will be some time this week, all racing men who have entered the races will be allowed the free use of the track.

Martin by the Press C. C. and the Ramblers B. C., so the prospects for a race are a little more encouraging than before. The time now agreed upon is Nov. 5, and all interested are hoping and praying for good training and racing weather. The Press C. C.'s men are training for this event under the direction of C. H. Callahan. The Ramblers B. C. boys are not saying very much just now, but they have their working clothes on, and the amount of training going on is enormous. The team for the road race next Saturday is hard at work under the care of Captain Klipfel, and the men are in the pink of condition. Captain Klipfel is sure that he has the winners in the team, and Callahan is equally sanguine.

WILLIE DUNN.

Johnson Won at Nashville.

Nashville's big two-day meet last Thursday and Friday did not pan out very extensively. Dan Canary, who returned Saturday, said there must have been seventeen people in the grand stand the first day and twenty eight on the second. The meet was given at Cumberland Park, under the auspices of the Capital City C. C. Johnson and Rhodes started in the five-mile handicap, which

ville, 1; J. M. Rains, Nashville, 2; W. C. Paine, Evansville, 3; time, 2:52 4-5.

Half-mile, handicap—J. M. Rains, 20 yards, 1; Jay Newsom, Nashville, 10 yards, 2; W. S. Pearson, Nashville, 30 yards, 3; time, 1:12 1/2.

One-mile, handicap, open—J. H. Gardner, Nashville, 20 yards, 1; J. M. Rains, Nashville, 40 yards, 2; R. E. Bennett, Nashville, 100 yards, 3; time, 2:41 4-5.

Two-mile, handicap; open—Jay Newsom, Nashville, 50 yards, 1; R. E. Bennett, Nashville, 250 yards, 2; J. B. Farmer, Nashville, 100 yards, 3; time, 5:33 1-2.

Half-mile, open—First prize, J. H. Gardner, Nashville, 1; W. C. Paine, Evansville, 2; J. M. Rains, Nashville, 3; time, 1:16 3/4.

One-mile, handicap—O. B. Gardner, Nashville, 250 yards, 1; W. S. Pearson, Nashville, 250 yards, 2; Jay Newsom, scratch, 3; time, 2:55.

One-mile, handicap—Fitz Bachmann, 575 yards, 1; W. J. Potter, 500 yards, 2; Jay Newsom, 100 yards, 3; time, 1:59.

Two-mile, handicap—Jay Newsom, 400 yards, 1; J. H. Gardner, 350 yards, 2; J. S. Johnson, scratch, 3: time, 5:05 1-2.

The officials were: Referee, J. C. Combs; judges, C. H. Bader, J. M. Gardner and William Cox; timers, T. C. Petri, J. I. Newsom, Jr., and Charles W. Woodward; clerk of the course, Henry J. Stack; starter, J. Elmer Pratt, Chicago.

Newton Won from Scratch.

The Beloit, Wis., twelve-mile road race was held Friday last, twenty-five men starting and finishing before a large

An illustration of Racing Board methods, adopted for the benefit of the official organ to the detriment of the league at large.

crowd of people. The road was in good shape, but a strong, cold wind prevailed. E. A. Newton finished first from scratch in 55 min., thus securing first place and time. F. N. Pratt was second and George Whitford third.

The M. & W. Road Race.

The M. & W. Cycling Club held an eight mile road race last Saturday over the Oak Park course. W. Whitman, the fourteen-year old office boy, won handily. His handicap was twenty minutes. F. W. Morgan was a contestant. The summary follows:

Name.	Hand'p.	Time.
W. Whitman.....	20:00	35:35
B. F. Campfield.....	45	30:47

Chicago C. C. Ordinary Run.

The road officers of the Chicago C. C. have called an "ordinary run" for Sunday from the club house to Pullman and return. None but solid-tired ordinaries will be permitted on the run. It is a novelty surely, these days, and there is now a demand for the g. o. o. Safety riders will not be permitted to accompany those on the ordinaries under pain of having the valves taken off their machines and a walk home. It is proposed to impose a fine of twenty-five cents for every header and ten cents for dismounts, the "pot" to pay for dinners at Pullman.

Race Chat.

An indoor meet at Madison Square Garden is talked of by the Harlem

Wheelmen, and will be arranged for some time in December.

The Baltimore club will hold its annual ten-mile road race Thanksgiving day.

The Capital City Cycling Club of Lincoln, Neb., has arranged for a ten-mile road race. The course will be to Havlock and return. The race will take place Nov. 10, with perhaps thirty-five entries. Fifteen prizes will be given.

Last week Fred Hatch of the St. Paul C. C. broke the local hundred-mile record, going from St. Paul to Northfield, and then to Minneapolis and St. Paul, in 7 hrs. 52 min. This is three minutes better than the mark made by T. L. Bird two weeks ago.

Races will be held by the Washington Wheelmen of Tremont, Pa., election day, on the Westchester course, consisting of mile, novice; mile, handicap; half-mile, handicap; 100-yard, slow race; two-mile, handicap; ten-mile, handicap, and mile consolation.

The Centaurs of Baltimore will hold a sealed handicap ten-mile road race election day. The club championship medal will go the man making the best time, while other prizes will go to those finishing first, second and third. If permission can be obtained, the race will be held in Druid Hill park, otherwise on the shell road.

Saturday last Worth & Sterner, the West Madison street cycle dealers, gave a youths' century race. Five of Chicago's sturdiest young riders started. Earl Hamilton, whose age is 18, and Harry Geer, 16, allowed Ralph Kinney, 17, Fred Henderson, 14, and Lawrence Reed, 16, an our's handicap. Harry Geer came in a winner in 8:30, clipping off two hours from the best known youths' time. Henderson completed the run in 9:40, Lawrence and Kinney rode 45 miles

and Hamilton completed a half century before stopping. Harry Geer is not unknown in the local cycling world, this being his fourth century the present season, all ridden on a forty-six inch pneumatic tired Eagle. Hendersn has ridden two centuries this season. Both men finished apparently fresh Harry Geer rides under Minnette club colors, and is a hardy long-distance rider.

The New York papers say that in the race of the Newark Letter Carriers Cyclers the third man was Robert Clunich, a one-armed postman. This is the first instance of a one-armed man competing in a bicycle race, and, as the distance was five miles, his showing was a good one. Mr. Clunich rides a wheel while serving his route, and is a familiar figure in Newark.

More About Johnson's Records.

John W. Evans of the American Trotter, writes the REFEREE as follows about the records made by Johnson on the kite track at Independence, Ia.:

"I notice in your issue of Sept. 30, under the heading of 'One mile in 1:56 3-5, the following: 'There were only one or two watches which were over 1:57, while several others were well under 1:56 3-5.' I would like to contradict this. When Johnson went his mile not one of the official timers had it over 1:56 3-5. Two had 1:56 1-5, two had it 1:56 2-5, and two had it 1:56 3-5. I was in the stand when they compared watches, and they decided on the slowest, which was 1:56 3-5. We can put up from \$1,000 to \$10,000 that he can come back and do the very same thing he has done. This will be a good chance for the people who doubt these performances to come here and make a little money if they have anything in the way of 'oof' to put up."

ENGLAND'S EX-CHAMPION.

Osmond the Disappointment of the Past Season.

Longfellow in Sport and Play.

There can be no disguising the fact that Osmond has been the disappointment of the past season. All his friends have been hoping that he would do something before the frosts came again worthy of his great reputation; this friendly patience has gradually given way to disappointment, his most faithful adherents have ceased to find excuses, and to day it has to be acknowledged that it is hopeless to expect the brilliant rider of 1891 to add to the laurels won so handsomely in the days that are past. The reflections of those who have honestly believed in his prowess and his capability of accomplishing a really great feat on the path may not be pleasant; but they are inevitable. It is out of my province to attempt to make excuses; but I may perhaps be allowed to add my keen regret to those which have been expressed in all quarters at his recent failures.

Our American visitor has proved himself such an exceptionally good rider that any attempt to deprive him of a vestige of the halo with which the American press has invested him would be unchivalrous. No! Zimmerman has won his honors; let him wear them as a conqueror should. They might have fallen into less modest and more unworthy hands. But although our cup of disappointment was well nigh filled when the championships were carried once more into distant climes, it was not overflowing, and we were all hopeful that Osmond would rise to the occasion, and, at least, uphold the reputation of English cyclists. We must not forget the one brilliant burst of "plucky little Harris." That, however, is another story. Some have given it out that Osmond's

system of training has been the wrong one; and other excuses have been made. He is, probably, not constitutionally strong, but when in August we saw him set himself going something after his old style, and leave his fellow competitors in the last lap of a mile handicap as though they were standing, we were amongst those who held the opinion that at last the hour and the man had come. When the great crowd at Aston cheered him to the echo, as he flashed past the tape a winner, we felt a thrill not often experienced.

Since then we have waited for his onslaught on the records at Herne Hill in vain, and we feel that it is too late for anything to be done this season. Of late we have heard a good many harsh expressions used concerning his comparative failures—nothing at all unusual from hero worshipers—but we may expect the same people to go to precisely the same extremes if Osmond should ever succeed in doing a big ride. Just now he is the recipient of plenty of advice—cheap, too. Forgetful, I suppose, that cycling champions are only human, all manner of "quacks" are prescribing, whose nostrums will, of course, be religiously avoided. Most of his Midland friends are bitterly disappointed; but most of them will wait a little longer before they begin to "throw stones."

The "Wheel" in Chicago.

The *Wheel* has decided to open an office in Chicago and has placed in charge Andrew Cahill, who has for over a year been connected with the advertising department of the *Bearings*. Mr. Cahill is well acquainted with the trade throughout the country and particularly in the west, so that the venture should prove advantageous both to himself and the paper he represents,

THE LATEST—TRIPLETS.

ALL FOR GOOD ROADS.

Legislative Candidates Place Their Views on Record.

Under date of Oct. 20, Secretary Prime, of the Illinois Highway Improvement Association, sent to the candidates for the Illinois legislature a circular asking for their views on the road improvement question, and a large number of answers were received. The circular explained its own mission and said: "The road question is above any politics, but we would like to know who are the men we can depend upon in the next legislature to help us in the direction indicated." The following questions were asked:

1. Are you in favor of convict labor to be used either in preparing material or for actual labor on our highways?
2. Are you in favor of, or opposed to state aid for road improvement?
3. Would you favor a modification of our present road laws that would enable townships and counties to raise money for road improvements by the issue of bonds?
4. Give us your general ideas on the road question.

Every candidate who answered the questions was most decidedly in favor of using convicts for improving the highways of the state, and all were greatly in favor of good roads. A few of the answers are given in full to show the feeling on the subject, and in addition a

list follows of those who have expressed themselves in a similar way:

William H. Olsen (Rep.), Chicago—Am in favor of convict labor to be used in preparing material or actual labor on our highways. Just as important for state aid in building roads as of other great improvements. Am in favor of a road law to enable townships and counties to raise money for road improvements by issuing bonds.

S. D. May (Dem.), Chicago—Am in favor of convict labor being used entirely both in preparing material for use of and actual labor on the roadways of the state. We have our board of agriculture, horticulture and railways. Why not our board of highways, possessing authority under the act creating it to enter on a speedy but permanent improvement of the roads?

J. Wiley Howey (Pro.), Newton—I have no sympathy with the idea that a lot of criminals should be kept wholly at the expense of the state. Let them earn their grub. Yours for less criminals and better roads.

J. H. Hackett (Rep.), Jacksonville—See no other solution of the vexed question in regard to convict labor except they be employed in some way looking to the improvement of our highways. Agitate, educate, and something better than we now have will result. The people are ready for a change and are seeking information so as to be able to act wisely when the time comes to make a change in our laws regarding highways.

Samuel Wood (Pro), Quincy—Am in favor of convict labor, to be used both in the preparation of material and actual work on our highways; favor any reasonable measure looking to the state aiding road improvements. Also a law enabling townships and counties to raise money for the same purpose. This enterprise should in all legitimate ways be fostered and encouraged. Good roads are a necessity to the best interests of the consumer and producer.

Albert Campbell (Rep.), Effingham—Am in favor of employing convict labor, both in the preparation of material and in actual labor on the roads of the state. This will give employment to the large number of convicts without bringing their labor in direct competition with non-criminal labor. Also in favor of state aid for road improvement where necessary. No objection to empowering counties or townships to issue bonds to improve their roads.

George W. Minier (Pro.), Minier—What better can we do with our convicts than put them to work for the good of the people? It will be for the good of those unfortunate men to give them labor in the air.

E. H. Griggs (Rep.), Chicago—Will be glad to co-operate with the friends of the highway improvement in any practical measure that promises to give us better roads in the country districts of the state.

C. J. Schultz (Pro.), Elgin—Use convict labor on our highways wherever practical. Favor state aid in road improvements; also law to enable townships to raise money for road improvement.

Others who had answered the circular and expressed themselves in favor of convict labor in road improvement were:

J. W. Drury, Dem., Waterloo; U. S. Ellsworth, Rep., Deer Park; W. C. Dean, Dem., Ava; L. K. Byers, Dem., Altona; George Murray, Rep., Elmira; Thomas H. Creighton, Rep., Fairfield; James Boston, Rep., Duquoin; J. Zimmerman, Dem., Mount Carmel; S. H. West, Dem., Arrow-smith; S. W. Seawell, Dem., Greenville; J. Huston, Dem., Blandinsville; John Holmes, Dem., Alta; C. A. Ambrosius, Dem., Collinsville; J. E. Miller, Dem., Belleville; J. H. Baer, Pro., Sterling; William Stuart, Dem., Dakota; A. G. McQueen, Peoples', Flora; P. Paddock, Pro., Raymond; E. T. Potter, Dem., Wilson; D. S. Berry, Rep., Savanna; George Pickle, Rep., Plainfield; George B. Winter, Pro., Onarga; George W. Curtis, Dem., Stockton; E. L. Henning, Dem., Plano; Hugh Greig, Pro., Oneida; J. M. Jones, Pro., Lafayette; J. A. Hoopes, Pro., Ipava; W. A. Moore, Dem., Morton; George W. Lucas, Rep., Mount Station; William Thieman, Rep., Itasca; B. A. Gower, Rep., Odell; W. I. Guffin, Re., Paw Paw; Henry M. Dunlap, Rep., Savoy.

The St. Nicholas Manufacturing Company has sold its entire output for next year to Hibbard, Spencer, Bartlett & Company and the George R. Bidwell Cycle Company.

FAILURES IN ENGLAND.

SEVERAL SMALL MAKERS ARE FORCED TO THE WALL.

Trade Generally Quiet Abroad, Though Brisk With Many—All Are Building Front Drivers—Preparing for the Stanley Show.

BIRMINGHAM, Oct. 22.—The threatened "bad time" in the cycle trade would seem to be upon us. During the last week or two quite a number of failures have been announced and several more are already talked about. Besides these several agents have been effecting private arrangements. The failures at this season last year were, as a rule, confined to agents who had stocked too heavily and were unable to meet their engagements. This year it is the manufacturers who are putting up the shutters, although those who have gone have not up to the present been people in a very large way of business. The biggest failure so far is that of the Basford Cycle Company, of Nottingham, people who only began trading last season and were supposed to have plenty of money. Their liabilities are a little short of £5,000 and their assets are estimated at about £2,200. Among the creditors are, I believe, the Pneumatic Tire Company, for an amount of something like £600. The Maxim Steel Tire Company, the Orient Cycle Company (T. T. Sims) and the Cornbrook Cycle Company, all of Birmingham, have also failed and executed deeds of assignment, and Frankenstein & Company, the saddle and accessory makers and platers of Coventry, have within the last few days stopped payment. In this case the liabilities are over £2,000 and the assets reach £900. The firm had an overdraft from the bank of something like £1,100. There are several other affairs which are very shaky, and I should not be surprised to hear at any moment of another half-dozen failures.

OTHERS DOING WELL.

In the midst of all this it is very satisfactory to hear of the good business which is being done in a quiet way by several firms. Among these is the Quinton Cycle Company, which, with an order of two thousand machines from the Bretz-Curtis Company of Philadelphia, to be going on with, has already all its hands on at full time. What with a fire which destroyed its premises just as it had got a fair hold on the trade, and other misfortunes, the Quinton firm has had more than its share of bad luck, and I am pleased to see that it is now obtaining the success which the perseverance and conscientiousness of its principals deserves. Instead of paying a big dividend this year the directors have been content with a moderate return and have placed a substantial sum to the reserve fund to provide for future emergencies.

HUSTLING FOR BUSINESS.

There has been quite an exodus this week from London of the cycling journalists and advertising representatives. They have with one accord fled to the Midlands, where they have been scurrying round to the factories in anticipation of the Stanley show. At present a cycle manufacturer's lot is not a happy one. He is doing nothing all day besides describing his novelties for next year—of which, practically, he has none—to the reporters and declining to listen to the blandishments of the canvassers who wish to book his order for advertisements. In Coventry this week I saw

Messrs. Maycock and Browett, of the Coventry Machinists' Company, who have returned well satisfied with the result of their visit to America. B. Riley is also back from his travels on behalf of Bonnick & Company, and expresses himself as being very well pleased with the outlook of the trade for City cycles in the States.

TIRE MAKERS VERY BUSY.

The tire makers are probably the busiest people in the cycle trade just at present. This week I had an opportunity of trying the new Clincher tire, which is being put on the market by the North British Rubber Company. It is a great improvement on the old pattern. It is two and one-half pounds lighter, and is faster and is more resilient. In spite of these advantages it is just as easy of repair as the Clincher always was from the first. The Fleetwood has also been much improved, being lighter and more simple than it originally was. Yet although the opposition is so much greater the Dunlop people have already taken far more orders than they had on their books this time last year. George Ducros, the youngest of the family who are so much concerned in the company, is at present over from New York and is

ous feature. Hundreds of provincial clubs have passed resolutions promising support to the show. Numerous excursion trains have already been arranged for on the northern lines. The invitation Bohemian concert, given this week by the Stanley club, aroused great interest amongst the metropolitan clubs, which were well represented.

LONDON'S CYCLING LANDMARK.

Goy's is the name of one of the oldest and best known cycle agencies in the city of London. Twelve years ago it was hither I went to order my first bicycle. To-day the flourishing west end cycle depot, situated in Praed street, near the Edgware road, forms an important local centre in the London wheel trade. For at Goy's one may view a good selection of most of the best makes found on the viaduct, besides the Fleur de Lis and Witch, two machines made and sold by the firm. The Witch appeared at the beginning of this year, as a sound, up-to-date, second-grade mount, and its success has proved phenomenal. With one or two trifling modifications it will take its place amongst Goy's 1893 models, which, as usual, will be found at the Stanley show. In response to inquiry I learned that the firm would take

THE EADIE F. D. SAFETY.

This wheel has, in its short life, received a great name. The frame is very rigid and does not have "that back wobble," as the maker, the Eadie Manufacturing Company, Hunt End, Eng., says. The machine was specially designed by R. W. Smith, the works manager. This company also makes several other handsomely-designed wheels, and may, another season, try for American trade.

learning the whole mysteries of the new tire at the Coventry factory.

NEW SCHEMES TAKING.

There seems to be a "boom" coming along in two-speed gears, affairs which a couple of years ago were laughed at and classed with gear cases as unnecessary fads. There also seems to be little doubt that there will be a shoal of geared ordinaries and front driver safeties on the market next season, and in this connection it is worthy of mention that a firm of Birmingham engineers is sending out hubs beautifully made with Crypto gear, and charging just £1 each less than the Crypto firm is getting for theirs. The Birmingham people declare that there are no patent rights in the gear, and from what I know of the matter I am inclined to think they are right.

[From another correspondent.]

LONDON, Oct. 22.—Over 310 firms have taken space at the Stanley show, which will be by far the largest on record. A large amount of space will be occupied by firms exhibiting machinery, whilst the photographic section, containing displays of photographic apparatus and materials, as well as a show of work by amateurs and professionals for which medals are offered, will form a conspicu-

ous feature. Hundreds of provincial clubs have passed resolutions promising support to the show. Numerous excursion trains have already been arranged for on the northern lines. The invitation Bohemian concert, given this week by the Stanley club, aroused great interest amongst the metropolitan clubs, which were well represented.

OTHERS SHOWING THE F. D.

For a long time the viaduct gave no sign that anything in the form of a front-driving safety occupied the thoughts of riders—except, of course, at No. 1, where Marriott & Cooper's geared ordinary was to be seen. The second firm to expose on view the novelty was the Rudge Cycle Company. During the last week two more well known houses have been awakened from their indifference towards the rear-driver's rival, and have each displayed samples of front-drivers in their windows. These are James Vallentine & Company, Ltd., makers of the Spartan and agents for the Whitworth, and the Coventry Machinists' Company. The Spartan front driver presents an excellent appearance, being on almost identical lines with the Crypto—with whose gear, by the way, it is fitted. It is a full roadster with brake, Preston Davis tires, thirty-six inch (geared to sixty) and twenty-four-inch wheels, and weighs thirty-six pounds.

A SWIFT F. D. SAFETY.

The other front-driver, which has been tried by both Holbein and Shorland, is also fitted with the Crypto gear. It has thirty-six-inch and twenty-two-inch wheels and scales about thirty-six pounds as a full roadster. It has a neat appearance and will be on view at the Crystal Palace show in January. The Coventry Machinists' Company contemplates, I hear, opening a factory at Richmond, Ind., U. S. A., for the production of their present English patterns for the American market.

Stepping eastwards the other afternoon I had a brief chat with the manager of the Metropolitan Machinists' Company, of Bishopsgate street. Like the peacock popinjay proudly born in the "Yeoman of the Guard," this gentleman "turned up his noble nose in scorn" only a few months ago at the idea of a front-driver proving a generally adopted model for 1893. Now, however, he has been led to alter his views, having already had to execute orders at the request of customers. The company will make a Crypto-geared f. d. safety for next year, and will show the same at the Crystal Palace.

HANDLES PERRY'S GOODS.

Messrs. Brown Brothers, of Great Eastern street, E. C., had several novelties to show me when I recently called. It will be remembered by your readers that this firm is the London agent for Perry's fittings, and supplies everything that can be mentioned in connection with cycle making. Of course, in addition to the Crypto gear, they stock the Perry gear. The latter, however, is about to be withdrawn from the market, as Perry & Company have adopted an improved form. In the meantime orders received for the gear so extensively advertised of late are being held over. Perry's new light pattern cheap hubs are marvels of good finish and excellent quality, and make the old pattern feel very heavy and clumsy by comparison. Then there is the new Perry pen steel bush chain for Perry Humber racing hubs. This is light, perfectly finished, strong, moderate in price, and where a Carter gear case is used, suitable for road work.

TO REPAIR BOOTHROYDS.

The Boothroyd tire for 1893, when examined in sectional form, is found to be slightly thinned at the sides. For the relief of those "unfortunates" who possess porous tires, (i. e. Boothroyds which, owing to an internal defect, undiscoverable by test, leak at countless spots from one or two interior pin-holes and refuse to be repaired), Brown Brothers have produced Boothroyd's solution sold in tins at thirty-six cents. A tin full of this jelly is heated in hot water and pumped into the tire, which never leaks again until punctured *de novo*. Something of this kind has long been wanted and will prove welcome alike to riders and agents. Stand No. 198 at the Stanley show will see Brown Brothers and all their wares in bewildering variety.

Mr. F. H. E. Cooke, of 40 Brunswick Square, W. C., has patented and is placing on the market a new powerful pump for pneumatic tires. It is not too long to be portable and its novel feature consists of a chamber in which may easily be carried a sufficient quantity of repairing materials to serve the needs of any user of the 1893 Dunlop. STANLEY.

L. S. Kingman, son of Martin Kingman, returned last week from a six months' trip through Europe. Mr. Kingman visited all the cycling centres, and the information gained will be of advantage to him in his present position with Kingman & Company, Peoria.

RED RIMS FOR 1893=THE RUDGE

As has been announced before, we are now the exclusive manufacturers and importers of the RUDGE for the entire United States, and are rapidly getting things into shape to turn out the American Made Rudge in the highest style of the art. We now have in transit parts and materials for 500 machines, which we shall put together in the very best possible manner immediately upon arrival, thereby giving us enough machines to furnish our agencies with samples before the first of January. Every possible care will be taken to build the very highest grade machine that has yet been turned out by the Rudge Company, and special pains and care will be taken in the finish of same. In this department we thing that has yet been done in America. polish before the nickel is applied, and will peeling nickel, thus assuring an everlasting highly polished frame by expert carriage finest point. The machines will all be striped have Red Rims.

have made every preparation to surpass any. Each bright part will receive a regular silver be plated with a very heavy coat of non-luster. The enamel will be applied to a finishers, who have that work down to the with a fine gold line and the Racers will all

We are now prepared to place agencies for large or small territory in all parts of the United States, with a few exceptions. Our MR. PATEE will start out over the territory in a very few days, and reliable firms, desiring a really FIRST-CLASS HIGH-GRADE MACHINE on which they can have exclusive territory, will do well to correspond with us at once.

ROUSE, HAZARD & COMPANY, 89 G Street, PEORIA, ILL.

The Cook County Wheelmen give an oyster supper this Saturday evening.

The Cook County Wheelmen give a hare and hounds chase on Thanksgiving day.

A hare and hound chase will be given by the First Regiment Cycle Corps Thanksgiving day.

The Lincoln Cycling Club has postponed its Japanese smoker, scheduled for this Thursday evening, for one week.

Englishmen would probably never believe that at Chicago's recent tournament Messrs. Sheridan, Rouse and Lennie varied only once in timing the great number of contests; yet this is so.

The Century Road Club holds a meeting this Thursday evening in club room "A" of the Grand Pacific hotel, to adopt constitution and by-laws and authorize a mail vote for officers.

Kinkead of the Lincolns has thirteen century bars, Porter of the Illinois has an equal number, Newman of the Lincoln's has fourteen, and thus far tops the list of Chicago centurians. John Erickson of the Columbia Wheelmen has an even dozen bars.

Gilmore's celebrated band is announced for five popular concerts at the Auditorium, Monday, Tuesday and Wednesday evenings, and Tuesday and Wednesday matinees, Nov. 14, 15 and 16. The band now numbers 100 musicians, and is the largest organization of the kind in Europe or America. Miss Ida Klein, soprano, Signor Tagliapietra, baritone, and A. L. Guille (late of the Patti opera troupe),

tenor, will appear in vocal selections at the concerts. The sale of seats will begin Thursday, Nov. 8.

Members of the Lincoln club who finished the annual century Sept. 4 have received from their club solid gold scarf pins, embossed in chased gold letters, "Century, 1892." These are the handsomest and costliest century survivor souvenirs given this season.

W. C. Anderson is gathering together the Chicago club foot ball team for the annual game Thanksgiving day with the south side Illinois Social Club at Washington Park. In the team will be found the following well-known cyclists: A. E. Lumsden, J. P. Bliss, W. C. Anderson, James W. Thorne, Harry Hanford, H. Bingham, H. Tobey, M. Hunt, McGilvery, Sherman and Ritchie.

The Minnette Cycling Corps will shortly put a team in gymnasium training, under John West, who will represent them on the track next season. It is said they have captured C. D. Cutting, the Cook County Wheelmen's best man, and Otto Maas, of the Illinois Club, who has the right stuff in him but needs a man like West to bring it out. H. M. Stringer, the likely young Elgin flyer, and J. B. Woolas, winner of this year's Pullman, are the other two.

Frank Waller, ex-champion of the world at twenty-four hour riding, of San Francisco, came into town last week. Mr. Waller intends making Chicago his home and training ground for next year, when it is his intention to go to London for the great Cuca Cocoa cup twenty-four hour race, July 24. Mr. Waller does not belie his pictures. He is a tall, good-natured German, large of bone and sinew and scant of flesh, weighing only 156 pounds. Harry Leeming, an old friend, took charge of him at once and is going to train him during the

winter for the big race. Waller is dissatisfied with his own showing thus far, and thinks he is capable of lowering the present record, 421 miles.

The "Two-Fifty Club" of Chicago has resolved itself into an organization of veteran racing men. The original score of members who won the honor of a membership did so at a time when to ride under 2:50 was a great honor. Nowadays, when to ride in that time is only ordinary, the members refuse to admit more and will only admit a member providing he wins the annual New Year's day scorch to Pullman, an unlikely occurrence this year at least. The annual run will be held next New Year's day, to which all cyclists are invited, the winner being decorated chief scorcher for 1893.

Buffalo Club Doings.

BUFFALO, Oct. 31.—The Comrades C.C. held its donation party on last Thursday evening. It was well patronized, and many handsome and valuable presents were received from the friends of the club. The room on which these articles were displayed resembled a fancy fair, the collection of tidies, pictures, table scarfs, banners, clocks and other articles of furniture giving the place that appearance. The guests were many, and the well-appointed dance hall at the top of the building was comfortably filled. A programme of dances kept the large assembly amused until 11 o'clock, when supper was announced. Each person was supplied with a kazoo, and the march to supper was, as may be imagined, quite inspiring and tuneful (?). Taken all-in-all the entertainment committee has good reason to feel satisfied with its work. The Comrade C. C. next season intends leasing the entire floor, of which it now occupies but a part, and to fit up the rear room with baths and lockers. The location being close to the training

grounds is most desirable. The captain is most ambitious and hopes to have fifteen men in good condition and in such shape that they will be eligible for entrance to the Martin road race next Decoration day.

The Buffalo B. C. is in for a jolly time on election night, as it has made arrangements to receive returns by special wire, and will entertain its invited guests with luncheon, music and the many attractions offered by the club house.

The condition of the streets was such that wheeling about town was fairly good yesterday, but that was about the extent of it, as the rain of the previous night had dampened the roads and prevented all attempts at country riding.

WILLIE DUNN.

League Membership to Date.

The total league membership is now 31,970. Last week California sent in 115 new names. The standing of the leading divisions follows:

Massachusetts.....	4,586
New York.....	4,146
Pennsylvania.....	3,404
Illinois.....	2,610
Ohio.....	2,566
Connecticut.....	2,546
New Jersey.....	1,780
Michigan.....	1,259
California.....	968

Mr. Snell and the Typewriter.

Samuel Snell tells a good typewriter story. A year ago, while returning to England, he became acquainted with a typewriter agent, who presented him with a machine. Mr. Snell got a girl who soon mastered the "Yankee notion," and her first task was to send out bills. One was sent to a young Irish tradesman, who evidently had not seen a typewriter or its work, for he sent back a protest to the effect "that he would sue the firm if they ever put his name in print again."

Mr. Snell Is Here.

Samuel Snell, of lamp fame, is in New York, arguing with Uncle Sam's tariff employes, and threatening Uncle with a damage suit if he don't rush some very excellent samples of parts, saddles, etc., through the customs line. Mr. Snell is thoroughly cosmopolitan, and rushes around Wall street and Broadway with the same unconcern as he would the famous Birmingham "Bull Ring." Mr. Snell will settle in this country and will shortly send for Mrs. Snell and the little Snells, who are expected to grow up with the country. Incidentally Mr. Snell will remind you that his change of residence was not exactly determined from a health standpoint. Mr. Snell is out for cash prizes and will get them, too. Keep your eye on the ex-Birmingham illuminator. J. B. Brooks' saddle for '93 is one of Mr. Snell's specialties, which weighs twelve ounces, and is covered by American patents. A patent adjustment to save a pin, saving four ounces in weight. A patent tilting arrangement, which is claimed to be the most correct yet introduced. A skeleton frame made of best steel, and a really clever sliding device for shifting the saddle to suit the rider, being operated by thumb pressure. The saddle is called "Brooks' '93 Scorching Racer Saddle." It is a gem, like all the Brooks saddles.

An Eye-Opener Coming.

From the Triumph Cycle Company, Coventry, we learn that Mr. Bettman has something startling in the 1893 pattern Triumph. The new Triumph bottom bracket, dust-proof and air-tight, will be an eye-opener. The ladies' Triumph, a cut of which is shown herewith, and which weighs but thirty-six pounds, all on, is a beauty in the opinion of connoisseurs. They have christened the new racer the Chicago Triumph.

Ready for Business.

The Eclipse Bicycle Company is getting its new factory at Beaver Falls, Pa., into shape, and will have the first wheel out in a few days. With the facilities which this company will have for turning out wheels, and with the full determination that its wheel shall be inferior to none, the trade may expect to see the Eclipse standing in the front rank. Special steel has been made for use in this wheel.

Prosperous Buffalo Dealers.

The dealers are rubbing their hands, patting complacently their fat pocket-books, admiring their swollen bank accounts, and dream of palatial residences to build at the close of next season's profitable career. Yes, quick sales, prompt attention, rapid delivery after purchase or order, and few repairs have had a great effect upon the past season's investments in wheeling trade, and there is a general satisfaction among all dealers. Of course there are some who are not all happiness at this time of year. There must be some of this kind, and they will tell you all about how through injudicious contracts, advertising, sales and poor clerks, this season has been most unsatisfactory. But next year will find these very same unsatisfied-ones in

another boat, as they will certainly profit by their mistakes and poor management.

The firm composed of Vincent and Broadbent, under the title of the Vincent Cycle Company, has been dissolved, Mr. Broadbent continuing in the retail cycle business at the old stand, at least for the present. Mr. Vincent will engage in the manufacture of cycles at Gardenville with the Schoeflin Brothers.

H. C. Martin & Company have had a most profitable season, and they have been carefully looking out for the next, and will be equipped with a large supply of all the first-class wheels, enabling them to meet all the demands, both wholesale and retail.

G. C. Sweet will still be agent for the Victors, and next season will have them of all weights, for the path and road. The Overman company having decided to send out in the "D" model a track or racing wheel of twenty-four pounds, a road wheel of thirty pounds, and an all-round wheel for general use of forty pounds.

Castle, agent for the Singer and Hummer line of wheels, feels that he might

was not a complete destruction of the works, and that they were able to start up on the 28th. In a couple of weeks they hope to be well under way. Just previous to the fire a large part of the machinery had been moved into the new building, which was not affected by the fire, and which contained a separate engine and boiler.

Michigan Trade Affairs.

The bicycle trade in Detroit still holds on firmly. Dealers have just passed through an excellent season, in fact the best ever experienced. Huber & Metzger handle the Columbia, Hartford and Hickory, and on these wheels they report a large sale. George Hilsendegen handles Centaurs and has done an enormous business the past season. He is much pleased over last year's business, and will push the sale of his wheels in '93. He will do a general jobbing business, and has already secured the state agency for two well known makes. Peterson Brothers, the Anderson Manufacturing Company and T. B. Rayl & Company have all had a good trade this season. Detroit has some of the finest drives in America, and the bicycle business has indeed a very bright future. Woodward avenue is now being paved with asphalt, three miles of it being already completed. A boulevard twelve miles long, extending around the city, is now almost completed, and by next

and splendidly constructed. While on his travels Mr. Weaver attended several meets and always found some one anxious to ride his sample wheel. The result was that this one racer has captured almost every race in which it was ridden. It was on this same wheel that Mont Scott captured second time in the Boston A. A. twenty-five mile road race, and defeated such cracks as Berlo, Van Wagoner and Hazleton. The company will build about 3,000 wheels this season, but will turn out more if necessary. Mr. Weaver has been very successful so far, having placed orders for several hundred machines, one being for 500. He is now on his way south.

A New Western Production.

A chainless safety was shown in Chicago to a chosen few last week. The inventor, a southern Wisconsin man, wished his name withheld. The machine as constructed consisted of two crank brackets. These were connected on the left side by two cog-wheels turning into each other. On the right side of the back bracket and opposite the smaller cog-wheel a two inch crank was passed, which by means of a lever working in a ball-bearing socket attached to the bar frame, turned a two-inch crank that drove the rear wheel. The joints were simple and all ball-bearing, and the entire apparatus, brightly nickelled, presented a handsome appearance. Held away from the floor and started, the wheel ran much longer than the average chain safety and perfectly free and noiseless.

A Fine-Looking Wheel.

Charlie Gorman, now with the Quadrant Cycle Company, has constructed a model, with a view to future manufacture, one of the handsomest and best proportioned safeties seen this season. It resembles in but a very slight way any wheel on the market. The wheel base is forty-four inches; the frame deep, being twenty-two inches from the seat post to the crank bracket, and yet the crank bracket is fourteen inches from the ground. The pedals clear the floor nearly eight inches. The wheels are twenty-eight-inch rear and thirty-inch front, constructed of light wired spokes and light rims, and fitted with Morgan & Wright tires. The fork crown is double, similar to that of the Quadrant, and the forks are oval. The head has a depth of twelve inches. The tread is narrow and very well braced, as is the frame in every way. Stripped and with a scorching saddle and racing dropped handlebars, the wheel weighs but twenty-seven pounds. Every atom of workmanship on the machine was done by Mr. Gorman, even to the hubs and other parts. The wheel was constructed during odd moments and of evenings, and represents his views after an ordinary lifetime in the cycle business.

Victors for 1893.

In the recent long-time sale of Victor and Credenda wheels inaugurated by A. G. Spalding & Brothers, about equal numbers of Credendas and Victors were sold. The sale was the most successful ever held by A. G. Spalding & Brothers. No samples of the '93 pattern Victors have been received. The traveling men will start as soon as they come. So great a branch has their cycle business grown that W. T. Brown, a member of the firm, has decided to take charge of the wholesale portion of the trade.

Increasing the Facilities.

Morgan & Wright are now building a large addition to their factory in which the offices will be located. Immediately upon the completion of this building the

THE "P. & M." SADDLES.

The "P. & M." Century saddle has been received with great favor this year by some of the racing men—for instance, Windle, Taylor, Tyler, Taxis, Murphy, Wheeler, Hess, Berlo and others. The saddle weighs under a pound and is guaranteed. Many of the big eastern makers have adopted it for their 1893 wheels. Mr. Persons, of the Persons & Muller Manufacturing Company, will be at the Grand Pacific hotel, Chicago, with samples. He will also show a splendid three-coil spring saddle, light and very simple.

have done better if he could have had a larger supply of Humbers, but hopes that for the coming year the output will be large enough to satisfy all demands.

The Bison Cycle Company will have a centrally located store on the east side of Main street, and will dispose of the entire output of wheels manufactured by Messrs. Gibson & Prentiss. This company is made up of B. M. Ripper, H. C. R. Jenke, William Tepe and J. F. Stenzel, and will have control of the entire western and central part of New York state. The middle of January will undoubtedly see this company fully established in its new home. Mr. Ripper is now making quite an extended trip through the company's territory looking up its interests. This new firm will be permanently located at the fine, large store, 561 Main street. It is needless to remark that the Bison for next season will have several improvements, and changes will be made in the frame, making, if possible, a finer and better wheel than that of the past season.

WILLIE DUNN.

The Damage Was Small.

We are in a position to announce in this issue that the burning of the machine shop of the Indiana Bicycle Company was not as serious as some people thought. Mr. Smith has written to a house in Chicago saying that the fire

season Detroit will have more miles of streets for bicycling than all the rest of the state's cities put together.

Hodson & Howard of Detroit have about decided to close out their bicycle department. They are heavy hardware dealers and handle wheels only as a side line. They have been very successful with what wheels they did handle, but lack of room compels them to drop out.

The Grand Rapids Cycle Manufacturing company of Grand Rapids will soon have samples of its new scorching. The wheel weighs thirty-four pounds and lists at \$125. It is a very fine wheel, and Mr. Wilmarth, the manager, says their output is almost sold. They found a ready sale for their '92 product.

The Detroit Cycle Company is the name of a new bicycle company which is about to open its doors in Detroit. It will handle a full line of high and medium grade bicycles, and will carry a complete line of sporting goods and sundries. The firm starts out under very favorable conditions.

C. COLUMBUS.

The Eagle For 1893.

F. E. Weaver, the popular young representative of the Eagle Bicycle Manufacturing Company of Torrington, Conn., has been in Chicago this week in the interest of his company. He showed a twenty-seven pound straight diamond frame wheel, exceedingly neat in design,

NO, THANK YOU, WE DON'T WANT THE EARTH.

Unlike some people in the Bicycle business (who are not satisfied with less than 100% profit) we always try to make—

CLOSE FIGURES on all of our Wheels, knowing that we are giving full value for the money, and that—

A GOOD JUDGE can readily see we are making—

A BIG OFFER when we sell a High Grade Pneumatic for \$90.00 that would cost you \$135.00 elsewhere.

COLD DRAWN WELDLESS STEELFACTS AND LOW PRICES,

TWO VERY ESSENTIAL POINTS FOR BICYCLE RIDERS TO CONSIDER.

SEND FOR CATALOGUE.

ST. LOUIS, MO.

THE MORGAN & WRIGHT TIRES

Have now been before the public for one year, and it is upon the record which they have made on road and path that we must base our claim to further patronage. We trust it will be remembered that we have never made exaggerated claims for our tires. As we have always held the opinion that such claims, in the present state of the art, would be premature. We are still seeking improvement in our tires, and have the satisfaction of seeing those we have made during the past year imitated and copied by a number of makers whose ideas as to what constitutes a good tire have not in the past met with public approval. We have seen letters and heard trade arguments put forth by our competitors, who are now copying our tires, to the effect that they are using better material and making better tires than we can produce. We are perfectly willing to leave these claims to the test of time.

We ask our friends and patrons, however, to consider carefully these claims of superior quality and material. The selection of material for the **Morgan & Wright Tire** has been the work of over a year, and after innumerable tests in our factory and on the road, we have made such changes as experience has shown to be needful. During the past year we have made all repairs free of charge, and this has enabled us to learn from the experience of thousands of riders throughout the United States the weak points in our tires, and the public can rest in confidence that we know more about the quality of our goods and what is necessary to produce a perfect article than competitors who simply copy our methods and depend upon the stretching of a **SAMPLE** of rubber, before the eyes of a customer, to convince that they have more ability as rubber manufacturers. The head of our concern has been an experimenter in rubber fabrics for twelve years, and the business of our concern has been built up from very moderate beginnings, under the pressure of necessity. We do not claim superiority over every one on earth, and we are still experimenting, as we wish to keep up with the times. We shall never descend to detraction of the goods made by others; and what we have to say is in self-defense, against trade arguments being used by competitors, which, should they appear in public print, would give good grounds for an action for libel. We can assure our friends that we use the best material obtainable, that we shall improve our tires just as often as experience points the way, that we have manufacturing facilities and abundant capital to fulfill all our contracts, and with this we know we shall receive all the patronage which our product may deserve.

We have applied for patents on our tires and have every reason to believe that our work of the past year has discovered patentable features, and that our claims to such will be allowed.

All tires made by us after November 1st will be branded with our firm name and be marked "Patent applied for."

MORGAN & WRIGHT, CHICAGO.

part of the factory in which the offices are now located will be torn down and a new building built on the site. In many other ways the plant is to be enlarged to keep in line with the vastly increased trade. Morgan & Wright have been engaged in exhaustive experimenting and will soon present to their friends improved tires.

The Novelty Trouser Hook

Kingman & Company, Peoria, have the exclusive sale of the Novelty trouser hook, a cut of which is shown herewith

We have not seen the hook, but judge it to be a very handy little affair, as it folds to a very small space. They are put up in a neat case and sell for twenty cents a pair.

To Build a Racer.

The Marble Cycle Company, of Plymouth, Ind., is reported to be in preparation for placing on the market 6,000 wheels next season. A racer recently completed weighs twenty-two pounds, and is one of the handsomest yet seen. The Scourcher is to weigh twenty-eight pounds, and road wheel thirty-five pounds. Next year's design is to be somewhat changed from the present. The crank hanger will be lowered to a level with the axle of the rear wheel, the wheel base will be shortened a few inches and the frame is to be an exact counterpart of the Humber. The Marble Cycle Company, in securing George K. Barrett as representative, has a hustler, and other good men are being corresponded with. Frank Waller, ex-champion twenty-four hour rider, is now in their employ at the factory, and will push their wheel next season.

A Strong, Light Rim.

Probably no rim now on the market excels the new rim of Barton & Loudon, of Coventry, for strength and lightness.

The brace in the center prevents a chance of buckling, and because of this it may be made extremely light.

The New Starley Gem.

Arthur A. Taylor, of the Taylor Cycle Company, of Chicago, landed from the Teutonic at New York Thursday last, and reported a rough passage. Mr. Taylor had among others for fellow passengers, Millionaire John W. Mackey, Marshall Field, Wilson Barrett, the actor, Dan Lamont, ex President Cleveland's secretary, and Peter Jackson, the story prize fighter. In a talk with the REFEREE the successful young agent said his trip to England had been a delightful one, and having secured nearly all the territory in this country for Starley Brothers' revelation in an 1893 safety, he felt good, and was confident he had the right thing for America in safe lies.

The REFEREE man was allowed a peep at the latest Starley gem, and it is really a wonderful twenty-eight-pound road

machine, with a frame devoid of forgings, and of wonderful strength and simplicity. The spokes and hubs look heavy enough for a forty-five-pound wheel. The '93 Psycho will be seen in many a road scorch next year. Starley had a nineteen-pound racer Taylor loved very much and wanted to buy, but it was not for sale. Mr. Taylor has appointed the Bidwell Cycle Company his New York agents.

Stokes Did a Big Business.

The C. F. Stokes Company has sold over 18,000 medium grade wheels this season and has cleaned out all the great stock of ordinaries on hand early this season. On Tuesday a purchaser wanted a 16x5-8 solid tire and Herrick offered to sell him the tire at the old list price, throwing in the machine to bind the bargain. Poor g. o. o.!

Rouse, Hazard & Company in Chicago.

It is rumored that Rouse, Hazard & Company, of Peoria, intend opening a magnificent retail store in Chicago for the purpose of pushing the Rudge, which wheel they manufacture in this country the coming year. Fred Patee will probably be installed as manager, and rumors say further that the factory is also to be in Chicago.

To Increase the James Output.

The James cycles are in great demand in the States, and strange as it may seem, when manufacturers are now for the most part crying out at out the slackness of trade, Mr. James is in an entirely different position, having cleared out nearly all the machines from his works in Simpson road, Birmingham. Mr. James is a cute man or business, and in order to get over the difficulty and evil effects of laying in a large stock of machines during the close season, he undertakes to build and turn out wheels of the most modern type within seven days from the date of order — *Northern Wheeler.*

All Are Hustling.

E. J. Day, manager for R. L. Coleman & Company, New York, is in Chicago, looking at the Western Wheel Works 1893 effort for his company's trade. George H. Pixley, the head traveler for the Coleman company, is on the road in New England, and reports business as good. Pixley is no relation to the Omaha Pixley, but is quite a flyer, and will enter road races next season in the lightweight class. H. L. Drullard, of the same company, has just returned from a southern trip. He says election excitement is felt there in trade.

The New Raleigh Factory.

The new Raleigh factory, on Bank and Greenwich streets, is a buy places these days. Manager George S. McDonald piloted the REFEREE man through recently. He commenced at the office, which is directly at the entrance, and a view of all the factory can be obtained from its windows. The new machinery is all in place and the nickel-plating plant is ready, while the two large enameling ovens are yet in a state of construction. Mr. McDonald says in case more room is needed the main floor will be used, but he thinks the company can handle all the 1893 demand in its present quarters, which are large, light and airy.

Maltby Fooled Bowman.

Sydney Bowman, successor to Bowman, Maltby & Collins, is angry at W. S. Maltby. It seems Maltby ordered some outriggers for his new beginners' machines, to be built to his orders, but when built did not answer the purpose

and would not work. Maltby declined to pay for them, so Bowman held his trick wheel. Maltby, in Bowman's absence, procured a key from the office, searched the cellar, found his wheel and marched off. Bowman is wrathful and promises to make it warm for "the professor" when he returns to New York. In the meantime Maltby is sniffing the balmy air of the Pacific, en route to Honolulu, but will return to New York in the spring.

A Big Saddle Contract.

Rouse, Hazard & Company, Peoria, closed a contract last week with Rich & Sager, Rochester, N. Y., by which they secure the exclusive sale of their entire line of saddles for all territory west of Pennsylvania and south of the Carolinas.

The Sager saddles have rapidly sprung into prominence owing to the special features they possess. Each and every one is hand-lasted and therefore perfectly formed, while the adjustment is simple and effective. They are light

and neat in appearance and are made in both spring and scorch patterns. Rouse, Hazard & Company have placed an order and will push the sale of these already popular saddles in their territory.

Chicago Trade Jottings.

The Taylor Cycle Company has the United States agency for Psychos.

George K. Barrett has an idea in tire construction and has applied for a patent.

The C. F. Stokes Company closes its Drexel boulevard store on Nov. 1 for good.

Tuesday, Nov. 1, the cycle houses along cycle row began closing at 5 o'clock.

The Stover ladies' wheel for '93 is to be a straight frame similar in design to the Humber.

John O. Blake, manager of Gormully & Jeffery's retail store, is in the east on business.

Horace Bell is again managing the Humber-Rover Cycle Company, vice, John G. Hoitt.

The March-Davis Cycle Company moved to Canal street this week, where it has more space.

Manager Hughes of the Quadrant company returned from Philadelphia on Tuesday of this week.

Frank Lincoln has left the employ of the Taylor Cycle Company, and W. C. Anderson is now with them.

Last week a Wabash avenue dealer disposed of a cushion-tired wheel for \$13, and spot cash at that.

The Chicago Bicycle Company has closed a contract with an eastern firm for 1,000 Lady Worth wheels.

A. W. Moore, with Hibbard, Spencer, Bartlett & Company, resigned Nov. 1 to open an office in this city as United States agent for the manufactur-

ers of the Irwell safety, and as western agent for William Read & Sons.

Harry Pound, of Gormully & Jeffery's retail store, is very sick with diphtheria at his house, 216 Cass street.

James Josephi left Saturday last for an extensive trip east in the interests of the Ames & Frost company.

W. H. Hence, of Freeport, was in Chicago last Thursday on his way home from a two weeks' trip in the east.

Kirkwood, Miller & Company's line of wheels will be handled in Chicago by Ralph Temple, Twenty-second street.

Chicago is to have another cycle factory next season, the formators of the company wishing little said at present.

The Woodruff & Hanchett Company, of this city, will handle Monarchs this season, and have placed an order for 500 of these wheels.

The Chicago Bicycle Company has recovered the wheel recently stolen from 305 West Jackson street, and the thieves are now in jail.

A. Featherstone is showing a Road King in his Wabash avenue window which is enameled in terra-cotta. Even the tires are of that color.

Robert B. Abbott, late secretary-treasurer of the Clark Cycle Company of Baltimore, has entered the employ of the Hill Cycle Company, of this city.

Fred Donle, formerly connected with Rankin & Company, Providence, passed through Chicago Tuesday for St. Louis, where he will in the future reside.

Gormully & Jeffery have ordered tires to the amount of \$150,000. Their tire is being infringed on and suits will be started soon to protect their rights.

C. B. Tewksbury, of Westboro, Mass., representing J. A. Hunt & Company, is in the city this week with an extensive line of saddle and cycle accessories.

Thorsen & Cassady have concluded arrangements with the Western Wheel Works for 1893, and will, as last year, be one of the five firms to handle the entire output.

The new Worth ladies' wheel will weigh thirty-two and a half pounds with twenty-eight inch wheels. The company has booked one order for 1,500 of its wheels.

R. B. Abbott, late secretary-treasurer of the Clark Cycle Company, Baltimore, has accepted a responsible position with the Hill Cycle Manufacturing Company, Chicago.

An unfounded rumor found its way into the mouths of habitues of cycle row last week that Schoverling, Daly & Gales had bought out the Humber-Rover Cycle Company.

J. Hoyle, the veteran repair man, 5 and 7 East Madison street, has secured the western agency for Bayliss, Thomas & Company's Excelsior wheels, and expects to sell 5,000 of them.

Mr. Straus, of the New York Belting & Packing Company, has been soliciting patronage for his tire among Chicago manufacturers for the past ten days. Representatives of nearly every tire manufacturer are now in Chicago.

H. J. Casady, of Thorsen & Cassady, says that the repairers scattered throughout the country need instruction in tire repairing before the pneumatic can prove a success universally. Now it is a case of send every punctured tire to the manufacturers, and a long, stormy wait for its return.

E. L. Ferguson, manager of the Western Cycle Company, 253 Ogden avenue, says the season's business has been fully up to expectations, and as good as the former season in the old stand on Madison street. He sold fifty Greyhound

NO MORE WALKING.

Our '93 Protection Strip Tire

When punctured closes itself in most cases ; if not, an ordinary puncture can be repaired on the road in a few minutes, without taking the tire from the rim or removing the protection strip, by means of inserting

OUR UMBRELLA PATCH.

A large cut can be made absolutely air tight by removing the protection strip and crowding some soft material in the cut moistened with rubber solution. Wrap it with special tire tape around the cut and replace the strip.

Our Improved Valve Is Perfect.

To Riders: Our '93 P. S. tire is as light and lively as any other in the market, and can be repaired by the roadside by any one in a few minutes. Any other tire must be removed from the wheel to be permanently repaired.

This cut represents the well-known inner tube tire laced on the under side, which we have greatly improved.

NEW YORK BELTING & PACKING CO., Ltd.
15 PARK ROW, NEW YORK.

safeties and had orders for fifty more cancelled, being unable to obtain them.

Charles H. Sieg says branch stores are by no means a paying investment, and that his five were closed in time to clear expenses. Mr. Sieg declares he has done a business of \$134,000 this season, his sale of Imperials alone numbering 476. Mr. Clementi is not a member of the new company, but is about to embark for himself in this city with several lines of wheels which he controls in the west.

Recent Patents Granted.

The following is a list of recent bicycle patents, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

484,786, tires for cycles; Thomas Fano and Charles F. Lavender, Toronto, Can.; filed Nov. 18, 1891; serial No. 412,330.

484,857, bicycle; Arnold H. Kempe, Oakland, Cal.; filed Jan. 5, 1892; serial No. 417,063.

484,941, bicycle support; Joseph J. Muller, Lucerne, Switz.; filed Jan. 12, 1892; serial No. 417,839; patented in Germany June 7, 1891, and in England June 8, 1891.

484,945, combined cape and cap; Albert T. Aldrich, Worcester, Mass.; filed May 16, 1892; serial No. 433,105.

484,962, wheel for cycles; Rimmon C. Fay, Illion, N. Y., assignor to the Remington Arms Company, same place; filed March 28, 1892; serial No. 426,776.

485,047, exercising machine; Edward Leamy, Syracuse, N. Y.; filed March 28, 1892; patented in England Oct. 6, 1891.

485,094, bicycle; Harry E. Dey, Brooklyn, N. Y., and Frederick B. Griswold, Hartford, Conn.; filed March 5, 1892; serial No. 423,806.

485,110, tire for vehicle wheels; Louis McClymonds, Cleveland, O., assignor to the Peerless Manufacturing Company, same place; filed July 23, 1891; serial No. 400,340.

Trade mark, 21,891, lubricating oil for bicycles; Akam Cook's Sons, New York; City; filed Aug. 27, 1892; essential features, the representation of two winged wheels connected by a chain, and the word "Bicycline."

General Trade Notes.

The Pawtuxet Valley (R. I.) Wheelmen made \$133 out of their tournament.

Bush & Paul, Fort Wayne, Ind., have commenced to manufacture bicycles on a large scale.

C. E. Schaff, the G. & J. B. ston manager, was in New York last week attending to some tire business.

The Staten Island Wheelmen now have over sixty names on the membership list, though the organization is quite young.

The Sperry Cycle Company has two stores, one at Champaign, the other at Denver. The former will soon be closed.

Peterson Brothers of Detroit are, so it is reported, forming a new company, and will manufacture bicycles for the coming season.

On a Mariott No. 15 racer, M. Hazleton broke the twelve hour road record of France two weeks ago, covering the distance of 292 kilometres.

Herman Gute, formerly with Kingman & Company, has taken the management of the Detroit Cycle Company, lately organized in Detroit.

Tuesday night the Peekskill (N. Y.) wheelmen held a lantern parade. Riders from Yonkers, Mount Vernon, Tarrytown and Sing Sing took part.

Were all sulkies used entirely on the track only racing tires would be needed, but in the country districts horsemen drive from town to town with their sulkies. For this reason road tires are generally used. An inventive genius is

designing a shoe for pneumatic tires for such use.

The entire output for 1893 of the Buffalo Cycle Works has been disposed of to H. C. Martin & Company, to whom correspondence should be addressed.

The Chapman Hardware Company, of Toledo, has issued a handsome portfolio, containing colored pictures and a description of the World's Fair buildings.

The annual reception of the Riverside Wheelmen will be held at the Manhattan Athletic Club theater in January. The social features of the Riverside Club are too well known to forecast anything but an enjoyable time.

W. C. Werum of Los Angeles, Cal., arrived in Pendleton, Ore., last week, after traveling 1,300 miles awheel over the mountains and valleys. Mr. Werum will spend the winter in Pendleton, going in the spring on his wheel to Toledo, O.

The Nebraska Cycle Company of Lincoln, Neb., has commenced the manufacture of a high grade wheel to be called the Lincoln. Two hundred will be made and they will be marketed promptly in the extreme western states.

Thomas Saunders left Liverpool on the City of New York Oct. 26, and expects a kind providence favoring, to be at the

dent, M. Furst; second vice president, J. H. Mellor; secretary, P. Snyder; treasurer, John Benninger. A meeting of the executive committee will be held Nov. 7, and a general meeting of the organization Nov. 15.

The Boston Woven Hose and Rubber Company will push its Evertite tire, and is reaching out among the trade with a view of bidding for next year's tire business. This company is one of the solid New England institutions, and its other branches of the rubber business are extensive, each department being presided over by a practical man.

A physiological examination of four cyclists, after a run of 246 miles, has been made by two French scientists. This distance was covered by the youngest of the party, an Englishman of eighteen, in seventeen hours. It was found at the end of the run that his temperature was rather below than above the normal, and that one result of his excessive fatigue had been a decided waste of nitrogen. The nutriment taken during the course consisted of alcohol, champagne, beef tea and kola solution. The winner was much tired at the conclusion; the next man, a Frenchman of twenty-eight, not at all. His pulse was beating

of 204 3-8 miles this being another score for the Glasgow machine. On the same track a week later Voght broke the fifty-mile scottish record, his time being 2 hrs., 27 min., 2 3-5 sec., and his mount a New Howe.

Kingman & Company, Peoria, will handle the Centaur and Featherstone line next year. They report this year's trade as very satisfactory; the only difficulty was in not being able to secure King of Scorchers in large enough quantities. They are now having a special high grade wheel built to be called the Kingman. This will be pushed principally in the eastern states.

The relay saddle made by the Relay Manufacturing Company, of Reading, Pa., caught on last season, and deservedly so, as the article made was of exceptional merit. The Relay saddle for 1893 will have many admirers, as the workmanship is excellent. It is withal a simple, durable and good-selling saddle. Agents will do well to bear this in mind. See the cut of the Relay in our advertising columns.

Who Were the Cyclists?

The cyclists have a friend in the local detective department. This on account of the deed of two wheelmen whose work, however, came to naught through the stupidity of a park policeman. J. Kelly, sergeant at the central station, is the official in question. One day last week his daughter, while out driving, was run into by a man in another buggy. The cyclists, who saw the accident, gave chase, caught the reckless rider, and turned him over to a park policeman, from whom he finally got away through some mysterious way. The lady in question was severely and permanently injured, and her father desires the addresses of the cyclists that he may gain a description of the man. His address is J. Kelly, Central Station, city.

Is Bassett a Professional?

Abbott Bassett, once upon a time, was a racer, and in a race won a pair of lamps. Two old racing board members have made yearly requisition on the L. A. W. secretary to produce those lamps, but up to now he has failed to comply with the demand. One of the two gentlemen declares that those lamps no longer light the secretary on his way, and that they are no longer a part of his assets. The question is, if Bassett cannot produce his prizes—won in contest before the act to exchange came into effect—is he an amateur now? That's what several of his friends want to know.

Interest in Good Roads.

An Indianapolis dispatch says: "A great deal of interest is being taken by the local wheelmen in the coming road congress, to be held at the State house in this city, Dec. 6, 7 and 8. The Commercial Club has invited them to have a representative present, and they will send one in the person of Isaac Potter, who is the editor of *Good Roads*, a paper published in New York by the L. A. W. Mr. Potter, besides being a writer on the subject of highways and their improvement, is a practical road maker, and his experience will doubtless be of some aid in the coming assemblage."

W. P. Laing and Miss Kate Healy, both members of the St. Louis Cycling Club, were married last Wednesday at the residence of M. H. Hanley, an ex-member of the club. The wheelmen attended the wedding and the members of the cycling club presented the newly-married couple with a handsome silver tea service. The wedding was very informal.

MERELY A SAMPLE.

Green River Oct 27/92
B. L. White Secy. in
Chicago, Ill.
Dear Sir:-
I read your League
Circular & am well pleased with it
but don't understand what you mean
with reference dues, fees etc.

Please answer my following questions

1) Why do you want References
& the name of Club (concurrent)?

2) Why do you have Dues & fees.

3) Does the dues & fees cost \$2.00 -
Extra with out the \$2.00 for subscribers

4) Can I have half year subscription
to your paper or must I take whole
years subscription to your paper

Please turn Over,

Is the bicycling World &
L. A. W. Bulletin, all
of paper or in back for it self

By your stand the
Bicycling & L. A. W. Bulletin
is a paper published weekly.
& you send it & the monthly magazine
magazine Good Roads all for
for \$2.00 per month in clubbing
dues & fees on that time that right
I think or if it haunt then write
me at Once & let me know what
you mean is right. Yours
Very truly

Green River, Ills.

This is the kind of letters received by division secretaries, yet the addresses are not given to the public. The name and box number were omitted—it would be cruel to print them.

Imperial Hotel, New York, Wednesday (Nov. 2). Thus writes J. Friedenstien, secretary of the hustling Anglo-American Company, to our New York office.

The Standard Manufacturing Company, of Martinsburg, W. Va., will have several new ideas in its next year's Standard, and is looking out for good live agents. This wheel met with a cordial reception in the south last year, and the company will increase the production next season.

The new book just published by the American Sports Publishing Company—"Life and Battles of James J. Corbett"—is sure to have a big sale. The price has been made ten cents, so that every one can afford to buy a copy. James E. Sullivan, well known in athletic circles, is president of the new company.

Charles F. Stokes is now in Denver, en route to the Pacific coast. His branch store at Denver has paid splendidly this season and he is now moving it from a side street to 1758 Stout street, Denver's cycle row. Charles F. Stokes, Jr., went west with his father and has been installed as manager of the concern.

The Good Roads Association of Brooklyn has elected the following officers: President, I. B. Potter; first vice-presi-

at sixty, that of the former at eighty-four, though, as in the former case, this champion had lost much nitrogen.—*Exc.*

The bicycle business at Ft. Wayne, Ind., was all that could be expected this season. All the dealers report sales as being large and everybody seems well satisfied. Ft. Wayne has about twelve miles of concrete pavement and is putting more down. By next season the boys expect to have one of the finest cities for cycling in Indiana.

The Austrian championship for 100 kilometres (62 1-2 miles) on the road was decided in the environs of Vienna on the 9th inst., and was won by Wilhelm Friedrich on a Raleigh in 3 hrs. 36 min. This is also a record of Austria and only one-fifth of a second above that for Germany, which would have been badly beaten if Friedrich had not gone some distance over the wrong road.

Lacaille, mounted on a New Howe racer on Tuesday, Oct. 11, went for the twelve-hours' record on Hampden Park track in Scotland. Starting at 7:30 in the morning he commenced to break records at thirty-five miles, and at half time had covered 104 miles 220 yards, and at the finish of the ride had established a twelve hours' Scottish record

THIRD ANNUAL CYCLE SHOW!

Exhibition of Cycles and Cycling Accessories,
And Newest Applications of Pneumatic Tires.

Under the auspices of the ASSOCIATED CYCLING CLUBS of Philadelphia.

TO BE HELD IN THE
FIFTH -- STREET -- MARKET,

Proposed Site of the New Bourse,
FIFTH STREET, ABOVE CHESTNUT.

Commencing Jan. 4, 1893.

Continuing for Ten Days.

The committee takes pleasure in announcing that it has secured a building that will give ample space and facilities for the show, having 37,000 feet of floor surface—three times as large as Industrial Hall, where the last show was held. For prospectus, plans and full particulars, address

THOMAS HARE, Chairman of Committee, 104 S. 5th St., Philadelphia, Pa.

Holland Automatic Safety Stand.

(PATENT APPLIED FOR.)

Easily and Speedily Attached to any Central Tube, Diamond or Drop Frame Safety. NEVER IN THE WAY OF THE RIDER. Will hold machine upright on any level place. Machine cannot fall either way. Both arms work in unison, up or down, when operated from either side of machine. It cannot rattle. Adds to the appearance of the machine and weighs but a trifle. Full Nickel-plated with Rubber Tips—cannot mar the finish. PRICE, \$3.00.

LINCOLN HOLLAND, Inventor and Manufr., S. Framingham, Mass

THERE ARE OILERS AND OILERS

But only one "PERFECT." Be sure to get the best. There are other good oil cans, but the "PERFECT" Pocket Oiler is still unexcelled. Ahead of all others in neatness, durability and popular favor.

CUSHMAN & DENISON,
172 9th Ave., N. Y.

**"PERFECT"
POCKET OIL HOLDER**
Best and most convenient device for carrying an oil can on a bicycle. Thoroughly adjustable and easily attached to any part of the machine; no rattling; handsomely nickel-plated. Price, 25c. each.

CUSHMAN & DENISON
172 9th Ave., - New York.

**"PERFECT"
Pneumatic Pump Holder**
Similar to oiler holder, but slightly larger. Pump is always convenient and vexatious delays avoided; handsomely nickel-plated. For sale everywhere. Price, 25c. each.

CUSHMAN & DENISON
172 9th Ave., - New York.

RECENT ENGLISH INVENTIONS.

New and Useful Designs in Frames, Tires and Wheels.

These abstracts are prepared immediately after the complete specifications are published by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Sept. 14, give notice in the prescribed form of such opposition.]

No. 13,474. R. S. Lovelace's "Improvements in and relating to velocipedes." Oct. 27, 1891.—This invention relates first to a chain guide and secondly to a chain adjustment. In carrying out the first part of the invention there is mounted on the prong of the back fork on that side of the machine on which the chain runs, a bracket carrying a depending fork, the prongs of which are adapted to fit over the lower run of the chain and so guide it in its travel. The prongs either have rollers mounted on them or are covered with some suitable soft material. A similar fork may be used to guide the top part of the chain, but this is not so necessary, as the driving strain keeps the top run of the chain taut. The second part of the invention is carried out as follows: The pedal crank axle is mounted in the usual way in a bearing bracket (C), which has two tubular arms (D D) formed or fixed on it. These arms are adapted to fit and slide in extensions of the prongs

(E E) of the lower back-fork. On the ends of these extensions are mounted clip sockets (F F), capable of gripping the arms carrying the bracket (C) after adjustment. To adjust the chain-screw bolt passing through a lug on the bracket is threaded into a cross bar fixed to the extension of the prongs of the lower back fork or their equivalents. As a modification, the bolt (G) may be made in two parts, coupled together by a right and left hand nut (H) as illustrated. Another modification consists in using only one arm, in which case it is placed centrally and is preferably of oval section, and it is adapted to engage with a similar tube carried by the lower back fork. With this construction of frame it is obvious that the members of the upper back fork must be pivotally attached to the other members of the frame or to the axle of the driving wheel, to allow of the variation in the length of the lower back fork.

No. 19,116. C. S. Stone's "Improvements in rubber tires for velocipede and other wheels." Nov. 5, 1891.—This invention consists in providing the under side of the tire with a number of lat-

teral grooves (B) extending throughout its length at a slight distance apart. Instead of grooves, lateral holes (C) may be employed or both may be used together. When both are used the holes

are placed between the grooves a little distance above them, at the thick part of the tire. If holes only be employed, they are preferably placed in two rows, one slightly above the other, each row alternating with the other.

No. 19,838. J. B. Dunlop's "Improvements in and relating to wheels for velocipedes and other vehicles." Nov. 16, 1891.—This invention is intended to lessen vibration and facilitate propulsion and is applied to wheels. The rigid rim (A) is preferably made somewhat broader than usual, and a continuous band (B) of pliable material secures an inner flexible hoop (C) to the rim (A). The said band (B) is passed over on the inner surface of the rim (A) and the inner surface of the hoop (C), and crossed between them after the form of the figure 8 or the letter x. As a modification, a number of continuous or endless bands may be used; the sides of the said bands are joined between the rim and the hoop where convenient, or they may be bound or laced in vari-

ous other ways. The bands (B) are coated with india-rubber and vulcanized and also with cement, so that they may be protected from wear and moisture, and caused to adhere to the rim and hoop. An outer flexible hoop (E) is secured to

the inner hoop (C) by means of a layer or pieces (D) of elastic material cemented in position between the said covered rings (F hoops), preventing friction between the said hoops. If desired, the said hoops may be more firmly secured to each other with strips of cloth or the like, covered with cement. The hoops may be made of waved or corrugated bars, or in place of two or more hoops a single hoop may be formed of two or more layers made from a continuous strip, after the manner of a child's wooden hoop, the several turns or layers being secured to each other in a similar way to that above described for the two separate hoops. The bands (B) are drawn sufficiently tight to maintain the inner hoop (C) in position, but not so tight as to prevent the compound rim (E C) from yielding when weight is borne upon the wheel. An elastic tire (F) is secured on the outer hoop (E). The resiliency of the wheel is mainly dependent upon the flexible hoops which act together, and the object of using two or more instead of one is to increase the resiliency of the wheel.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Sept. 21, 1892, give notice in the prescribed form of such opposition.]

No. 16,959. P. L. Renouf's "Improvements in tires for velocipeds and other carriages." Oct. 1, 1891.—The object of this invention is to construct pneumatic tires in such a manner as to render them easily attachable without the use of solution, lacing, or similar devices (though such devices may sometimes be added for additional security); to render them easily detachable; to avoid the too sudden lateral deflection of the air chamber where it is no longer supported laterally by the rim, and cause the section of the air hole

to change gradually from a true circle to an oval when under varying pressure from the road. The air chamber, when in a normal state and not subjected to external pressure, is quite round in section, and the canvass or other fibrous restraining material is so constructed and proportioned that the inflation of the tire when in position makes the tire a perfect fit on the rim. In the case of double tube tires the outer covering is sometimes wrapped around the inner tube (A), the edges overlapping on the inner circumference to such an extent that they are kept firmly in position on the rim (D) by the pressure of the inner tube (A) toward the rim. These edges are preferably formed out of canvas or are strengthened by canvas and so shaped that they interlock. In other cases, whether the tire be of the single or the double tube type, adhesion to the rim is secured by the variation of the rim and that part of the tire which is in contact with it from a purely cylindrical section, the arc of the surfaces being broken by grooves, corrugations, indentations or perforations. For instance, the surface of the rim may be corrugated longitudinally and the corresponding parts of the cover shaped to fit these corrugations, or as a modification the same tire may be fitted to an ordinary concave rim into which is secured a strip of leather, rubber or other material furnished with the longitudinal corrugations. Again, the rim may be provided with a series of pairs of depressions or holes, and the outer cover furnished with a corresponding number of pairs of studs or projections fitting into the said holes or indentations. In conjunction with such a rim, studs (R S) of metal or other hard substance may be fixed firmly into the tire directly onto a layer of canvas solutioned to the tire. The studs are furnished with small heads and the holes in the rim just admit the insertion of these heads. When the tire is inflated the studs will tend to get slightly further apart, the heads of the studs will then lodge under the rim, and it will be impossible to detach the tire without deflating it. On all other tires, where a separate air chamber is required, it may be of pure rubber, surrounded by a canvas bag (B), or may be of the "insertion" variety, in which the rubber and canvas are vulcanized together.

No. 20,968. R. S. Lovelace's "Improvements in and relating to velocipedes." Dec. 1, 1891.—The provisional specification of this invention refers to a detachable crank and a pneumatic tire, but the latter only is referred to in the complete specification. The objects of the improvement are to facilitate the removal of the outer cover to get at the air tube, and the firm interlocking of the cover with the rim when in place. The cover (A) is made of rubber or other suitable material, and it is moulded to assume somewhat of an arch or equivalent shape in cross section, that part adapted to form the tread being thicker than the other parts. The edges (Z Z) of the cover are thickened or enlarged, and they are so shaped that when the cover is placed in the rim (B) of

the wheel there is a Y-shaped space between the said edges. In this space a ring (C) of rubber or other suitable material of a dovetailed or wedge shape in cross section is placed into the space between the edges of the cover, and so binds the said cover to the rim. The locking ring (C) may,

if desired, be made in one piece with the air tube (D), or it may be attached thereto, in which case it is preferably made on or fixed to a strip of canvas, the said strip being then solutioned or otherwise fixed to the air tube. When the locking ring is made of vulcanized or other hard material, it is preferably made in short lengths, in which case they are threaded on a cord or its equivalent. This cord may either be an elastic one or an non-elastic one, in which latter case it is provided with any suitable means for connecting its ends, when it is drawn up taut, when the ring is in position in the rim.

The rim (B) of the wheel is made of any suitable section, and it has in some convenient position short vertical sides or flanges (Y Y) of any suitable shape to engage with the enlarged or thickened edges (Z Z) of the cover (A). These vertical sides or flanges (Y Y) may either be located at or near the center of the rim, as shown at the edges thereof, in which case they are preferably made in the form of tubular beads. These sides or flanges (Y Y) may also be slightly inclined towards one another, as shown, to enable the edges (Z Z) of the cover (A) to get a better grip thereon. Either the outer cover (A) or the air tube (D) is reinforced with canvas or its equivalent in the well known manner.

No. 17,821. J. W. Kennelly's "Improvements in the construction and arrangement of cycle framings." Oct. 17, 1891.—The objects of this invention are: Obtaining strength with lightness, imparting steadiness and rigidity to the pedal axle bracket, distributing more evenly the weight

of the rider and reducing cross strain. The idea of the invention will be readily seen from the illustrations. It consists primarily in crossing the upper and lower backbones of a diamond frame. Either the lower backbone (E) is made of a single tube and passes between the two horizontal members (B) of the upper backbone, as illustrated,

or the arrangement may be reversed, the upper backbone being single and the lower double. In applying the invention to a ladies' safety bicycle, a projection (C) is produced downward in the line of the diagonal tube (D). The tube (E) starts from this and runs to the top of the head (A), passing between the tubes (B) on its way. This construction also may be reversed (B), being a single tube passing between two tubes constituting the member (E).

They Idolize Sanger.

MILWAUKEE, Oct. 31.—As a lover of justice and fair play, and without any desire to enter into a controversy over the matter, the writer would like to tell the public how W. C. Sanger is regarded among his clubmates and friends who have associated with him since childhood. Few, if any, of the newer class of riders have received from the hands of the cycling press the elegant roasts

that have been served up to Sanger on all occasions. He has been severely criticised on every hand, accused of being a kicker of the chronic kind, an ingrate, devoid of all feeling of appreciation, and also of a cross and surly disposition. Looking over the situation with the calm eye of a critic, unfamiliar with the true state of affairs, it may seem possible and the verdict just; but there is another side of the picture and extenuating circumstances, which give the subject an entirely different aspect.

There is an old saying, "Save me from the folly of my over-zealous friends," which aptly applies to Sanger. That he has been unfortunate at various meets, no one will deny; and that on several occasions, at least, there was just cause for complaint, all will agree. But Sanger has not made the alleged protests—they have in almost every instance come from his friends, whose enthusiasm for him led them to think they were doing the proper thing, when in reality it only increased an unpopular feeling towards him. His experience has no doubt taught him that a racing man cannot expect to ride at a race meet without taking the chance of an accident. Every racer of prominence has his scars. Sanger, although young and comparatively new on the track, has a right conception of how things should be, and if I am not mistaken uses his best endeavors to that end. If his friends will only exercise a little judgment and not be so profuse with their bombastic talk, it will not take the racing fraternity and everyone with whom he comes in contact very long to find out his true worth. Sanger at home is noted for his unassuming ways, and is of a modest, retiring disposition, and, withal, a gentleman.

The entertainment committee of the Milwaukee Wheelmen has found a very unique way of advertising the minstrel show. It is a photo, 14x17, the background of which is made of local papers and bicycle journals. Seventeen heads protrude through holes punched in the paper, all of which are splendid pictures. The cut is so distinct that you can read all the names of the papers and some of the printed matter, which makes it all the more interesting.

Frank Morawitz, secretary and treasurer of the Wisconsin division, travels for Welham & Company, wholesale grocers. He reached home Saturday morning to find that the entire plant had been consumed by fire the night before.

George Kendall, a popular member of the Milwaukee Wheelmen, has returned from an extended visit in the east.

It is rumored that next season a western circuit will be formed which will include Indianapolis, Springfield, Cleveland, Columbus, O., and New Albany, Ind. What is the matter with Milwaukee getting in the circuit? She can hold her own against any of the above cities, and is a live, progressive cycling centre.

JACK ROYAL.

This is "Rot," Pure and Simple.

Walter Sanger's friends say he was foiled in the two-mile, 2:20 class race, Milwaukee riders who witnessed the events there say that both Sanger and Johnson could easily have defeated all the Chicago riders entered in the races had they been given a fair show. It is said that so manifestly unfairly were they treated that it is a wonder that either of them succeeded in capturing a place in an event.

In regard to Johnson, the Milwaukeeans say he was not given a chance to show his speed, but was boxed up by Chicago riders in each race and so blocked it was impossible for him to forge to the front.—Milwaukee News.

NEW YORK.

Tire Factory, 49-51 West 66th Street, New York.

A Home For Visiting Wheelmen.

The National Columbian United Wheelmen's Association has received from the architects the plans for the building to be located on Madison avenue near Fifty-

seventh street. The plans are very complete, and the new building, a cut of the front of which is shown, will be all that the promoters of the enterprise have claimed.

Asphalt From Chicago to New York.

That gigantic scheme to build an asphalt road for cyclists from Chicago to New York has been revived. According to Peter Gendron of the Gendron Iron Wheel Company, who was recently interviewed on the subject by a Toledo reporter, the first idea was to build a pathway five feet wide of asphalt. This was the New York Recorder's scheme, but when Mr. Gendron was in New York, he had a talk with the promoters, and all thought a road thirty or thirty-five feet wide would be better. It is figured that all cycle makers and wheelmen, merchants in towns through which the road would pass, and even Congress would contribute to build the road. The government could use it as a mail route and for the transportation of troops by foot or a wheel. There would be no tolls and a commission or board would manage it from one end to the other. The scheme is gigantic, will cost a fortune, and it is improbable that it will ever amount to more than talk. Still, it would be a great thing and without doubt everyone interested in cycling would contribute generously to a fund to be used in putting it through.

New English Records.

During the past fortnight or so Schofield and Osmond, English cracks, have been almost living on the Putney track, with a view to record-breaking. The weather has been all against them, but on Thursday Schofield at last got a favorable opportunity, and the result was that he rode a quarter-mile in 31 1-5 sec, two-fifths seconds faster than Zimmerman's Herne Hill record, and brought the half-mile record from 1:05 down to 1:02.

Elliott Mason's Positive Proof.

Elliott Mason and Arthur E. Pattison are having a lively correspondence over the correct distance between handlebar and saddlepost on women's bicycles. Mr. Mason claims that what suits a Connecticut woman will not answer for a New York or New Jersey woman, and follows up his argument by showing a chart giving the dimensions of space required by the women of those states. Mason has always been considered as a "ladies man," in the vicinity of New York, but what puzzles the genial Pope Manufacturing Company's secretary is

how did Elliott Mason procure his information about the dimensions required by the Nutmeg State women. It is a delicate subject, so Mr. Mason has been invited to take his charts and other proofs to Hartford. Here a secret meeting "for men only" will be held. It will be presided over by Col. George H. Day and attended by all the bring men of the Pope Manufacturing Company. The outcome will be awaited with anxiety by Elliott Mason's friends, as his reputation is at stake.

The "Referee" Was Right.

The Wheel and the REFEREE, like all the special bicycle papers, are fond of roasting the cycling work of the daily papers, but as the above-mentioned sheet publishes entirely different of the Independence kite track, one of them must certainly be wrong.—Evansville Standard.

The REFEREE's picture of the track was a half-tone cut—an exact reproduction. It came from Mr. Williams, the owner of the track. Draw your own conclusions as to which "special bicycle paper" was right.

Duryea Will Fly.

Fred Patee, of Peoria, in conversation in New York recently, predicted that the first man in America who would

THE LADY CENTURION.

THE START.

THE FINISH.

make a success of a flying machine would be Peter Duryea. Patee was in earnest, too. He considers the Sylph inventor a mechanical wizard, second only to Edison "His machine," continued Patee, "is all right, and just as soon as the necessary funds to complete the machine (about \$5,000) are had, you will hear from Duryea in the clouds. You talk about high flyers"—and here Fred stopped.

It Would, for a Fact.

It would be a matter of great satisfaction to bicycle riders if that elliptical sprocket wheel question be settled one way or the other before the beginning of next season.—Detroit News.

Notes.

The Can on C. C., of Long Island City, N. Y., gives its first reception Dec. 6.

A. H. Perrigo and H. K. Smith are candidates for the chief consulship of Nebr.-ska.

So enthusiastic a wheelman is Charles Roth, of Cincinnati, that he lives on Wheeler street.

Omaha is to have a century club, while Council Bluffs is to have a World's Fair wheel club.

The Roseville Cyclers of Newark, N. J., a new club of sixty members, have accepted the offer made by the Roseville

Athletic Association of Newark to join, and will now become members of that organization.

Owing to bad weather the much talked of parade of the wheelmen of Leavenworth, Kas., was postponed indefinitely.

At Kearney, Neb., an amateur athletic association has been formed and a quarter-mile track will be made at once. The track will be converted into a skating rink this winter.

In *Outing* for November Frank G. Lenz continues his description of his tour "Around the World with Wheel and Camera." The article is illustrated from instantaneous photos taken by Mr. Lenz, who is an expert photographer.

Chicago is to have a 16,000,000 candle power search light. It will be taxed by the effort to find a specimen of the pure amateur which some people still persist in believing exists somewhere in this wide, wide world.—Cleveland World.

The wheelmen of Minneapolis are to have an elegant club house, work upon which will begin in the spring. A thousand shares of building stock at \$10 per share have been subscribed. The Flour City club, the originator of the movement for a club house, has formed of itself the Flour City Track Association. It is intended to spend \$5,000 for a bicy-

cle track next year, and make Minneapolis the headquarters in the northwest for wheelmen. The club has hope to induce some public-spirited citizen to give it a building site.

The Ramblers B. C. of Denver has issued an attractive pamphlet called an "Invitation to Membership," which sets forth the details of the proposed club building. Cuts of the proposed building are shown and descriptions are given of the wheel room, bowling alley, natatorium, reception rooms, gymnasium, running tracks and billiard rooms.

On Tuesday of last week Henry H. Hollister, of Manchester, Conn., was instantly killed by the cars. He was riding a bicycle along the platform at the depot when he came into collision with a boy. Both fell beside the track. Mr. Hollister, seeing the train coming at full speed, heroically pushed the boy from the track. His own arm was caught and he was dragged under the wheels.

STOLEN.

FLYER RACER, 23 LBS., FRAME COPPER-plated, rear forks had a peculiar curve at the top of frame, different from any wheel on the market. Had T shaped saddle post, and racing saddle. Racing tire on front wheel, and road tire on rear wheel. Was taken from the Illinois Cycle Works factory, 665 Carroll Ave., between 5 and 6 p. m. Friday, Oct. 28. A suitable reward given for information that will lead to the arrest of the thief. ILLINOIS CYCLE WORKS.

CHRISTMAS ISSUE,

1892.

TO CLUB SECRETARIES AND OTHERS:

We are preparing a club directory. You are invited to send the following details:

Name of club, address of club rooms, if any, date of organization, number of members, name of president, name and address of secretary. Early replies are solicited.

Makers, jobbers and importers of wheels, tires, tubing, forgings, chains, spokes, cycle-making machinery, or of anything in anyway connected with the cycle trade, are requested to at once forward details for our trade directory.

COPIES TO SUBSCRIBERS, FREE.

TO OTHERS, 25 CENTS PER COPY.

Order direct or through your newsdealer.

Caxton Building, Chicago.

THE JAMES

Here is the Record at the close of the Season of 1892:

Ninety-Five Per Cent of all the JAMES WHEELS sold this season weighed in each case less than 28 lbs., *Actual Guaranteed Weights*, and upon these feather-weight wheels depended the reputation of *The James* in this country. And what is the result? You cannot find a cyclist in this broad land who has ridden or observed *The James* that is not an admirer and advocate of its remarkable qualities.

SPECIFICATIONS.

JAMES CYCLE COMPANY,

113 Adams Street,
CHICAGO, ILL.

A BIG OFFER!

There are machines in the market, the makers of which claim to have revolutionized everything in connection with cycling—except amateurism!! That's their peculiarity!!

We have never yet subsidised Amateur Riders—being a contravention of the rules and regulations of the National Cyclists' Union, and a breach of Amateur Law—we do not intend to depart from this principle, but will present

A Prize Value \$500

to the first Amateur rider who succeeds in lowering the One Mile Amateur Record on one of our "CHAMPION" RACERS. We will also give to the first Professional who succeeds in lowering the World's Record at One Mile on our Machines

\$500 Hard Cash.

COLD :- ROLLED :- STEEL :- RIMS :- AND :- MUDGUARDS.

We are making Rims "az is" Rims, because we have the facilities—much enlarged—for '93, and we know how to do it—any gauge steel required, accuracy as to size and for any make of tire. We are not novices, and you are not experimenting when you use our goods. We give you the benefit of *OUR* experience—cheaper than getting it yourselves—eh?

We carry also a complete line of hollow rims of various sections and sizes, and are successfully making Aluminum Rims for racing wheels, with an improved joint, almost as stiff and rigid as steel, but only one-third as heavy in weight, and we successfully braze them, which, if you know anything about it, is a science in itself.

Everything in the line of Cycle material, either rough or finished, of the very best quality, can be obtained from us. '93 patterns coming in.

24 Cash Prizes.

We desire to thoroughly introduce our Sunol Bicycles throughout the United States in 1893, and in order to give them such an introduction, we realize that we must advertise liberally and well. We are willing to advertise liberally, but that it may be done well, we must have a supply of bright original advertisements. We therefore make the following offer for the best 24 advertising ideas, first prize to be awarded to the author of the best, second prize to the author of the second best, etc.; decision to be made by three competent judges:

1st Prize, \$200. 2nd Prize, \$100. 3rd Prize, \$50.

4th Prize, \$25. 5th to 24th Prize, \$10.

We will also pay \$5.00 for each idea not securing a prize that we think we can make use of. Contest closes January 15th, 1893. For particulars as to the nature of advertisements required, etc., address—

THE METAL TURNING CO.'S MAGIC BICYCLE OILER.

Patent applied for.

We are now ready to supply these goods to the general trade, and claim for them the following points of superiority over any others on the market.

First: They do not leak, and are as clean to carry in the pocket or tool bag as a knife or wrench.

Second: You can get as much or as little oil from them as you need. When a drop only is required, place the feed wire where the drop is needed and press down. If a larger quantity is required press the bottom of the oiler, and the oil will flow freely from the wire. You do not need to waste oil and daub your machine with this oiler. And you can oil your wheel quicker than with any other.

Full size cut.
Patent applied for.

THE IDEAL PNEUMATIC TIRE BREAKS THE RECORD.

A Double Puncture Permanently Repaired in Less Than Fifteen Minutes by the Roadside.

Messrs. PHELPS & DINGLE:

Gentlemen:—I have used your Ideal Pneumatic Tires now for over two months and like them very much. While out riding with some friends about a month ago one of the tires received a bad puncture. We took the inflated tube out and put on two patches. In fifteen minutes from the time of the accident the repairs were all completed. I have used it ever since without any further repairs and it appears to be perfectly air-tight and in every way as good as ever.

PASSAIC, N. J., July 28, 1892.

ANTI-STIFF

TO STRENGTHEN THE MUSCLES.

TO STRENGTHEN THE MUSCLES.

It is a marvelous preparation for Strengthening the Muscular System. With Anti-Stiff there is no faith required; it goes straight for the muscles, and you can feel it at work. It has a peculiarly warming, comforting and stimulating effect on all weak or stiff muscles or sinews. Quick in its action, cleanly and pleasant in use.

Rub it into the muscles every night for a fortnight and you will be pleased at its supporting and strengthening properties. There is not, nor has been, anything like it till now. It differs from all Oils, Embrocations and Liniments, both in substance and effect. Some Athletes are so fond of it that they rub it all over them.

Price, 20c. and 35c. per box.

Trainer's Size, \$1.00.

E. FOUGERA & CO, Agents for United States, 30 N. William Street, N. Y.

WHITWORTH CYCLES

. . . . U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

MAKERS OF ALL KINDS OF TIRE WORK

THE MOST NEWSY CYCLING JOURNAL IN EUROPE.

For really pleasing cycle reading, bright, chatty, and light, commend me to the Irish Cyclist. Although it necessarily devotes much of its space to Hibernian affairs, it always contains matter of general interest, while its little stories and anecdotes are well seasoned with Attic salt. Mr. McCreedy would certainly satisfy Carlyle's requirement in "able editing," the whole paper is stamped with his pleasant imprint.—The People, London.

The ablest edited and most newsy cycle journal in Europe.—Sporting Times, New York.

One of the smartest and liveliest of cycling papers.—National Press.

Mr. McCreedy's admirable cycling journal has pushed its way by sheer merit and enterprise into the very front rank of sporting papers.—Freeman's Journal.

The best paper in its peculiar line published.—Irish Society.

Its literary fare is still as bright and interesting as ever.—Cycling.

Although some of our English cycle journals are reckoned pretty smart, they cannot beat it.—Hull Daily News.

Matter which from beginning to end is thoroughly interesting, not only to Irish riders but also to English wheelmen.—Liverpool Athletic and Dramatic News.

The most interesting of wheel papers.—Cricket and Football Field.

A credit to the country.—Belfast Morning News.

An admirable miscellany of everything interesting to cyclists.—Weekly Irish Times.

Specimen Copy, post free, from **MECREDY & KYLE, 49 Middle Abbey St., Dublin.**

THE PERFECT CRANK.

The usual method of fixing cranks with a "key" or "cotter" is far behind the times, as, whenever the necessity arises for their removal, it is always the cause of expense to the rider, time and temper to the repairer, and brings discredit upon the wheel maker. These **PERFECT** Cranks may be removed

in a "jiffey" when required, and are being sold in thousands of pairs to English makers. Licenses granted to large wheel makers. Correspondence is invited from Jobbers.

"Wheels and Wheeling" AN INDISPENSABLE HANDBOOK FOR CYCLISTS.

By LUTHER H. POTTER, author of "Cycling for Health and Pleasure."
400 Pages. 216 Illustrations.
This book is a companion volume to "Cycling for Health and Pleasure," which met with great success, but contains nearly twice as much matter. It is crowded with interesting and curious information. Beside treating of Cycling in the United States, the L. A. W., Macadam Roads, and many other topics, it deals exhaustively with Pneumatic and Cushion Tires, giving illustrations of over sixty varieties, and describing in detail their construction and care.

This Information is Collected Nowhere Else.

Cycles with Attachments.

1789-1892.

THE material for a digest of all the U. S. Patents for Cycles with attachments from 1789-1892, in two vols., seventy-two sub-divisions of about 1,500 pages, is nearing completion, and will be ready for delivery not later than Sept. 15, 1892.

EACH and every sheet and figure of the drawings of the patents will be given together with the claims, all chronologically arranged, whereby an examination of the art can be made with ease and certainty. From what we know of the compiler and the digest issued by him, we feel confident he will sustain his good reputation, and produce a digest to be desired by all interested in the invention, manufacture and use of Cycles. Those desiring a Prospectus of the work, or wishing to subscribe, should address the compiler.

In order to perpetuate the above digest a Cycle Monthly or Abridgment is being published, beginning with January 1892. Subscription price for the Monthly, \$5.00 per annum; \$6.00 for the European edition, payable in advance.

A GOOD RECOMMEND.

(The Halladay-Temple Scorchers.)

GLEN HAVEN, Wis., Oct. 27, 1892.

RALPH TEMPLE, Esq.,
 Chicago, Ills.

DEAR SIR:—Arrived here yesterday (Wednesday) afternoon, having covered over 200 miles—part of which was over some of the roughest roads in the state of Iowa. Actual time on wheel was twenty-seven hours, against a continuous head-wind. During the entire trip did not have to stop one minute for any repairs, and I am pleased to say that the tires gave me no trouble whatever, except to inflate and deflate according to the condition of the roads.

Yours truly,
 GEORGE W. PRUGH, of Burlington, Iowa.

First Come, First Served.

Road King.

Those who took heed of the above last year at this time had no trouble in supplying promptly whatever their customers demanded. The year 1892 was a good one for the sale of wheels—1893 bids fair to be even better, for cycling has had an immense boom during the season just passed.

The demand for wheels ought to be enormous during the early portion of 1893, and as usual all will want them immediately. Every dealer ought to make it a rule "first come, first served." That is our plan, and it is only fair to all. A manufacturer is compelled to know somewhere near the number of wheels he intends to make; a dealer ought to know at this season somewhere near the number he will sell. He can come within a short distance of it at any rate.

There will be a rush of orders for the 1893 **Road Kings** and **Road Queens**, for the public and the dealers know well the good qualities of the 1892 wheels, and next year's production will be even better. Not better as to quality, or finish, or workmanship, for that we could not give. But as the wheels will weigh under 35 pounds they will be better, for the public has demanded a wheel of about that weight. The **Road King** will be the scorcher's delight.

MISLEADING REPORTS.

The *Tribune* and *Liter Ocean* have a happy faculty for manufacturing cycling news. It is well written, quite to the point, and is largely read; but naturally enough it is misleading. These papers announced a Sanger-Zimmerman match for \$1,000 and a side bet of \$10,000, when, as everybody now knows, no match was made and the \$10,000 part of the affair was entirely a case of imagination. Similar was the report of the doings of the racing board at its meeting in Chicago. The supposed changes in the rules defining an amateur were elaborated and commented on, in a way that would lead anyone to believe the same had been given out for publication. But the changes suggested at this meeting were never given out—and again a case of imagination. Rhodes was spoken of as "new to the path." Perhaps it never occurred to the writer of that paragraph that Rhodes, along in 1885-'86, was one of the most prominent of the amateurs—later a promateur, and of course then a professional under league rules. It is gratifying to see these papers devote so much space to cycling, but if their news and opinions bordered a little more on facts, wheelmen would appreciate them more.

PUBLISH THE RECORDS.

The racing board is the keeper of all the league's books which pertain to records made by amateur wheelmen on road or path, and so well does that body guard the precious documents that not one of the common herd ever enjoys a peep at the—curiosity, it has come to be. The general public has been kept pretty well informed on the changes that have occurred from time to time in the times made on the wheel, but through no fault of the league, its racing board, or the *Ancient and Honorable*. It has been through the efforts of the cycling press and the dailies. The records given to the public are unquestionably correct, but it might happen that the public might desire to know of some small record made of which the ordinary paper had never received information, while the racing board would be informed of it when application for record was made. The *Bulletin* is printed especially for the purpose of officially informing league members of what is going on in the big organization, and they probably desire to keep posted on the matter of records, also. The REFEREE believes the racing board should, say once a month, or even each week, pub-

lish all the records applied for, and as soon as passed upon the fact should be made known. At least once each year a complete and revised list to date should be printed. It would require but little work if these records are properly kept, and would naturally be of great benefit to the wheelmen at large. We would suggest that, inasmuch as the past season was especially remarkable for record-breaking, and that 1893 will be equally as great, and inasmuch as we are to have international championships during the World's Fair, it would be an excellent thing if the racing board would cause to be published during the first week in the new year a complete and up-to-date record of times made on all styles of machines and for all distances, both in trial and competition. This information would be valuable during 1893, for be it remembered our visitors may not be particularly well posted on the doings of our fast men.

THEY SHUN MILWAUKEE.

A majority of the Chicago racing men have practically decided to absent themselves from the indoor tournament of the Milwaukee Wheelmen, Nov. 24, 25 and 26, and for good reasons, we believe. When all the abuse that has been thrown at the Chicago men, *in re* the fouling of Sanger by Davis, the decision is not to be wondered at. We have granted that Sanger is an excellent rider—not infallible; however—but we do not think the Chicago men had reason to fear him in the least; we do not think that Davis is a man who would purposely foul a competitor, and we do not believe that anyone told a delegate from Milwaukee that the "Chicago 'push' intended to do Sanger up." It was sufficient for Sanger to enter his protest and have Davis disqualified; but there the matter should cease to be a topic for discussion. Sanger should have muzzled "Milwaukee's 'push.'" A Milwaukee paper says that one fails remarked that "after the races one of the judges hearing Sanger say that he had been warned, and told to look out for foul play, offered to bet \$50 that he could not produce the man who gave the warning. Walter accepted the bet, when the judge backed down." This is untrue; it was the Milwaukee people who backed down when Bode offered the bet. Sanger was not hurt, he was only scratched, and it appears very childish for a man of his size to go about crying over those few scratches. He should look upon Munger as a shining example of pure grit.

The racing board of the Milwaukee Wheelmen, at its meeting last evening, decided to drop the twenty-five mile race for the world's record and have instead a five-mile race between racing teams of Chicago and Milwaukee. By this it is hoped to arouse the Chicago men and insure the presence of almost all the fast racing men of that city. Chicago claims to have in Lumsden, Rhodes or Barrett a team that cannot be beaten. As the local team will include the cream of Milwaukee talent, with Walter Sanger at the head, the race would be a good one.

The above is from a Milwaukee paper. The racing board might "hope, hope on forever," as Dixie says, but the Chicago men will not arouse. The Chicago team has nothing to fear from Milwaukee; it has, so far this year, been unconquerable; in fact, the club has lost but one team race in its whole history, and it has competed with stronger teams than Milwaukee can at present produce. Chicago sympathizes with the Cream City in its recent disaster, but her racing men will give Milwaukee a wide berth.

PERFECTION IN TIRES.

A year ago many makers were striving to build a non-puncturable tire, but beyond those called self-closures, their efforts seem to have been in vain. Their object was, of course, to maintain the

same amount of resiliency. We fail to recall a single instance where this was accomplished, and the makers of to-day have, evidently, given up hope of producing a non-puncturable tire which will have as much resiliency as those that are certain to give way to the insertion of a tack or other sharp pointed object. In other words it appears that perfection has not been reached in the manufacture of pneumatic tires in this one respect. Another year may produce something, but we do not look for anything of a startling nature during the balance of this year or in 1893. The tire makers seem to realize that the best way out of the difficulty is to put out a tire that is easily repaired—one in which the inner tube may be reached in a moment. For next season there are several such, and no doubt their qualifications will soon have been well tried. At any rate, all the tires of 1893 will be of such a construction that the work of making a repair will be reduced to the minimum and a rider will have the assurance that he can go on a journey and not be at the mercy of tacks or horseshoe nails.

It has been the rule to keep politics out of the league, but the Hartford wheelmen seem to have changed the idea, for they set to work and made Col. Burdette a candidate for the legislature, expecting to elect him and see him in the speaker's chair, in which position he could be of great benefit to the good roads cause and the interests of wheelmen generally. Occasionally politics and cycling work well together and if other localities should show an equal amount of energy "the cause" would be greatly benefited. The west has had ample opportunities for similar action; its great number of wheelmen could easily carry through anything they might undertake.

It was a noticeable fact that, during the campaign that has just ended, the influence of the wheelmen was largely sought by political managers and candidates. Cyclists' parades were held in hundreds of places during the last two months, and clubs have been addressed by speakers from all parties. Some very energetic work was done by Messrs. Mac Millan and Durborow, candidates for congress in the third district, in order to secure the vote of the wheelmen of the district. Mr. Durborow rather got the best of his republican friend. It only goes to show that nowadays wheelmen are considered "s me punkins."

E. C. CARTER, the A. A. U. handicapper, was misquoted by our eastern representative last week. The fees go into the A. A. U. treasury. Carter is a salaried employee of the union, at \$1,500 a year.

"CYCLE ROW" AND "THE PUSH."

I was treated to a trip to the city the other day, together with a cycling friend of mine, who is city bred and one of "the push." By him I was invited to dinner at the "Rag Shop," a place of which I had often heard. My friend and I strolled down "Cycle Row," and he kindly called my attention to the various establishments and made comments upon each one in a most interesting way, for he is excellently well informed. I wish that I could detail his remarks, but space and the prospective libel suit forbid. We dropped into Charlie Seig's place and shook hands with the genial manager, who at once informed us that he had done the biggest retail business of the season in Chicago, and that he was going to do several million dollars' worth (I think it was) of business next year. Then he duly impressed us with the size of the

orders he has already given for 1893 machines. Then we called on Plumb—Plumb, the hustler; Plumb the witty; Plumb the wise. He didn't say much, but he looked unutterable things, and as I happen to know the young man, lo, these many years, I expect to hear that his people have cut a wide swath in the fall of next year. Then we dropped in on Horace Bell and the renowned "Artie"—bless his handsome face and limber hind [?] legs—and we had an animated discussion regarding the merits of twenty-six pound roadsters, geared ordinaries, and the elliptical chain connector. Mighty pleasant people, the Humber folks, and they reported good business and more coming. Through a door in the Columbia office we made entrance into the warerooms of the Union's representatives. My friend very irreverently inquired if "pink hair" was in. The clerks evidently did not understand. Then he asked where he could find "sorrel top." "Oh, Herrick," said the clerk; "he has gone out." We went out, too, and slipped into the Coventry Machinists' Company's establishment, where we found Conkling and Slusser, who greeted my friend with due regard, for he is an authority, but they fell upon me after the manner of city people when conversing with country bumpkins, and having engaged me in an argument, pooh-poohed my notions as having moss on them, and in their own minds, at least, that what I didn't know about things in general would fill a large book. Great boys, those two; hail fellows both, and old-timers. Marrett did well when he got them in Chicago.

**

Then we went over to the Quadrant store, but Mr. Hughes was not in. He is in Philadelphia, I am told, trying to save his company something from the Sweeting wreck. I wish him luck, but would hate to bank on his chances. Then we dropped into the Pope company's store and had a visit with Nicolet, he of the wonderful balancing powers. If his brain is as nimble as his body, what a bookkeeper he would make! We saw a relay Columbia fitted with a flattened sprocket wheel, and I really begin to believe, from what I heard, that Pope has made some kind of a deal with the Freeport people. Until I saw it I did not believe it. From there we went over to Taylor's palatial emporium (that sounds a bit "hand-me-down" like) but the "Prince Charming" of old was not there, having taken himself over to Europe. As we came out we fell in with some of "the push" (so my friend said, any way), and took our way after them to the "Rag Shop," which along about noontime seems to be the mecca toward which the bulk of Chicago bicycle men turn. I am told that this eating house gets its name from the great dry goods establishment above it. We were seated at a long table in the corner, and were waited upon by "George." At the same table was gathered a greater number of cycling celebrities than I have ever seen before—Van Sicken, Barrett, Lumsden, Nicolet, Keator, Davis, Ballard, Slusser, and a dozen lesser racing lights, while Berger, Jaffray, Erwin, Spooner and one or two others represented the literary side of the sport. Mischief, fun, wit and wisdom, nonsense and "airy persiflage" are bandied from one end of the table to the other. Arguments more or less profound on all sorts of possible and impossible subjects are heard on all sides. Like most things originated in Chicago, the "Rag Shop" is unique, so far as cyclists' corner is concerned, at least. Every stranger bicyclist visiting Chicago should go to the Rag Shop for at least one dinner: it is more than likely his stomach will not allow him to go twice.

LA COTE MAL TAILE.

Among the callers at our New York office the past few days were: Samuel Snell, Edward Mushing, Joseph Lucas, England; Frank A. Egan, editor *Sporting Life*; C. E. Schaff, manager for Gormully & Jeffery, Boston; C. H. Weld, Royal Cycle Works, Marshall, Mich.; Guy P. Wilson, late of Baltimore; Achille Phillion; W. L. Fish and L. Crondel, Newark; W. F. Murphy, W. S. Campbell, W. M. Perrett, Walter Masterson, A. B. Rich; W. E. Smith, Smith Wheel Manufacturing Company; L. J. Phelps, of Phelps & Dingle Manufacturing Company; J. Ives, New York Belting and Packing Company; Edwin Oliver; Mrs. M. L. Peck, president Cosmopolitan Cycle Club.

**

The Secret Session.

What a bombardment the *Ancient and Honorable*, the good old organ, has been getting all along the line for that "Grand Secret Concert," given recently by the racing board of the L. A. W. While lashing the organ, probably the thought did not occur that it was the men who placed the power in the hands of the Wheelman Publishing Company who should be the parties to lash and not the men who would naturally defend their property—their stock in trade. You do not hear of men with valuable patents allowing other people to use them if they can possibly prevent it; therefore the organ is only using a bargain to the best advantage, and all the howls of the universe will not move it from the advantageous position the wise men who run the league placed it in. Joe Dean, a lawyer and a smart young man, knows all about "that contract," and knows all about its validity, you can rest assured. Why an amateur athletic body should be afraid to let the world know of its work and purposes is another thing, and why such a deal was made with one paper might also be open for debate; but both these things were done, and not much to the credit of amateurism, or the guardian angels of amateurism, either. But secret sessions seem to be the order of things these days. I noticed in the Boston papers, last week, that the clever Bishop Philip Brooks complained of the secret methods employed by the Episcopal church bishops, and proclaimed it un-American. Yes, and un-English, too. What "fake" are those good men going to spring on us from behind closed doors? Possibly a new racing board brand of religion, warranted to fill all the requirements of the amateur and professional, elastic and full of inner tubes.

**

Respects to the Italian.

"Who is La Cote Mal Taile?" (with much difficulty in pronouncing). This is a frequent question. Many a time have I been asked who the writer with the odd signature is, and who keeps his identity out of reach. L. C. Boardman of the *Recorder* steps into the eastern office of this paper occasionally, and fires off more interrogations in one minute than can be well answered in fifteen. Said L. C. Saturday:

"Who's that fellow with the Italian name who writes for the REFEREE?"

On recovering the writer sparred for

wind and replied: "An old timer."

"An old-timer, eh," said Boardman; "an old fool, I guess. Wait until I get at him to-morrow."

And on the morrow he said:

"La Cote Mal Taile" is the title of a writer in the REFEREE, the journal that reaches the trade and wheelmen generally. The writer is one of the good old "has been," and takes advantage of every opportunity to rake over the doings of the day among the wheelmen. His last assertion about the parade is on a par with the one he made several weeks ago about high-grade wheels requiring inner tube pneumatics. This last statement is made despite the Columbia and other machines with S. P. tires.

I'll back L. C.; the Italian is getting too frisky. What was wrong with this, the largest parade, by actual count, that was ever given, outside of what was caused by the divisions other than those of the wheelmen and, of course, the fool antics of a few—who couldn't be stopped? Then, again, the "old 'un" asks Knapp to come forward to the mourners' bench, being that Eck has declared for straight racing and the church. What on earth has Knapp ever

would not have dared to take advantage of the father's leniency and conceived the idea of the trip as proposed. Taking advantage of the loose methods and rules adopted by the father for the guidance of his children, the child gets bold and in turn is threatened with abandonment and disgrace. It is a clear case of abandonment, and not a pretty spectacle, either. The racing board knows full well that the men who go on the trip have had their expenses paid by somebody all summer, but now objects when the same somebody wants to pay them for the *Sporting Life*. The trip at the best was an ill-advised one, and the promoters should have seen that the racing board would view with jealous eye any encroachment on their rights as chief corruptionists of our angelic amateur hosts; the Egan boy should know better than invade the sacred territory. What fame would come to an artist who could portray the man of putty, the amateur, in his various forms and moulds as fashioned by his maker, the racing board, since 1885. I learn that that iniquitous car load of divisible ones will not start for the balmy Pacific until January (if then), but Br'er Egan has had his little "ad." out of the racing board and the press, all the same. The professional league?—well, that's another story!

Incidents of the "Recorder's" Piano Contest.

done to beg forgiveness for? Why, Knapp, instead of mourning, is singing psalms of joy over being appointed the Victor agent for the entire territory of lower California (with two assistants) after winning golden opinions in San Francisco, Sacramento and Oakland. That record of Johnson's goes down hard with La Cote Mal Taile, and in his vicious dig at Eck for bringing out "unknown wonders on unheard of tracks," he was just swallowing the tail of the crow that others had to masticate, just as he has had to do. That elliptical sprocket record goes, young man, and the sooner you come forward to the mourners' bench the better it will be for you. The stains of the unbelieving will be easier to wash out. Now is the day of salvation; come, "old 'un," get in, or out, of the wet.

**

The Trip Postponed.

I feel sorry for the racing board and the *Sporting Life* car trip scheme. It is a case of abandonment by the father of the child. The *Sporting Life* car scheme is the offspring of the racing board of the League of American Wheelmen, which called it into existence, and if it had not been for that, the cycle department of *Life*

Speaker Burdette.

Some time ago the league organ printed articles editorially deprecating dragging national or state politics into the affairs of the L. A. W. Recently, while walking in Harlem, I noticed a flaming sign which announced that the Harlem Wheelmen held forth in the hall above as a democratic political club. Buffalo and other cities, it seems, have political cycle organizations. I noticed last week, in the *Sun*, a dispatch which stated that Hartford had nominated Charles L. Burdette for member of the state assembly, and the dispatch added that Congressman Burdette (to be) was president of the League of American Wheelmen. While seated in the sumptuous office of the Hartford Cycle Company Friday night, talking to D. J. Post, I asked the noted cycling politician what the little game was. "Well," said Post, "we took a crowd to the meeting and nominated Burdette, because, if elected, he will surely be speaker of the house, as a Hartford republican invariably gets the honor. If Burdette is speaker he will name the working committees, and that's where we will get in our work for roads. Burdette will be supported by many democrats with the Pope Manufacturing

Company and in our employ; also by Bil lings & Spencer's employees for the reason that they know cycling will be benefited, and as a starter we have issued to-day this circular." The circular reads as follows:

TO WHEELMEN.

The following matters should be brought before the general assembly at its next session that begins in January, 1893. Every point is of the greatest interest to every member of the League of American Wheelmen.

1. A bill for the incorporation of the Connecticut division, L. A. W., is needed.
2. A conservative bill regulating the rights of wheelmen in the streets and on the walks is needed.
3. A bill making the penalty for stealing a wheel at least equal to that for stealing a horse is needed to stop the alarming increase in the theft of wheels.
4. A uniform lighting law providing for the proper regulation of ordinances relating to the carrying of lanterns on wheels is needed.
5. An inquiry into the rights and powers of towns regarding the taxation of wheels is needed.
6. A road improvement bill that will stop the great waste of public money and provide for permanent roads properly built and cared for, is needed by all.

Although the wheelmen will profit the least by good roads, yet having taken up this work as pioneers they should continue their active, earnest labors in carrying it through to completion. It is a question of national importance, but to the League of American Wheelmen belongs the credit of the greater part of the missionary work, and they should retain, if possible, the credit for the actual work in legislation. It is possible for every rider of a wheel in Hartford to aid in advancing the interest not only of the league, but of all users of a wheel by aiding in the election to the next legislature of a representative wheelman who knows the aims and objects of that part of the cycling world that exists as an organized body, and also the needs and requirements of all interested in the use of the wheel, either directly as riders, or indirectly from their connection with the industry in any manner.

A vote by each member, or one secured by each member, will count for and greatly aid in the proper representation of the wheelmen in the next legislature so far as Hartford is concerned, provided you wish such a result.

This will, no doubt, be followed by something more direct—an invitation to vote for the anti division candidate.

**

A Thieving Lunatic.

On Sept. 12, a well-dressed young man entered the cycle store of Alexander, at Worcester. He stated that he was about to purchase a wheel, and that Dr. Daniels, of the state asylum, had recommended him to call on Alexander. But before the purchase he would like to try one. "Here's my personal wheel, a scorcher. You can try this, and if it suits I can make you a little reduction from the usual price, as I have used it a few weeks," said the dealer. The young man took it out, and after he had done so Alexander's mother, who had been closely watching him, asked her son if he knew the man. "No," he replied, "but I know Dr. Daniels." "Well, I don't like the looks of that man; he looked like a thief," said his mother. Alexander felt uncomfortable when the man did not return in fifteen minutes. After thirty minutes had passed he had notified the local Hawkshaws to look out for the chap. Then he telephoned Boston and other points and finally issued the following:

STOLEN.—Sept. 12, 1893, from L. M. Alexander, No. 191 Front street, Worcester, Mass. (telephone 3423), an 1892 pattern TOURIST, No. 1492 (new); Hunt scorcher saddle, Bidwell-Thomas tires; by Frank J. Holland, a person about twenty five years old, five feet eight inches high, dark hair and moustache, with a distinct squeal to his voice—one eye slightly blood-shot.

Dr. Daniels denied the recommendation but acknowledged that he had a person named Holland in his care for quite a time—and a harmless lunatic he had been. But it seems the chap is a born thief and his visits to various asylums had been only a subterfuge to escape the penitentiary. Numerous thefts had been brought home to him, but he always managed to convince the judge that he

RACING BOARD JUSTICE,

As it appeared to the unfortunate 32,300 members of the L. A. W. who are kept in ignorance of the actions of the executive committee and racing board.

had a screw or two loose. The funny part of it is that he was seen in Worcester for two days after the theft, while the local police and those of other cities were looking for him. Want of palm grease is supposed to account for the poor speed of the Hawkshaws, as Mrs. Alexander declared to a REFEREE man that a reward would have done the business, and if the fellow had stolen a \$25 horse he would have been caught instant. Mrs. Alexander, in describing her want of confidence in the man, said: "When he grabbed the wheel to take it out there was an exultant, devilish look in his eyes, which said plainly, 'this is mine.'" Mrs. A. says her long experience with the world enables her to spot a saint from a sinner at a glance. Ralph W. Sears, a Cambridgeport dealer, reports that the same lunatic copped two of his wheels a few days later, and Hunt, of Westboro, thinks the same party borrowed a wheel from him about the same time. Strangely enough, this wheel was found between the railroad tracks near Worcester, all smashed, and it looked as if a locomotive had struck it. The alleged lunatic's home is in Boston, and his brother, who is studying for the priesthood, feels the matter keenly. The parents say the cycle-loving son is incorrigible and a black sheep. Alexander feels sore because the league organ did not raise a proper hue and cry over the matter. The only hue it raised was at so much per line.

Very Popular Wheelmen

The REFEREE made mention in wondering way recently of the immense voting going on in the *Recorder's* columns for the most popular wheelman in New York, and stated that Albert, the professional, had a heavy vote. It was suggested that *Recorders* were being

bought in job lots for the ballots they contained. The REFEREE hinted to Boardman, the cycle editor, that possibly some printer was voting, a hint which L. C. waved off, with a statement that no one could play such a racket without detection. Albert of New York, and Holmes of New Jersey led, with "Pap" Worden, Trenchard and Vose of Brooklyn close up. It came to within ten days of the end of the voting, and the leaders' figures jumped a thousand a day. Business Manager Turner smelled a mice. He got an expert to examine the ballots, which soon proved that Albert's, at least, were from some printshop. He confessed to the *Recorder* and REFEREE, and through extenuating circumstances was let down easy, his name not again appearing. In the meantime Holmes jumped away with the lead, and was closely followed by an actor-like looking chap named Vose, from Brooklyn, whom few cyclists know. Holmes, however, is well known as the president of the Associated Cycling Clubs of New Jersey. Cheers greeted the pair as they entered the straight, closely followed by Trenchard. The latter was backed heavily to win by a Brooklyn church and a Sunday-school, which was in return to get the "piano." The struggle was a grand one; Zimmerman at Springfield wasn't in it. Worden confessed his pneumatic had gone wrong, and he stopped to cheer Holmes. Vose, who is a clerk in the Borden Condensed Milk Factory, offered prizes to a hundred drivers to collect *Recorder* coupons, and Holmes paid messenger boys for large packages of coupons. Strange to say, the boys made good time for their money. The cheers could be heard over in Newark, as Holmes swept by the *Recorder* stand a neck ahead of Vose. A brief notice the morning after the race finished an-

nounced "that owing to some bogus votes the result was in doubt." It seems the friends of each competitor, had schemes of their own, known or unknown to the competitors, and each scheme was as the REFEREE had suggested. From the genuine ballot a plate had been made by photographic process, an exact duplicate—and the printer did the rest. Albert keeps quiet, Holmes laughs and frankly acknowledges that a game was played on him by somebody, and the messenger boys and his effort to become popular had cost him—well, a good bit of cash. Vose was mad, because he had given away a rubber suit and rubber boots as prizes to the two who brought in the largest number of ballots. Trenchard and his church friends—and the railroad people he works for—feel so so, while Worden is tickled to death because Vose told the *Recorder* manager that Worden was not known much anywhere outside the aristocratic club of which he is a member; that few Brooklyn cyclists knew him. No one gets the piano, and there is a lot of discredited ballots for sale. Thus endeth the New York vote for the most popular wheelman.

Some Gay Nimrods.

Albert Linden Pope, or the "little colonel," as some call him, showed me a murderous-looking outfit in Boston last week. He said: "Old man, you ought to come along." But after I had felt of the edge of an immense knife, looked down the muzzle of a Colt's navy revolver, lifted a death-dealing shot gun and rifle and examined some full-roaster gum boots and a shooting jacket, I fairly begged to be excused.

"We start next Saturday," said Albert, "and the company will be A. S. Pattison, C. S. Walker and W. C.

Walker, and possibly Kirk Corey. We go to Canada—the lower Provinces, of course—and will be away a week."

The party will take a car-load of victuals along, and Albert, Jr., swears he will kill moose, lions and tigers, or annex Canada to the United States if he fails. D. J. Post worked until 10 o'clock Friday night in order to finish up an inventory of stock before making a trip to his people's farm in the wilds of New Jersey. He sent W. C. Marion ahead with three large cases of destruction and grub, while he followed with I. B. Potter and Eddie DeBlois. The party will be away two weeks, and will not kill "skeeters" exclusively. Mr. Post says the machinery of the L. A. W. is all right and will not require his personal attention for a time. *Good Roads* goes marching on.

The Boston Press Club.

With Daly, of Bretz & Curtis, and Jack Holding, G & J's bookkeeper as bodyguard, I took in the opening of the Boston Press Cycling Club's new quarters, 44 and 46 Warren street, and met with rough treatment at the hands of President John C. Kenison, who is well known as the *Herald's* cycling man. President Kenison wanted to ruin my Corbett hat for some reason. One of the prominent pictures on the club table was one of two men, taken in London six years ago. One of the men was well known in cycling, and met death while swimming at Westboro three years ago. All know the eccentric but good fellow, John Purvis Bruce. No one remembers the lad with more kindly feeling than the writer, who stood at his side in Thomas' on Cheapside, E. C., when the picture was taken. Jack said to me when walking along Fleet street one day, while people looked curiously at the curly-headed, oddly-dressed figure,

1893.

ALWAYS IN THE LEAD!

We now have samples of Telephone Cycles for "1893."

AGENTS wanting exclusive territory for a strictly High Grade machine will do well by corresponding with us.

GENT'S WHEEL Weighs 34 Lbs.

LADY'S WHEEL Weighs 36 Lbs.

Kirkwood, Miller & Company,

PEORIA, ILL.

"Don't go up to Gibson Square to-night; stop at Anderson's with me—I feel kind of lonesome." On retiring he placed two frightful looking nickel-plated revolvers under his pillow. This startled me.

"What in the devil do you want those things for?" I inquired.

"You don't know how soon you may want to use them," he replied. "London is full of thieves and murderers."

"All right; but you turn the shooting ends away from me," was my reply, and Jack talked me to sleep telling about a hunting trip in Scotland. I was in his company a good deal in this country at times, and abroad, and never want to meet a truer friend and considerate adviser than the boy who lies buried at Westboro. I "swiped" that picture. It was wrong, but I wanted it. There were at least 200 people at the club house and a jolly time was had. Speeches were made by all the prominent ones present. J. F. McNally of the *Herald* sang the following ditty at the club opening, having written it the same night:

"IF THE CYCLIST ONLY HAD HIS WAY."

If the cyclist only had his way,
What a queer world this would be:
No one would walk and none would pay,
Transportation would be free.

There'd be no elevated roads,
And engines could not go;
The electric cars could get no loads,
For they would be too slow.

A bridge to England would be built,
There'd be no toll to pay,
And flying cranks would race across
And go there in a day.

The streets would be concreted,
There would be no noisy teams,
There would be no hoofs to clatter
And to wake us in our dreams.

There would be no walking up steep stairs,
We'd ride up on a wire,
And lovers could elope in pairs
Despite the old man's ire.

You could get a letter from anywhere,
And get it in a day;
The world would be one dream of bliss,
If the cyclist had his way.

Policemen would escape the corns
And bunions on their feet
They raise while slowly tramping
Around upon their beat.

The second story worker would
Find it hard to ply
His occupation with those cops
A-moving 'round so fly.

Waiters, then, could serve your meals
Like lightning while you wait;
Telegraph boys would get along
At a trifle better rate.

Reporters then could laugh
At herdic drivers and their fares,
And all could then get home at night
To sleep away their cares.

The firemen in a jiffy could
Get to all the fires,
The engines would have pedals and
Great pneumatic tires.

And there would be no cavalry
Or soldier boys on horse;
The militia and the naval boys
Would ride on wheels, of course.

In winter there'd be snow machines,
So all could take sleigh rides.
And 'tached in front a snow plow
Would clear the way besides.

There would be perpetual motion—
At least that's what they say;
What a fast world we would live in
If the cyclist had his way.

Instead of perambulators
He'd have mother ride a wheel;
With baby in a basket
Made of finely woven steel;

While doggy, close behind her,
Would work his little byke,
The pet cat bringing up the rear
Upon a midget type.

All could enjoy the fresh air,
Be merry, light and gay,
And the world would be a paradise
If the cyclist had his way.

MORGAN.

"DEAD-BROKE" WILEY ARRIVES.

He Reached Chicago Sunday, Soon After Five O'clock.

After beating his way across toll bridges, through toll gates, over ferries; begging his meals and lodging and inviting himself to partake of the hospitalities of wheelmen for three weeks, Harry Hillard Wiley arrived in Chicago from New York at 5:05 o'clock Sunday evening. He put in his appearance at Pullman at just 2 o'clock, while those on the C. C. C. ordinary run were at din-

ner. He was given his meal and proceeded to the city in the rain with several Chicago men. Wiley rode an Eagle safety, carried a rubber coat and a change of underwear. On each side of the machine was a placard inscribed "New York to Chicago—Dead Broke." He had expected to reach Crate on Saturday night, but only got to Mokence. From there to Pullman is sixty miles, and this distance he covered in seven hours, the roads being in a very poor condition. His general route was

through Trenton, Lancaster, York, Gettysburg, Hagerstown, Cumberland, Wheeling, Zanesville, Columbus, Dayton and Indianapolis.

Wiley carried an autograph book, in which wheelmen, hotel and boarding-housekeepers, bridgekeepers and others made pencillings, telling of his unlimited cheek and how and when he arrived at a given point or how he secured his meals. He had no startling experiences on the trip other than falling into the Chesapeake and Ohio canal, and having his tire burst. He says he is twenty-four years old, but looks thirty; he weighs about 140 pounds and was dressed in the ordinary cycling garb. The picture herewith was sketched by the REFEREE artist, unknown to Wiley, while he sat in the REFEREE office Monday afternoon. Wiley does not see how his trip has injured cycling, for, he says, everybody gave him a right royal welcome and did everything to help him along. At any rate such performances do cycling no good. If he had been unable to pay his way and wanted to reach the World's Fair city there would have been some excuse for the method employed; but as it was it proved only an advertising dodge—something by which notoriety might be gained. Wiley intends to locate in Chicago and will write an account of the trip, in a humorous way, for some paper, or will put it in book form.

According to the eastern papers the Brooklyn Bicycle Club has decided to build and operate, in connection with its city house, a country annex. A committee has been appointed to select a site for the new house, and it is restricted only to the provision that a water front is indispensable. This will limit the field to be gone over to either Sheepshead Bay or Bay Ridge.

The Cream City's Track Scheme.

MILWAUKEE, Nov. 7.—It appears that all the talk about a race between Sanger and Zimmerman has resulted in nothing. It is a fact, however, that Sercombe deposited \$500 with the *Tribune*, which still remains there and uncovered; and as the days go by the chances of winning or losing a stake on the "gladiatorial contest" becomes more and more obscure. If Sercombe was making a bluff, as has been claimed, why don't the great inducer, Troy, call him down and release the affair of its present embarrassment?

Among the possibilities of the near future is a quarter of a mile track and an out-of-town club house. The project has set the wheeling fraternity agog, and it will no doubt be received with enthusiasm on every side. The originators of the scheme are members of the Telegram Cycling Club, an organization that has recently sprung into existence, and which will no doubt find ample means for obtaining the necessary "stuff" for carrying it to a successful issue. It is the intention to buy a desirable site on the White Fish Bay road and erect a commodious club house, track, etc. The club has interested a number of prominent business men who are interested in cycling in the matter, and they have agreed to support the project and subscribe for the majority of the stock. Sanger and other prominent riders will ride under the Telegram Cycling Club colors next season. The crowning necessity of wheeling life in Milwaukee is a suitably-located track and club house, and the scheme will receive hearty support.

The race track at the exposition building will be completed by Wednesday, and it will no doubt prove to be one of the fastest indoor tracks in the country. Great interest is manifested in the races, which take place Thanksgiving day and evening.

The commander-in-chief of the army of fun will have charge of the Milwaukee Wheelmen's minstrels at the Academy of Music Nov. 16, and joy will reign supreme. Forty (count 'em) burnt cork stars will greet the audience on the rise of the curtain. Delegations from all the cycling clubs in the state have signified their intention of taking boxes, and a phenomenal success is assured.

JACK ROYAL.

The Denver Ramblers' New Home.

DENVER, Nov. 5.—The accompanying etching is that of the proposed club house of the Denver Ramblers. The club has recently gotten a good-sized move on itself, and since the project of building a large house has been undertaken it has increased in membership, in three weeks' time, from forty-five to nearly 200. This shows what energy can do, and also that the interest in Denver has assumed large proportions. About three weeks ago the subject was brought up at a regular meeting. The money was secured, and that helped to enthuse the outside wheelmen. On Oct. 27 the Colorado Wheelmen (which contains a majority of the racing wheelmen of Denver) came into the club twenty-five strong. At the last meeting eighty-nine applications were acted on,

and there are nearly twenty-five more awaiting the action of the December meeting. It is expected that before the first of the year the club's membership will have reached 350 members.

The proposed building, as will be seen, is to be three stories and basement high, and 50x100 feet in dimension. It will contain all the appointments and conveniences of a first-class athletic club, including gymnasium, swimming pool, running track and repair room. It is expected that ground will be broken about the first of the year.

The news of Robert Gerwing's reinstatement was received in Denver with the greatest satisfaction. Mr. Gerwing deserves to be an amateur, since he has kept out of all races for nearly two years, hoping that the happy day would come some time.

At the last meeting of the Ramblers the club decided to hold a ten-mile road race on Thanksgiving day. Some fast time is expected, as Gerwing, Block,

THE DENVER RAMBLERS' NEW HOME.

McGuire, Taylor, Pyncheon and others will compete. A sewing machine is among the list of prizes already secured.

The Denver Wheel Club admitted five new members at its last meeting. This is doing pretty well, considering the big scheme the Ramblers have on hand. But it is expected that the two clubs may eventually come together and support one.

The Sperry Cycle Company will, after January 1, succeed the George F. Higgins Company as the Columbia agent. The new firm will do some good work for the "blue rims" during '93.

W. E. Miles, manager of the Overman's local branch, has presented a fine engraving of the great race, "Salvator and Tenny," to the Ramblers, encased in a handsome frame. This firm has a unique "ad." in front of the store on Eighteenth street. It is a single Victor wheel which is kept constantly revolving in a glass case, and attracts much attention from the passers-by.

George Hannon has returned from a hunt in the mountains. He says he lost no bear but managed to bring down a cinnamon weighing 500 pounds. George says he has given up racing, as he thinks it is just a little out of place for a racing man.

SANDY.

Buffalo Clubs Trying to Organize.

BUFFALO, Nov. 7.—The Furhmann brothers and George Mathews, all of the Ramblers B. C., are having a triplet built of especial construction, and on the latest lines, which they are anxious to use for training as soon as the frosty weather sets in. These gentlemen intend next season to do some strong work. They are included among the fast men of their club, and should show up well in all events on track or road.

The opening article in the latest issue of *Good Roads*, entitled "The Speculator and the Country Roads," by Albert C. Stevens, editor of *Bradstreet's*, is just such an emination as might be expected by a person of Mr. Stevens' ability and position. He is an old Buffalo boy and used to be a wheelman 'way back in the sixties, when the good old Loneshaker was all the rage. Many were the rides we took together without a thought that thirty years later we, as men, would be mounted on so vast an improvement of the velocipede, which was then considered something for the schoolboy's exclusive use.

A call for a meeting of the Buffalo Wheelmen's Protective Association for Nov. 15 has been issued. It is most earnestly hoped this call will be heeded. At

cut and the interests of the wheelmen at large developed, such as their protection by legislative and civic power.

With the existence of a Wheelmen's Protective Association in every large city and town between New York and Chicago, the execution of the scheme of having an asphalt roadway between the two largest cities of the new world might easily be accomplished, because there would be in each place one united body working with one interest to accomplish one result. What a scheme it would be! To accomplish this would be a sufficient object for the formation of such a society. Then there are the many and numerous side issues, boundless in extent. It is very necessary for the good of the wheeling fraternity that this association meet at once and make permanent that organization, which is founded upon a basis so broad that every wheelman should be able to claim its protection.

WILLIE DUNN.

Jacksonville Society Doings.

JACKSONVILLE, Ill., Nov. 7.—The Lockwood Cycling Club has given several club dances recently, one Oct. 19, another Oct. 28, and the last Nov. 4. Cards are out for a fine full dress affair, which occurs Thanksgiving night. This is one of the series. The others will occur during the holidays and another about the first of March. The music will be furnished by Gehrig's orchestra of Pekin.

The relay ride between Waverly and Jacksonville was postponed on account of a heavy rain, but the club expects to try again as soon as the roads are rideable. The club also expects to bring several first-class entertainments to its city during the winter.

A New Sporting Paper.

The New Orleans *Sporting and Dramatic News* is to be published in the future by three of New Orleans' most prominent cyclists. Major W. W. Crane, the president of the company, is one of the oldest wheelmen in the United States, and has been one of the most prominent in the south. W. C. Grivot, vice-president of the company, is chief consul of the Louisiana division. J. W. Dodge, editor and business manager, is one of the south's most prominent cycle correspondents. Robert M. Slusser of the Lincoln club, Chicago, formerly of New Orleans, will represent the publication in the World's Fair city.

To Distinguish the Riders.

With Columbias having blue rims, Kenwoods yellow, Rudges red, Ariels green and others with some bright color, the race-attending crowds of '93 will know whose make of wheel wins, a first at least. Now riders should wear vari-colored caps and suits, that they may be distinguished. Old riders advocate the idea. An instance of the success of the idea was the wearing of a terra cotta suit by George Barrett at the Chicago tournament. After the first race every one knew where Barrett was in the races, and none could distinguish the other riders.

A Prominent Milwaukee Club.

Among the various cycling organizations which have contributed towards making Milwaukee prominent in the wheeling world, the Comet Cycling Club is deserving of a leading position. Richard S. Baird, whose picture is shown herewith, is its hustling president, and it is to his untiring energy and great love for the sport that the club owes its existence. Mr. Baird is an old-time wheelman, and dates his initiation into the mystery of the wheelman's craft back to the time when the bone-shaker was the king of the road. During a visit to De-

THE INFANT PERIOD IS PAST.

We are the Oldest and Largest Jobbers of Cycles and Sundries in America, Handle a Large Number of Lines, Carry an Enormous Stock, Quote Bottom Prices to the Trade, Guarantee Prompt Shipments, Have Exceptional Facilities.

If You Have Never Investigated Our Lines and Ways of Doing Business Do So Now. Be With Us for 1893. Our Lines Will be More Attractive Than Ever. They Will Make you Money.

We have some leaders in high-grade Safeties that are World-Beaters: The "RUDGE" is one, the "SYLPH" another, and the "OVERLAND" a third. A better combination cannot be found.

Would you like to talk '93 BUSINESS? If so write us. *Catalogue, with changes to date, mailed Free.*

ROUSE, HAZARD & CO., 89 G STREET, PEORIA, ILL.

MANUFACTURERS, IMPORTERS AND JOBBERS.

Our Cycle Business
is now
Fourteen Years Old

IT'S Healthy,
Vigorous and
Growing.

It extends to every state and territory in the Union, as well as several foreign countries.

SO BRISK are the inquiries and demand for SYLPH CYCLES that seemingly there is no end to the '92 business and beginning of the '93. We would say, however, many riders of cycles have come to realize, during the past season that "Sylph Cycles Run Easy."

While this is one of the most important features in any wheel, these same riders have also discovered an even more important feature, viz: That SYLPH CYCLES not only

Run Easy, But Ride Easiest.

Some riders think them the acme of Perfection, and this, coupled with our own experience in the manufacture and sale of the machines the past season leads us to believe that they are the nearest perfection of any wheel on the market to-day. So satisfactory have they proven that we shall continue the '92 patterns unchanged for '93, with the exception of improvement in Pneumatic Tires. We solicit correspondence from live dealers who wish to control territory for the sale of the easiest riding and running safety on the market—a novelty in itself and a splendid seller. Catalogue free.

ROUSE-DURYEA CYCLE CO.,

89 G Street, PEORIA, ILL.

troit he became enamored of the bone-shaker, and purchased and brought one back to Milwaukee. It proved to be quite a curiosity. From that time to the present he has changed his mounts with the evolution of the wheel, and at present rides one of the very latest patterns. Mr. Baird is prominent in a social way and is identified with many leading clubs, among which are the Calumet Club, Milwaukee Recreation Club, Mat-a-wauk Canoe Club and the Milwaukee Wheelmen. The Comets have a limited membership of twenty five, but it is proposed at the annual meeting in January to raise the limit to fifty. The club has pleasant and elegantly furnished rooms on Mason street, in the Mariner block, and may be said to be in a very healthy condition. During the past season its club members have been prominent on the path and road, and next year expect to develop riders of the first magnitude. The club will, during the winter months, devote its energies to the social side of cycling, and has arranged for a number of balls and other social events.

The Englewood's New Home.

Five years ago the Englewood Cycling Club was organized, and has enjoyed a prosperous career ever since. The club moves into its new home on Sixty-fifth street near Wentworth avenue this week, and now congratulates itself that the new home is unequalled in Chicago for completeness of appointments and accessibility of location. A mansion was transformed for the club, a fine, large hall and other improvements being added at a total expenditure of over \$10,000. In view of the club's present prosperity it may be well to state that the membership is now 150, a hundred more than a year ago, an increased income annually of over \$1,800. The new home is a model of comfort and elegantly

suited for the cyclists' uses. The basement is devoted to a wheel room ample for the storing of every riding member's wheel, a complete repair shop being added, with tools for the most difficult repairs. The kitchen, dining rooms and servants' quarters, also two bowling alleys and cloak rooms are in the basement, and lockers for the members as well. The main floor has the two large and elegantly furnished parlors, the office and billiard room. The large hall is entered from this floor. This is 50 by 55 feet, with eighteen-foot ceilings. The gymnasium apparatus is easily removable for balls, parties and entertainments. The indoor ball team has a rare chance here and will uphold the club's honor in that great field. There are cloak rooms on this floor. The upper floor is devoted to the directors' room, reading, card and smoking rooms and the Ladies' Englewood Cycling Club's room, the ladies being auxiliary members.

The Prince of Wales Will Ride.

A special cable to the New York World, dated London, Nov. 5, says: London newspapers are always very careful as to what they say about the Prince of Wales, so it is a little surprising to see the announcement made that the Prince is taking an active and sympathetic interest in bicycling, and that it is not at all unlikely that very soon he may be visible to the naked eye pedaling a rubber-tired wheel up and down the roads.

One journal suggests, as the Prince is rather fat, that he would do well to get his physician's advice before risking his life and health on one of these whirligigs.

In view of the fact that bicycling in England is given over pretty much to the cheaper class of persons, commonly known as "bounders" here, the chances

that his highness will ride a bicycle seem very remote, in spite of what the newspapers say.

Sunday Riding a Pitfall.

At Hartford, Conn., Sunday before last, Rev. Henry H. Kelsey talked about "Moral Pitfalls for Young Men" at the Fourth church. Mr. Kelsey placed bicycle riding on Sunday for pleasure among the insidious pitfalls that lurk for the young men of to-day. "The tone of the habits arising out of these Sunday bicycle excursions," he said, "is downward tending. I know how natural it is for a few young men to get together and go off for a Sunday spin. But it takes them away from all the good influences of the day. It is a general pleasure day and leads to other and many things that are worse. I am afraid for the result, though no one enjoys riding a bicycle better than I. It is a pitfall, this Sunday riding."

Tom Reed on the Bicycle.

Ex-Speaker Tom Reed, of Washington, commonly called "the czar," in a stump speech at the Cooper Union, New York, told a story recently as follows: "I was riding in a wagon behind a horse once. We met a boy on a bicycle and the horse began tetering up and down. The boy was a boy of sense and he got off, and the horse went on its way. He knew a wheel, he knew a boy, but he didn't understand the combination. (Laughter.) To-day there is not a horse in the kingdom that does not know all about it. (Cheers.)"

He Fought Successfully.

E. A. Jones, of Sturgis, Mich., an old cycle rider and dealer, has spent over \$1,000 in fighting the sidewalk ordinance of Sturgis. There was an ordinance, but it was not enforced until a drunken man scared a team while trying to ride a bi-

cycle, and then knocked over a pedestrian on the walk. Upon the enforcement of the ordinance, Mr. Jones worked untiringly until it was finally repealed. It was the cyclists' last hope, as the streets are practically unridable the greater portion of the year.

That Car Scheme.

The New York Sun says "the racing board has nailed the *Sporting Life's* scheme. All riders are cautioned against making the tour, if they wish to retain their amateur standing. It is too bad to be thrown down like that, but the racing element will hardly care to risk the chances of next season's riding at the World's Fair meet. They certainly will jeopardize their pur ty (?) if they go on the trip."

The following letter was sent in reply to the one from a manufacturer who wanted an amateur for the trip:

Your letter of Oct. 12, regarding the Sporting Life trip, to hand. I will be willing to take this trip in your interest and ride one of your make o machines and do my utmost to keep it to the front, provided we can come to terms as to what I am to receive in payment. I know the trip will cost considerable, but as you will get the desired advertising out of it which you are looking for, I certainly will want pay for my time spent, and in consideration for spending my time and doing what you desire me to, I will take this trip for you, you paying all my expenses and \$1,000 cash. An early reply will oblige.

Frank Lenz in Trouble.

The Bay City Bicycle Club gave a banquet last night at the California Hotel to Frank Lenz, the touring cyclist.—San Francisco Post, Oct. 25.

Bicyclist Lenz, who is making a tour of the world, was arrested night before last for disturbing the peace while drunk.—San Francisco Post, Oct. 26.

Zimmy now sports a gold-headed cane, presented him by the Asbury Park Wheelmen.

The New Yorkers Bowl.

The bowling schedule of the Cyclists' Bowling League of New York, Brooklyn and New Jersey clubs (six in number, since two clubs withdrew) is as follows:

November 15—Atlanta Wheelmen vs. Union County.	17—Brooklyn B. C. vs. Manhattan.
" 18—Jersey City A. C. vs. Elizabeth.	" 22—Manhattan B. C. vs. Atlanta.
" 23—Union County Roadsters vs. Elizabeth.	" 29—Jersey City A. C. vs. Manhattan.
December 1—Brooklyn B. C. vs. Jersey City.	" 2—Elizabeth A. C. vs. Atlanta.
" 3—Manhattan B. C. vs. Union County.	" 6—Atlanta Wheelmen vs. Jersey City.
" 7—Brooklyn B. C. vs. Union County.	" 9—Jersey City A. C. vs. Union County.
" 15—Brooklyn B. C. vs. Elizabeth.	" 23—Elizabeth A. C. vs. Manhattan.
January 3—Atlanta Wheelmen vs. Brooklyn.	" 6—Elizabeth A. C. vs. Jersey City A. C.
" 11—Union County Roadsters vs. Atlanta.	" 12—Brooklyn B. C. vs. Union County.
" 17—Manhattan B. C. vs. Brooklyn.	" 18—Union County Roadsters vs. Jersey City.
" 24—Atlanta Wheelmen vs. Manhattan.	" 27—Elizabeth A. C. vs. Union County.

In and About Chicago.

The Chicago Cycling Club gives its opening reception of the season Wednesday evening, Nov. 16, at Rosalie Hall.

Thanksgiving night the Lake View Cycling Club will celebrate with a raffle for an Imperial pneumatic, solid gold watch and ten other prizes.

The Lincoln Cycling Club indoor base ball team suffered defeat at the hands of the *Æolus* Cyclings last Thursday evening at Klare's Hall, by a score of 16 to 2. Seven Y. M. C. A. departments in Chicago have cycling divisions; the South Chicago, Englewood, Ravenswood Madison street, California avenue, Medical and German.

The Cook County Wheelmen and First Regiment Cycle Corps indoor ball teams play an exhibition game this Friday evening for the benefit of a prominent member of the Cook County Wheelmen.

The Des Moines C. C. opened its new club house Tuesday evening, the reception lasting from 8 to 10 o'clock, when dancing commenced. During the evening the guests were given the election returns as they came in.

Saturday evening of this week the Lincoln Cycling Club gives a Japanese smoker. The club house is filled with Japanese decorations. Musical talent has been secured and a rice-eating contest for prizes will occur.

Arthur E. Lumsden is captain of the Kenwood club indoor ball team. H. C. Tobey plays with the same team. W. C. Anderson, the popular catcher of last season's Chicago Cycling Club team, plays behind the bat for the Carletons.

The Englewood Cycling Club has the finest gymnasium of any of the local clubs. Competent instructors will be

employed this winter. The hall is 50x55 feet, with eighteen-foot ceilings. The apparatus is movable in case of parties and entertainments.

The Englewood club's annual minstrel show will be much greater this year than last. Englewood society appreciates good talent, and the E. C. C. minstrels, although amateurs, are first-class in every way. Timmerman's Opera House in past years has been packed to the doors.

Both the Columbia Wheelmen and *Æolus* Cycling Club have strong indoor ball teams, and both are members of the Northwest League. These teams together will fill Zemeschek's hall every game, for the Columbia Wheelmen in the old days were members of the *Æolus* club.

The Columbia Wheelmen have extended a cordial invitation to all club members of this city to be present at

noon at a Country School" was given, when the ladies and gentlemen dressed in school clothes and recited the pieces of their childhood days, played the old school games and in many other ways looked backward. The Ravenswood club has all along admitted ladies as active members and found it successful.

Nov. 12 the Columbia Wheelmen raffled a March safety; Nov. 24 the Lake View club raffled an Imperial pneumatic, a solid gold watch and a dozen other prizes, and Dec. 13 the Englewood Cycling Club raffled a Janus safety.

* * *

From Other Points.

The Riverside wheelmen held their first smoker last Saturday evening.

The Manhattan B. C. is arranging a pool tournament for the winter months.

The Toledo C. C. was entertained Friday night by the Walter Emerson company.

The Seneca (Ohio) Cyclers gave one of their pleasant parties last Friday evening. It was a fantan card party and prizes were awarded.

The annual pool contest between the Brooklyn Bicycle Club and the Kings

A G. O. O. RUN.

Chicago Men to Pullman on the Wheels of Old.

The Chicago wheelmen have a reputation for originality and this reputation was fully sustained when the officers of the Chicago Cycling Club announced an ordinary run for Sunday last. The scheme took immediately and was the talk of the wheelmen during last week. There was a general skirmish for ordinaries, Eagles and Stars and all sorts of old machines were brought out. Along toward 10 o'clock the old-fashioned wheels began to accumulate at the club house, greatly to the astonishment of the passers-by. Just seventeen were piled up in front of the door and a like number of riders were within the house. The start was made shortly after 10, and besides the fourteen ordinaries, there was one Star, managed by W. C. Thorne; an Eagle, upon which was Nicolet, while upon a Springfield "Rooster" was Lumsden. Five safety riders who followed the procession were warned that their tires would be minus air if they proceeded further. The roads were bad, but the old-time wheels went along pretty well. On Stony Island avenue, at the Baltimore & Ohio railroad crossing, a charge was made upon the safety riders, and as a result Barrett, Becker and MacFarland had flat tires. After the raid the safety men were fined fifty cents each and permitted to continue the journey. For each dismount a fine of ten cents was levied. Headers came high, twenty-five cents, and were few. Hosford and Erwin were each taxed fifty cents for going out by train, and the first and last man into Pullman each paid a dollar. Van Sicklen was first through the gate, and Root was leading at the sewer. There was a misunderstanding as to what constituted the tape, some thinking the gate and others the sewer. To settle matters Van Sicklen and Root matched and the former paid the fine. Lumsden and W. C. Thorne had almost a neck and neck finish for last place, but the former landed about a foot ahead—the "Rooster" defeated the Star. An immense dinner was disposed of and the party rode back in the rain with "Dead-Broke" Wiley, who arrived in Pullman during the Chicago men's stop. This is how the \$14.90—which was judiciously expended—was collected in fines by Fine Master George Thorne: Van Sicklen, \$2.05; W. C. Thorne, \$1.50; Brooks, .40; MacFarland, .55; Root, .65; P. J. Dasey, .40; C. E. Dasey, .40; Becker, .55; Ballard, .40; Hosford, .50; Slusser, .30; Winship, .65; Bliss, .65; Richardson, .75; Lumsden, .85; Berger, .55; Barrett, .50; Erwin, .50; Nicolet, .70; Keator, .65; Young, .50; O'Neil, \$1.

On Whom is this "Roast"?

W. W. Watts has just cause for action against Editor Sam Miles of the REFEREE and his artist. By some hook or crook, Editor Miles secured a picture of that distinguished cut-throat and lamented murderer, Charlie Dilger, which he inserted in a racing board group, and labeled it "W. W. Watts." And, as if this indignity were not enough, he puts on the caricature's feet a pair of white overgaiters, and sets on a table before it a pitcher of water and a bottle of ink. Every wheelman who has ever heard of Watts knows that he uses water only for fishing purposes, and he has absolutely no use for ink. Reputable editors will swear that he does all his writing with a pair of scissors and a paste-pot. As to overgaiters, the manufacturers do not make them large enough. Nothing than a damage suit can wipe out the insults.—*Courier-Journal*.

St. Louis had an ordinary run Sun

their smoker, athletic and musical entertainment and raffle next Saturday evening, Nov. 12. A March racer will be raffled for the benefit of the furnishing fund.

The Columbia Wheelmen indoor ball team is as follows: R. Fisher, manager; C. Joe Anderson, manager; Edward and Oscar Couser, pitchers; Williams and Holum, catchers; Anderson, first base; Ed. Schulz, second base; A. Lowe, third base; John Erickson, left short; C. B. Hopkins, right short; Stein, centre field.

The Lincoln club's "Japanese smoker," which was postponed because the committee could not secure the necessary talent for the date originally named, will be held Saturday evening. The Lincoln Park refectory has been secured for a dance to be held Dec. 1. The regular monthly meeting of the club occurs Monday evening next.

Every Wednesday evening the Ravenswood Cycling Club house is the scene of a merry gathering, usually a card party. Last Wednesday evening "Friday After-

County Wheelmen is being arranged. Each club has won a series and this season's match will be in the nature of a play off.

Bonner Likes Indiana Soil.

Robert Bonner, of New York, in a two-column interview on pneumatic-tired sulkies and trotters, recently remarked: I wish also to remark that the soil in Indiana is of a peculiarly elastic character. It is springy like rubber, and permits of very fast time being made over it. Why, just look at those two bicyclists, Zimmerman and Johnson. Zimmerman is, I believe, considered to be much the superior, but the other man beat his record several seconds, simply because he had the advantage of the Indiana soil.

This is encouragement for Mr. Williams, of Iowa, and hope for Harry Hearsey and the Indiana cyclists.

The Hopeton Bicycle Club will hold a ten-mile road race on Thanksgiving day over the East Providence or Providence course. The Racing League of Providence holds a twelve-mile road race the same day.

CHANGE OF AGENCY.

CONCERNING COLUMBUS

After Columbus had been on the water for some time his crew arose in mutiny and demanded eggs. Chris. didn't know what to do at first, but finally gave orders for the ship to lay to. It was not long before the crew mutined again, and this time demanded porterhouse steaks. The matter again received the commander's attention with the result that the crew were ordered to the bulwarks. The third time the crew mutined and demanded chicken, and Columbo ordered them to the hatch. Finally they demanded that the trip be continued on bicycles, and poor Christopher was forced to tell them that they would have to see Col. George K. Barrett, inducer and representative-at-large of the

"IMPERIAL" HISTORY

—FIRST CHAPTER.—

IN the beginning we decided to engage in the manufacture of High-Grade bicycles. We determined to make the **BEST**, "Imperial Wheels" in every respect. Now, it is easy to engage in the manufacture of some kinds of bicycles, but it is a different matter to equip a plant capable of turning out "Imperial" Wheels. The makers of "Imperial" Wheels spared no expense in their manufacture, counting not the cost, they shaped their course and sailed boldly and fearlessly through the troubled sea of cyclistic discord toward the goal of harmonious success. Hundreds of thousands of dollars were invested in the developing of "Imperial" Wheels to their best state of perfection; we had them and used them carefully, as well as lavishly. "Imperials" are **right**; we challenge the whole world to produce more perfect and dependable bicycles than those known as "Imperial" Wheels.

The Hill Company's New Wheel.

The REFEREE announced last week the incorporation of the Hill Cycle Manufacturing Company of Chicago. The officers are Mark W. Hill, president and treasurer, and F. T. Fowler, secretary and manager. The new company will place upon the market the Fowler, a cut of the frame of which we have shown. Two lines will be manufactured, a light wheel, weighing twenty-six pounds, and

F. T. FOWLER.

the scorcher thirty-two pounds stripped, and thirty-five pounds all on. The wheel has a straight frame with a braced crank bracket, the braces extending down in a V-shape from under the seat to either side. The wheel base is 44 inches, head 10 1-2 inches. The cranks clear the ground by 6 1-2 inches and the finish is of the very first order. The company plans to turn out 2,000 at least of these machines, all to be fitted with Morgan & Wright tires. Work has started now on stock for next season, a full force, 190 men, being employed. The factory is large, 100x186 feet, and is fitted with every modern machine used in cycle making, all of which are kept busy making parts. Twenty-five wheels will be finished this month.

Mr. Fowler is an energetic young man with a thorough knowledge of the bicycle trade, gained through practical experience, and in the new wheel he is introducing hopes to gain a strong foothold with the dealers and riders.

Recent Patents Granted.

The following is a list of recent bicycle patents, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

485,186. Velocipede saddle; Arthur L. Garford, Elyria, Ohio; filed Jan. 9, 1892; serial No. 417,559.

486,187. Bicycle; Frank M. Goodhue and James E. Goodhue, St. Charles, Ill.; filed Feb. 16, 1892; serial No. 417,559.

485,285. Supporting and locking attachment for bicycles; Walter Lewis, Philadelphia, Pa., assignor of one-half

to George T. Turner, same place; filed Dec. 18, 1891; serial No. 415,529.

485,335. Ice velocipede; Geo. Seebick, Pittsburg, assignor of one-half to John Scheillein, Allegheny, Pa.; filed Dec. 2, 1891; renewed Sept. 6, 1892; serial No. 445,190.

485,345. Ice velocipede; Myron B. Gibson, Ukiah, Cal.; filed Dec. 7, 1891; serial No. 414,328.

485,360. Aquatic velocipede; Johannes F. Baeyer, Hamburg, Germany; filed Nov. 27, 1891; serial No. 413,357; patented in Germany Sept. 21, 1890.

485,434. Bicycle saddle; Charles Stein, Meadville, Pa.; filed Dec. 2, 1891.

485,575. Bicycle support; Charles F. Bebee, Orion, assignor of one-half to Otis F. Knowles, Oxford, Mich.; filed Sept. 10, 1891; serial No. 405,252.

485,583. Bicycle; Owen R. Kenney and Frank D. Cable, Toledo, Ohio, assignors to the Toledo Bicycle Company, same place, filed Sept. 1, 1891; serial No. 405,612.

A New Factory for Bay City.

The contract was let Saturday for the National Bicycle Works at Bay City, Mich., and ground was broken Monday. The building will be of brick 50x100 feet, two stories high, and will employ forty hands on the start.

The Palmer Closure Tire.

The Palmer tire has now been most thoroughly tested on the road by Ed Porter, who has ridden thirteen centuries. Thorns and other destructible matter have been found imbedded in the tire, and even worked through into the inner tube, but there was no leakage. Mr. Palmer was in Chicago a few days last week, and took pleasure in showing to curious ones his tire. After a year's experimenting he is satisfied he has builded well, and now counts confidently on reaping a harvest of orders. The tires are light, resilient and strong. In no vital respect is it like any tire on the market. It is Mr. Palmer's intention to sail for Europe at an early date, that he may introduce the tire there. His own tire has been punctured three hundred times and has never needed another inflation. This tire was the first, and there have been many improvements since. The tube is wrapped diagonally both ways by a strong thread and then covered with a rubber solution. The original tube is made round, thicker on one side than the other, and turned inside out, therein lying the secret of self-closure. The racing tire weighs three and one-half and the road tire six pounds, and the list will be \$24.50 to \$26 a set. To the uninitiated the tire would feel too soft, but when the weight is thrown on the wheel the tire is firm yet resilient. The Columbia Rubber Company, selling agent for the Goodrich Rubber Company, now has samples and is pushing the tire on the market.

New Agents for the Rover.

J. K. Starley left Chicago last week and sailed for England Wednesday. Mr. Starley before leaving withdrew the agency of the Rover and will hereafter name more than one agency. The cause of the withdrawal from the Humber-Rover Company was the fact that both being high grade English wheels, there was a certain amount of clashing of interests, and it was deemed advisable by

all parties to make a change. There are now upwards of three hundred Rovers in the customs, which will be sold to the trade just as soon as a salesman can be sent over from Coventry. The Rover is a well-known wheel and one enjoying the confidence of the public. Overstocking has been the cause of the large surplus now in the warehouse. The wheels are of the very latest pattern and with rims to suit any tire. Mr. Starley has placed his announcement in this week's REFEREE, and we trust he will be successful in placing good agencies.

Featherstone's '93 Line.

A. Featherstone's new factory is now about completed and work on wheels for next season has commenced. Sixteen thousand medium grade wheels will be manufactured. These are the Duke, 30-inch, \$100; Duchess, 28-inch, \$100; Prince, 26-inch, \$70; Princess, 26-inch, \$70; and 24-inch and 22-inch child's safeties, all in pneumatics or cushions except the latter. The Road King and Road Queen will be of the same model as this year, but reduced in weight to thirty-five pounds or under. Five large firms will handle the output, Kingman & Company, Peck & Snyder, McIntosh-Huntington Company, Wright & Ditson and James W. Grove, Pittsburg. In regard to the tire question, Mr. Featherstone is non-committal. One suit has

years' experience as mechanic, machinist, builder and repairer of wheels. He is a member of the Buffalo A. C., also an honorary member of the Press C. C., and it has been under the colors of these clubs that most of his records have been made. His partner, Charles Haterer, brings into the business an experience equal to that of himself, and combined judgment and knowledge should produce good results. Mr. Harberer is a well-known road rider of the Ramblers B. C., and has many friends, in fact they both have, and the new concern ought to flourish. They are located at 114 Clinton street, Buffalo, and although but three months in actual business, have a well equipped shop. They intend making repairing a specialty.

New Mails, Belsizes and Irwells.

William Read of Boston is in Chicago this week conferring with Albert W. Moore, who will handle New Mails in the west this season. Mr. Moore has opened an office in the Masonic Temple, but will be found in the saddle for some time to come. The New Mail line this season will consist of a gentlemen's wheel, thirty-inch front and twenty-eight inch rear wheels, weighing thirty-five pounds all on, and a ladies' wheel of like weight. In addition to these, Mr. Moore has the Belsize and Irwells for the northwest. This line includes a

THE HILL COMPANY'S NEW WHEEL.

been won, and his attorneys in the east are now at work on this matter. Mr. Featherstone has yet to lose a suit in court, and says that people will soon receive a surprise on the tire question.

The Globe of Buffalo.

This wheel is made in three weights, twenty-three, twenty-eight and thirty-two pounds, with solid thirty-inch rims on the thirty-two pounders and twenty-eight inch on the twenty-eight pound. The racers are fitted with hollow rims. The frame is an improved diamond, beautifully finished. The adjustments are something new and quite unique, especially that of the rear hub, which is fitted with a design peculiarly that of Mr. Penseyres, and gives that part of the wheel increased strength without augmenting its weight. There are several other minor details of special construction, which will make the machine very desirable. The line and angles are very graceful and the workmanship is excellent, so that, altogether, the Globe presents a very fine appearance, and is really a beautiful wheel. Mr. Penseyres is well known in the wheeling fraternity from the many records he has made on the road and track on the single wheel, and with his mate, C. W. Dorntge, upon the tandem. He has had almost seven

thirty-four pound wheel, all on, with a double fork crown, stripping to thirty pounds, and a racer to weigh twenty-six pounds.

Will Make Swifts Here Soon.

The Coventry Machinists' Company declares it will turn out some work at its factory in Richmond, Ind., by Feb. 1. The Holbein for '93 will be altered to the model of the racer which has been on exhibition this fall. The Coventry company's experience is that the highest grade it can produce will ever be the best seller. The great popularity of the Holbein Swift is evinced by the great number seen on the streets of almost any place. William E. Sullivan of Roodhouse, Ill., writes the Coventry Machinists' Company a letter praising the superior qualities of the Holbein, and said it was with surprise he learned its great durability on the roughest of country roads.

A New Two-Speed-Gear for Wheels.

The Decker is the name of a wheel to be made at Beloit, Wis., by the Berlin Machine Works, a company that is very strong financially. Thomas O. Decker the inventor of the two-speed gear attachment, will be the superintendent, and says samples for 1893 will be in the

AGENTS WANTED...

...APPLY AT ONCE.

Sole Importers For the East.

HOWARD A. SMITH & CO.,

NEWARK, N. J.

JOHN HOYLE, 5 and 7 East Madison Street, Chicago, Chicago and Western Agent.

J. MALPAS, 58 Sheriff Street, Cleveland, Agent for Ohio.

market in a few days, and that by February prompt deliveries will be made. Mr. Decker was granted a patent for his two-speed gear attachment a year ago this month. Figure 1 shows a sectional elevation of the frame and driving gear,

figure 2 a section thereof on the line 2 2, the parts below the plain of the section being shown, and figure 3 is a vertical section on the line 3 3, showing the parts on a larger scale. The working of the double gear is quite simple. Connected to the central portion (c) of the shaft (C) by a spline and groove so as to be capable of endwise movement, but incapable of rotary movement relatively thereto, is the sliding member (I) of a double clutch, having upon its opposite ends clutch teeth that are adapted to engage similar teeth on the other two members (J' J), respectively, which are mounted to turn loosely on the parts c c' of the shaft. Prefer-

ably the parts c c' of the shaft are of less diameter than the part c, forming a shoulder, and the members (J and J') are counter-bored for the reception of anti-friction balls (K and L L'), the

latter being held in place by screw collars (M M') and jam-nuts (N N'). Rigid with the members (J J') are sprocket-wheel (O O') over which run sprocket-chains (P P'), which chains also run over sprocket wheels (Q Q') on the driving-axle (B). One set of these sprocket-wheels (preferably Q Q') are of different diameters, so that a single revolution of the crank-shaft (C) will produce a greater or less number of revolutions of the driving-axle (B), accordingly as the movable member (I) of the clutch is in gear with the one or the other of the loose members of the clutch. The sliding member of the clutch is operated and controlled by means of the following mechanism: R is a metallic strap or ring fitting in a circumferential groove in the member (I), and r anti-friction balls in-

terposed between them for reducing the friction. S is a bell-crank lever fulcrumed to a plate (I) supported by the bars (F F'), said lever having one of its ends loosely connected to the strap (R). U is a hand-lever fulcrumed to the bar (D) or to a plate secured to it, or to some other part of the frame or a connection thereof, and (V) a rod connecting one end of said lever to the free end of the bell-crank lever. When the hand-lever is at one extremity of its permitted movement, the member (I) is in gear with one of the loose members. When it is at the other extremity, it is in gear

with the other of said loose members; and when it is in a position midway between these two extremes it is not in gear with either of them, a rack (W) with three notches being provided for holding the hand-lever in either of these positions. With this arrangement the machine may be geared without dismounting, for power or for speed, or it may be thrown out of gear and the pedals used for foot-rests while coasting.

The Ladies' Triumph.

We show herewith a picture of the ladies' Triumph, reference to which was made in last week's issue, but by an

oversight the cut was left out. A glance will show it to be one of the neatest ladies' wheels yet put on the market.

Mr. Bettman, the managing director of the Triumph Cycle Company, was in Chicago this week. He has placed agencies in most of the big cities and has done so well that he is well satisfied.

New Ideas in Pneumatics.

Thomas Fane and Charles F. Saunders of Toronto have been granted a patent on a tire which ought to prove a success. In figure 1, a cross section of the tire is shown, with a fabric material (1) between two sections of rubber (2 2), thus forming the outer cover. The fabric (1) extends beyond the edges of the rubber (2) and has formed along each edge a loop (3), through which passes an end-

less wire (3 a), much on the order of the Airtite, or 1893 Dunlop. Figure 2 shows how the tire is held in place. The air-tube (4) rests on an annular plate (5) located in the rim, beneath which extends the wired edges (3 a) so that when the plate (5) is drawn down tight the

tire is held firmly against the rim (6) and somewhat below the edges (7) of the rim. In figure 3 is shown the method of joining the ends of the plate (5). On one end of the under side of this plate a lug (8) is cast, with a hole (9) through the same; at or near the other end is another lug (10) and hole (11) through it. To the lug (8) is fitted a teat (12), which projects through an opening formed in the other side of the rim (6)

for the purpose of firmly holding said lug in position. On the under side of the rim (6) and on the side of the lug 8, opposite to the lug 10 is a lug fitted with an aperture through which passes the bolt (14) fitted with a light-running

nut (15), said bolt having a large head, which butts against the face of the lug 10. By screwing the nut (15) on the bolt (10) the ends of the plate (5) are quickly and securely brought into position.

The tire of Louis K. McClymonds, of Cleveland, comes as near to being the counterpart of the Airtite or 1893 Dunlop as it could, though the rim (A) is of a

different shape. The edges (b 4) of the tire (B) are enlarged so that when the tire is forced in the grooves (a 1 a 1) of the rim by the annular ribs (b 2 b 2) on the inner tube when inflated, the tire is held firmly in place.

[The New Psycho—A Wonder.

A. A. Taylor, manager of the Taylor Cycle Company, returned from a seven weeks' trip to England last week, and brought with him a contract which gives him the sole United States agency (except the New England States) for the Psycho, a wheel so well and favorably known that little need be said of it. Mr. Taylor also brought with him a sample of the '93 Psycho, actual weight thirty-two pounds. With this wheel, the Tourist and the Liberty, the company will bid for trade stronger than ever, and travelers will start on the road with samples in about five weeks. Little has been heard of the Taylor company this season, but nevertheless the retail trade has been good, and considering the lateness in receiving Psychos and Tourists, the wholesale department has enjoyed a good trade. The coming season will see a change, and the Taylor company will push its wheels into every part of the western states. The Bidwell Cycle Company is the eastern agent for the Psycho. In the new wheel the frame is in two parts only, as if stamped from a solid sheet of steel. What the process of manufacturing is no man has guessed. That the frame, which is one piece all around, including crank hangers, is stamped out is proven by the little ridges along the center and in the corners, such as are left on all drop forgings. The head, crown and forks are also one piece. The frame is of tool steel and cannot be cut by a file, numerous customers having attempted the feat. The only explanation that a practical builder who examined it could give was that the entire frame was stamped out of sheet steel, and the two halves then joined together by machinery of some sort, which seems very improbable. No brazings or ridges at the intersections of the frames are shown.

Trade In and About Boston.

Boston, from a trade standpoint, is not lively; in fact there is scarcely a ripple of actual business on the surface of the trade pond, but there is much commotion (in getting ready) beneath the surface. The Union Cycle Manufacturing Company's wide-awake treasurer, Walter Measure, chuckled with delight over next season's prospects, and notwithstanding some pumping the name of next year's wheel could not be secured. "It is going to take; it will beat 2:10," said Mr. Measure.

Kirk Brown looks happy, and says the Airtite tire is making many friends and converts. Some good contracts have

been closed already. E. J. Howell was showing a party, including the REFEREE man, how quickly he could "flate" and deflate an Airtite last Tuesday, when an alarm of fire rang through the hotel, which made Howell break record in packing his grip, and the tire was forgotten for the time. "Our tire is also fire-proof," said E. J., as he made his way to the escape with the rim and tire over his shoulder.

They say that Major Atwell owns an interest in a Bromfield street auction house, where a large sale of wheels has been going on recently. Several Boston firms have resorted to the auction room to clear off old stock, and soome good prices have been realized.

William Read & Sons are busy getting next season's New Mail in shape. Senator John Read was, as usual, very busy—so was the president of the Easy Club, Major Atwell.

Manager Harvey, of the John P. Lovell Arms Company, said that next season's Lovell would surprise all, and the Fitchburg works have commenced on same, which will be described in the REFEREE'S Christmas issue. Mr. Harvey has made a complete success of the cycle part of this popular Boston sporting goods firm.

BROOKES CYCLES SUCCESSFUL.

George A. Drysdale, the American agent for the famous Brooks bicycles,

and most popular among the trade. Of course this firm makes a leader of the Phoenix. Mr. Sabin is a heavy real estate holder, his ventures in Tacoma, Wash., two years ago having turned out splendidly.

Underwood, of Quadrant fame, still holds the belt for a pretty store, and his wheels are as pretty as his store.

Overman, near the "bridge of size," is the same calm, self-contained, energetic business hustler, and the merry click of the typewriters proves there is business on hand.

Schaff, of the G. & J. company, was seen riding Connelly's Broncho-g geared ordinary. Pete Berlo is making one "just like Connelly's, but much lighter." This wheel is made up of a combination of safety and ordinary, with the old Broncho gearing. Whittaker thought great speed could be got out of it. Connelly's wheel has thirty-six-inch front and twenty-six-inch rear wheel.

Harvey, late of Hatch & Harvey, will shortly place on the market a valve for pneumatics, which he says will be the thing in valves for '93. He can be found at the Coventry Machinists' Company's place, or at the Revere Rubber Company, Franklin street. Speaking of the Revere Rubber Company, Whittaker, the manager of the tire department says his firm is making three tires for different firms, and does business with nearly

LADY'S PSYCHO.

176-178 Portland street, is much pleased with the success of the wheel in America, considering the short time it has been here. Among the ardent admirers of the Brookes is George F. Taylor, the well-known racing man, who is using a light roadster on the road. This wheel recently made a clean sweep in some local races, and several of the Boston cracks will ride the Brookes racer next year. Another feature of Mr. Drysdale's business is brass bedsteads, for which he is sole American Agent. They are also made by Brookes.

Codman & Shurtleff, the air-pump manufacturers, 13 and 15 Tremont street, are doing a good business with their registering inflater, air-pumps and nipples.

M. H. Dounes, of 7 Bosworth street, will shortly place a popular-priced cyclometer on the market, which will retail at \$4 This cyclometer, Mr. Dounes says, will be strictly reliable, and as he is one of the leading makers of intricate watch and clock work, the cyclometer should be reliable. The well-known Stillman G. Whittaker may be interested in the cyclometer in a selling way,

Alex. Hill, manager of the Coventry Machinists' Company's Boston house, is happy over the clearing out of a lot of ancient (but honorable) goods which had accumulated during the past three years.

Sidwell & Sabin are two genial people

every bicycle manufacturer in pedal rubber, etc. A new tire will be ready about Dec. 10.

A. O. Very, on the avenue, is doing a very nice business; so is Singer & Company and W. W. Stall, who will do quite a bit in the manufacturing way from now on.

THE POPE COMPANY BUSY.

The Pope Manufacturing Company seems to be as busy as ever, and a talk with Secretary Pattison and Treasurer E. W. Pope confirmed the REFEREE's reference to that dispute about the ladies' wheel and dimension required between saddle-post and handlebar. The meeting actually took place at Hartford, when Elliott Mason was on hand with his charts and won the day. "Nothing like actual experience," was the defeated Pattison's comment. Advertising Manager Cole of the Pope Manufacturing Company don't seem to take life over-serious, and the continual stream of advertising propositions don't seem to affect his health. A deep, clever young man is Cole, and if report is true he may leave the company next spring. Colonel Pope's good roads secretary has imbued this youthful enthusiasm of the head of good roads agitation. He swooped down on the REFEREE with facts and figures galore to prove what tremendous strides this most valuable of all schemes, launched by the ever-fertile brain of

Albert A. Pope, had been made. Col. Rice slightly kicks at the actions of the editor of *Good Roads* swiping an article out of the "Memorial to Congress" and running it in the last *Good Roads* as original editorial matter.

The Raymond Skate Company at Charleston, a Boston suburb, will build a high grade bicycle of latest pattern with several new devices. For instance, the saddle post will be used as an inflater, and the saddle will be the pump handle. A piece of rubber tube with screw will be fastened to the valve, and by just loosening the saddle you can pump away. For the convenience of woman riders the idea was at first suggested.

Good Business in Providence.

There is not much new in Providence trade circles. Whitten & Godding have been busy taking stock and are much pleased with the past season's trade, which was the banner one so far with this pushing house. Trade in parts and sundries is large. The Saladee saddle is selling well, and everything points to 1893 being a good year, Mr. Whitten said.

Rankin & Bruce are doing a nice business in the sundry line, and Monroe's anti-squeak compound for chains is having a good sale. This firm recently built a four-wheeler with wire wheels and pneumatic tires for C. J. Hamlin, which the Buffalo horse-breeding millionaire used in his team record-breaking recently. Messrs. Bruce and Monroe now drive around Providence behind a pair, in a pneumatic four-wheeler. They are now building a cushion-tired hickory four-wheeler, which they believe will beat the wired wheel. The cushions used will be one-and-a-half-inch, fitted to steel rims, bolted through the hickory felloes.

Belcher & Loomis will probably confine their efforts to pushing the Union wheels next season. C. G. Monroe, the manager of the cycle department, says it is wonderful how sales keep up, and hints that the firm might drop the jobbing sundry business altogether and confine itself to the retail trade.

Campbell & Company are still pushing things and report trade as fair. An exhibit in their window always attracts attention from pedestrians.

THE TILLINGHAST TIRE COMPANY.

George C. Voss, president of the Tillinghast Tire Company, always an interesting talker, divides his time between the factory and the company's office. "We are ready," he said, "with our '93 tire, and our factory is now in ship shape order to turn out tires by the thousand. Mr. Voss touched on a subject which might be of interest to tire and bicycle manufacturers alike—the ordering of tires. Said Mr. Voss: "Bicycle firms order their tires say in December, and say, 'We will let you know how to ship them later on.' Later on means the very last moment, and then comes a telegram to hurry off thousands of tires, and they all come about the same time. Now what show does that give the tire man or the bicycle maker?" "Why not make up your stock in advance?" suggested the REFEREE man. "Do you know the capital it would require to have say 20,000 tires lying idle, and do you know the insurance risk such a proceeding would demand? Well, I can tell you it would be heavy. The burden should be borne equally, and not all by the tire man. The delay in filling orders counts, besides. If a merchant orders a bill of cotton or woolen goods from a manufacturer, say in July, the manufacturer commences shipping at once, and when the season is ready the merchant is ready for his customers and the manufacturer has his cash. It is possible the reluctance to receive goods early by the bicycle

ATTENTION, ROAD RIDERS!

PRIZES FOR THE SEASON OF 1892.

ENTRIES CLOSE CHRISTMAS DAY.

As we have given many **PRIZES** for track and road races during the past season, it seems only fair now that Christmas is approaching to offer something for the hard-pounded road riders. If this experiment succeeds we will make a desirable list for 1893, which will be announced later on.

FIRST PRIZE, \$25.00 To rider who has ridden the greatest distance on M. & W. Tires without change of tires or any important repairs.

SECOND PRIZE, \$15.00 To rider making greatest number of Centuries on one set M. & W. Tires.

THIRD PRIZE, \$15.00 To rider making most meritorious single ride, weather, condition of road and distance considered.

FOURTH PRIZE, 1 Set Road Tires To each second and third best in above.

JUDGES: N. H. Van Sicklen, C. P. Root, L. J. Berger.

CHEQUES FOR CASH PRIZES WILL BE MADE TO ORDER OF N. H. VAN SICKLEN TO BE EXPENDED IN ANY WAY THE WINNER MAY CHOOSE.

WE ARE TO HAVE THE PRIVILEGE OF PUBLISHING THE RECORDS UNLESS RIDER STIPULATES TO CONTRARY. . . .

FILL OUT CAREFULLY AND MAIL TO US.

MORGAN & WRIGHT, CHICAGO.

manufacturer may be from the uncertainty of pattern, and possibly radical change in construction. In the dry goods line that uncertainty does not exist. Still, the subject is worthy of consideration, and would give both sides a better show." Mr. Tillinghast was away on the road with the '93 tire.

Trade in Worcester, Mass.

What a magnificent building, you say, as you look at the new four-story Reed & Curtis building on Globe street, Worcester, which is now nearing completion, so near that the Reed & Curtis employees gave a dedication on the second floor Oct. 28. The front page of the programme had the building, with a Curtis pedal, as frontispiece: "Dedication Social of the Reed & Curtis Machine Screw Company, Gold Street Building, Friday Evening, Oct. 28, 1892." The floor space, 200x45 feet, was filled with a gay throng. Mr. Curtis was found and showed the way through the new building. His talk on pedals and screws was mingled with some little stories, for which Curtis is famous. The building is of stone and brick and heavily timbered to carry the heavy machinery for screw and pedal making. The basement will be used for the engine room, case-hardening ovens and polishing machinery. The second floor will be devoted to screw-making machinery, offices, toilet rooms and packing room. The third floor is for pedal-making machinery and a draughtsman's room, while the top floor will be used for stores and supplies. An improved elevator will connect the different floors, while a large stable and barn alongside the building will accommodate horses, wagons, etc. For a man who went to Worcester only five years ago, Mr. Curtis has done well, as his principal capital was energy and thorough mechanical knowledge of the business he started. Mr. Reed, a respected and wealthy Worcester manufacturer, offered to put more money into the business two years ago, and to-day the firm owns its own splendid factory, the ground it stands on and a good bank account.

J. C. Wakefield of Worcester is famous through wrench making for gas fitters, and proposes to become equally so among the bicycle trade. For the past four months he has been experimenting with a wrench which he has just sent among the trade as a sample. If the trade approves of it Wakefield will make 50,000 as a first installment.

LEATHER GOODS FOR THE TRADE.

The J. J. Warren Company of Worcester is about the leader in the bicycle leather goods business, and its leathers are used by the leading saddle makers, while its tool bags, pneumatic pump holders and other novelties are sold by the thousands. The Warren company can make any novelty desired by the trade, and its large, handsome store building, near the depot, is a hive of industry. Secretary Walter F. Davison on two occasions recently has shown the writer through the factory, and the place is a source of much interest, as everything in fine leather toilet goods, and in fact almost everything required by travelers, is made by the company. Mr. Davison worked his way up from the ranks to his present position, and enjoys the confidence of his partners and employees.

L. N. Alexander, the cycle agent of Main street, markets the cyclist's waterproof cape and reports a good sale for this rainy weather necessity, which is the invention of a telephone lineman of Worcester.

Dr. Wood, who is well known locally as a prolific inventor of things apper-

taining to cycling, still keeps up the game. Hygiene saddles, something novel in a frame, and other things, are the doctor's. Scarlet fever and the stomach ache (Worcester is prohibition) has caused the doctor to lay aside things cyclic of late, but with cold weather he will be at it again. I called twice on the doctor but could not catch the inventive man of physic.

Lemont & Whittemore are still holding out above the postoffice, and still sell bicycles and locks. Mr. Whittemore said that the trade had been good, and Mr. Lemont stated that the Bay City Wheelmen would do business at the old stand in a tournament next May.

The Mathews Manufacturing Company is making some sundries, besides coasters and supplies. J. C. Spears, always glad to see a newspaper man, was seated in his office, while the merry rattle of steam hammers told that drop forging was in full blast in his works. Across the way his bicycle factory was busily making the Majestic, for which Hurlbert Brothers & Company of New York are sole agents.

Springfield, Chicopee and Holyoke.

The smiling A. Kennedy Child, with tall hat, crysanthemum in button-hole and a gay and prosperous look generally, was telling H. C. Martin of Buffalo that a thousand Warwicks would be required about Buffalo next season. "Well, as I have contracted to sell several thousand of other makes, possibly I can sell a thousand of yours," said Mr. Martin. A. Kennedy said the coming year would be the greatest the Warwick company ever had, and that there was positively no truth in the story that he had promised to assume the management of a local cycle factory. He says the big Warwick works demanded his entire time and attention, and that New England people are slow to appreciate a first-class joke.

The Keating Cycle Company is busy at Holyoke getting ready for next season. The popular Jim Murphy took the REFEREE man in tow pending the arrival of Manager Keating, and showed him the beauties of the city where Springfield boys go to dance. Manager Keating said: "We will have a good wheel next year, and orders now in show that we will have to work night and day before spring is here."

BUSY AT CHICOPEE FALLS.

The Overman works at Chicopee are spreading out dangerously close to that grave yard. The new wing and tire factory is now completed. It looks, though, as if Overman will yet make Victors over the dead. Morgan and Andy McGarrett took me in tow, and after discussing cycling discussed other things. Morgan is superintendent of the Overman agencies, is only twenty-two, but very speedy in business. A. H. Overman and Advertising Artist Powell were away. The boys say that Colonel Pope was seen to drive around the Chicopee Falls factory last week, and entirely approved of all he saw, but did not stay to lunch.

In Hartford the lights played merrily in the Columbia factory, while rain pelted the pedestrians outside. D. J. Post, of the Hartford Cycle Company, was working hard. He said last season was a "corker" in every respect, and the next would surpass it by a long majority. The fact is, the Hartford Cycle Company had to call its men off the road last season during the lack of supply.

The Columbia works were busy and all local trade seemed good. A. M. Stillman of upright-oil-can-holder fame, is pleased with the cordial reception that his can-holder has received from the trade.

H. J. Curtis, the home-trainer maker, says inquiries for his machines are getting brisk from the clubs and cracks for winter practice.

A new firm, the League Cycle Company, was organized in Hartford last Thursday, and will occupy the old Cycle Works factory. The company has a paid-up capital of \$100,000.

MORGAN.

The Trade in Chicago.

E. H. Wilcox, of Freeport, visited the Chicago trade last week.

A James safety is to be raffled by the Englewood Cycling Club Dec. 3.

Tom Roe is located in New York. He represents the Ariel Cycle Company.

An Imperial pneumatic will be raffled by the Lake View Cycling Club Thanksgiving night.

J. H. Cassidy, of Thorsen & Cassidy, is in Iowa with a line of Western Wheel Works goods.

William Herrick was in Milwaukee several days last week in the Stokes company's interest.

W. C. Anderson has entered the employ of A. G. Spalding & Brothers. He worked for the Taylor Cycle Company a half-day.

E. Bryan, a colored man, is doing an excellent business in metal polish among the cycle dealers. He calls his product Imperial metal polish.

"Go away, boys. I'm up to my ears in work and can't talk to you for two days," said A. Featherstone in his cozy little office at Sixteenth and Clark streets.

H. T. Hearsey, the progressive Indianapolis cycle dealer, was in Chicago last week to confer with the Western Wheel Works people, a part of whose output he will handle.

There is a patent pending for a positive repair for what are termed hose-pipe tires. This repairs positively and quickly, and removes the main objection to that class of tires.

T. D. Ganse returned to Chicago from Michigan last week. For the past month Mr. Ganse has been in constant attendance on his wife, who lies sick in a Michigan farm house.

Fred Patee was in Chicago late last week. He would neither deny nor affirm the report that he would shortly locate in Chicago and smiled knowingly when asked. It seems reasonably certain to say that he will.

Secretary-Treasurer Wilmarth, of the Grand Rapids Cycle Company, is in the city this week. The Clippers for '93 will be greatly improved. The ladies' wheel is to be a straight frame, double fork crown and weigh but thirty-four pounds.

John Palmer departed for Akron, O., last Thursday, to keep his eye on the building of the first lot of his non-puncturable tire. John has this tire covered with patents in all foreign countries, and expects to cross the water soon to introduce it.

We should think that if the Anglo-American company would open up a depot in Chicago a large trade could be done, and it would suit the company's numerous customers. Perhaps the company intends doing this, and that may be the reason Mr. Sanders is coming west this week.

The Derby Cycle Company is extending its works considerably, adding new machinery and a plating and japanning plant. The shops have been enlarged from 25x150 to 100x150. Fifteen hundred wheels are expected to be made for the season of '93, and Mr. Garfield, who is now in the east with samples, is meet-

ing with splendid success, his first large order coming from Buffalo.

The Columbia Rubber Company of Chicago is selling agent for the Goodrich Rubber Company of Akron, O. The Columbia Rubber Company is now showing to the Chicago trade samples of the Palmer self-healing tire, which seems to be all that is claimed for it, resilient, self-healing and of light weight.

Since the announcement in the REFEREE was made that Mr. Hoyle had secured the contract of the Excelsior for this and the adjoining states, he has had scores of letters asking for agencies. Mr. Hoyle assures us that he will have a large sale for these wheels. Samples are on the way from England at this writing.

The Ganse Cycle Company has closed its Wabash avenue store, the lease having been purchased by the Ariel company, and hereafter all business will be transacted at the wholesale store, 508 State street. The company will next year push the Reform with more confidence than ever, from the knowledge that in past seasons the wheel has given every satisfaction.

On the 15th of this month the Ariel Cycle Manufacturing Company, will be at 277 Wabash avenue, corner of Van Buren street. C. H. Plumb has been installed as manager. The Ariel, a light roadster weighing thirty pounds, and the ladies' Titiana, weighing thirty-three pounds, will be pushed by this company in Chicago, as well as a line of boys' wheels and the geared ordinary.

Mr. Matlock, of the Simonds Hardware Company, St. Louis, was in Chicago last week. His firm will make the cycling line a most prominent department of its business next season. It employs 128 traveling men, and all will represent the bicycle department. This department will have unlimited capital. The Simonds Hardware Company has thirteen clerks in its sporting goods department alone.

General Trade Notes.

The Psycho for '93 will include a front driving safety and five other patterns.

The Marble racers for '93 will have rims of vari-colored tints, which will be very distinctive.

Joseph Ryan is in full charge of Hibbard, Spencer, Bartlett & Company's bicycle department.

W. C. Rands, the Detroit racing man, has fitted up a buggy with pneumatic-tired bicycle wheels.

J. Malpas, 58 Sheriff street, Cleveland, O., has secured the state of Ohio for the Excelsior through Mr. Hadden.

The Taylor Cycle Company, Chicago, will handle Liberties for the western states in '93, and is now appointing agents.

E. H. Wilcox has been made vice-president of the Stover Company and will give the best share of his time to superintending agencies.

J. K. Starley's new Giant safety will soon make its appearance in Chicago and will be handled by the Taylor Cycle Company. This wheel was patented twenty years ago.

Hal Greenwood, the hill climber, starts on the road this week for Kingman & Company, Peoria. He will sell King and Queen of Scorchers and the Road King and Queen.

William L. Ross, of Boston, sails for England Wednesday for a visit to the Singer works at Coventry. He will arrange for early shipments of the new Singer goods, so as to be ready for the early 1893 trade, and upon his return will be posted upon the new features

24 Cash Prizes.

We desire to thoroughly introduce our Sunol Bicycles throughout the United States in 1893, and in order to give them such an introduction, we realize that we must advertise liberally and well. We are willing to advertise liberally, but that it may be done well, we must have a supply of bright original advertisements. We therefore make the following offer for the best 24 advertising ideas, first prize to be awarded to the author of the best, second prize to the author of the second best, etc.; decision to be made by three competent judges:

1st Prize, \$200. 2nd Prize, \$100. 3rd Prize, \$50.

4th Prize, \$25. 5th to 24th Prize, \$10.

We will also pay \$5.00 for each idea not securing a prize that we think we can make use of. Contest closes January 15th, 1893. For particulars as to the nature of advertisements required, etc., address—

The McIntosh-Huntington Co.,

Adv. Dep't.

Cleveland, Ohio.

"Make Haste Slowly"

Is an old but good proverb, especially for Bicycle Manufacturers and Jobbers to follow, who are about to place their orders for Saddles for next season.

YOU WANT TO SEE OUR '93 PATTERNS BEFORE YOU BUY.

They are just as good, just as practical, and just as sensible as our celebrated Baby Seat. We will show them to you very soon. WAIT.

which Singer & Company have to offer next year.

Next year's pattern Swift will have have slightly greater rake on the front forks, just the one thing needful to make these famous machines perfect on all conditions of grease and gradient—*Bicycling News*.

Although only lately consummated, the deal that Howard A. Smith & Company, of Newark, N. J., with Bayliss, Thomas & Company, of Coventry, for the sale of the Excelsior cycles for the entire east, is generally known throughout the trade.

which, fitted with pneumatic tires, will weigh, all on, thirty-four pounds.

President Llewellyn Johnson of the Premier Cycle Company sailed Wednesday on the City of New York. He will visit the Stanley show and obtain all the desirable novelties for the American trade. The 1893 Premier roadster has one and three-quarter pneumatics, mud guards, chain case and brake, and weighs, all on, thirty pounds.

H. S. Fulper, the hustling state representative of the New Jersey division, is traveling in the interest of the Ideal

on a roadster pneumatic safety, and although the roads were very bad in places it required no attention whatever from start to finish."

George Seymour, a trusted and valued employe of the Coventry Machinists' Company, who is in charge of the Boston repair shop, was tendered a farewell supper by his friends at the "Hare and Squirrel," Coventry, on his departure for America recently, after having enjoyed a vacation tendered him through the thoughtfulness of Manager Grenier. Mr. Seymour thinks his company and

other day. Troy's name was mentioned and the possibility of the southern trip falling flat was suggested. Said fox: "Talk about Troy not being capable of engineering a deal like this to some one else! That fellow is as smooth as the oil he is given credit for distributing so lavishly. Out in Dakota several years ago he had a printing office outfit in a big covered wagon with four mules hitched to it so that he could follow the county seat about and get a 'graft' at the legal printing. How was it? Well, you see, in territorial times the county seat question was a constant source of strife.

Snap elections were held and county seats were removed to neighboring towns frequently. This was not always accomplished without force of arms; the records were often carried away in the night by armed men. Troy started a paper in a northern county, and of course got a line on all the county printing. He had a 'pull' like a team of mules, and he once told me that he could not for the life of him see how the county raised the money to pay his bills, to say nothing of the other expenses that had to be met. Just at the time he saw his bank account grow to a figure that would permit him to run for congress, a snap election was held and the county seat was declared moved to another town. A fight followed, but a lot of fellows armed with shot guns came down upon the court house and carried away the county records. Troy's business was gone, but he pulled stakes and followed the records. Another printer, who had engineered the snap election, had the printing 'cinched.' Within a month Troy had sufficient 'pull' to get the work again. He bought a big covered wagon and four mules and had the outfit back of his print shop ready for action. One night a number of the former county seat came down on the sleeping town, captured the records and hurried away. When morning broke there was Troy, wagon, mules, print shop and devil on the main street of the re established county seat, placidly get-

PHILADELPHIA CYCLE SHOW BUILDING.

Howard A. Smith & Company are and have been among the largest bicycle sundry dealers in the United States, and with a very large following.

March safeties will be the same design for '93, but will be greatly improved in little details. The twenty-eight pound wheel, one of which Spooner rode in his twenty-four hour ride, will be named after the record-breaker.

William R. Anglemire, of Rockford, Ill., has just returned from a 2,300 mile trip a-wheel in New York, Pennsylvania and Virginia. He rode Morgan & Wright tires and did not have a puncture or accident on the entire trip.

The Goodrich Rubber Company, of Akron, Ohio, expects to manufacture 150,000 tires this season. Four kinds are manufactured by this concern, the Gormully & Jeffery, Palmer, Thread (H. A. Lozier & Company) and Greyhound.

W. H. Kirkpatrick, traveling salesman for Howard A. Smith & Company, has severed his connection with this house to accept the position as manager of the bicycle department of McKee & Harrington. In future he will be known as "Lyndhurst Kirk."

H. F. Vale & Company, of Birmingham, Eng., have been paying considerable attention to manufacturing frames for the trade. In this the firm has been very successful, and having enlarged their works are in a position to take care of American orders.

The Liberty cycle for 1893 will comprise the Liberty light roadster pneumatic, weight, all on, thirty-five pounds; the Liberty full-roadster pneumatic, all on, forty pounds; the Liberty "Bogie Man" light road racer, twenty-eight pounds, and the "Bogie Man" racer for track use, which will weigh twenty-two pounds. There will also be in the Liberty family the Goddess, which is a ladies' safety of beautiful lines, and

pneumatic tire. As the Ideal is one of the best tires on the market and Mr. Fulper is a good judge of anything pertaining to a bicycle, we believe that he will be successful in introducing the tire to the many manufacturers of this country.

Manager Grenier about right—and Coventry people ditto.

Troy and His Official Organ.

Talking about Troy, the cunning "inducer" and "distributor" of oil, who is at present railroading through a scheme by

PHILADELPHIA CYCLE SHOW BUILDING—(Interior).

The Leicester Cycle Company, of Peregrine fame, has just received an intimation from the Wanderlust Bicycle Club of Vienna to this effect: "The Wanderlust Bicycle Club of Vienna herewith confirms that Mr. J. Sabotka, a member of the club, won the Vienna to Trete road race on September 24 and 25, doing 26 hrs. 35 sec. for the 500 kilometers, and also creating several Austrian records en route. He was mounted

which a party of crack racing men are to be taken for a tour of the southern states, reminds one of a story told by Fox of the Sercombe-Bolte Manufacturing Company, which, if it be true (and there is no reason for doubting it) proves Troy to be more cunning than he is even given credit for. Fox, who has roamed all over the country doing newspaper work, following race meets, etc., was talking before a group of wheelmen the

ting out an 'extra' telling of the recapture of the records and his enterprise in being situated so that he could follow in short order. In an editorial item he said: "When ye editor loses his graft on the legal printing of this county again, it will be owing to the death of his mules or the total destruction of the prairie schooner in which his print-shop has a home."

The REFEREE is well worth the price, sn't it?

SALADEE'S PATENTED

INTERNATIONAL STANDARDS

For the UNITED STATES, CANADA, ENGLAND, FRANCE, GERMANY, BELGIUM, AUSTRIA and SWITZERLAND.

SALADEE'S Standard Road Saddle

For Ladies and Gents.

Weight, 2 lbs., 2 oz.

Saladee's Standard FOR SCORCHING SADDLES.

Weight, 1 lb., 14 oz.

The arrow points in FIG. 1 indicate the open spaces between the plates of the spring in front and rear of the clasp, and which are closed as the weight is applied to the seat, reinforcing the spring as it is depressed, and thereby affording an AUTOMATIC ADJUSTMENT, to a light or heavy rider. Never before attained in cycle saddlery.

Correspondence Solicited for next season's trade.

The Whitten-Godding Cycle Co.

PROVIDENCE, R. I.

Sole Manufacturers for the U. S.

The simplicity, style, and comfort embodied in FIG. 2, as a "Scorching" Saddle, has never yet been equalled.

In this spring, the weight of the rider is so balanced, in relation to the L-Rod, that the absolute rigidity of the old "Hard Shell" is avoided, and hence a degree of comfort is retained that all expert cycle-riders riding a "Scorching" will duly appreciate.

Recording "Referee" Reflections.

The New York Recorder, one of the most influential and widely-circulated metropolitan dailies, had this to say last Sunday on our racing board cartoon:

No better caricature was ever drawn than that published in the current issue of the Referee. It represents the late secret session of the racing board at Chicago, with the figures of the editors of the rival cycling journals in close contact outside the door. Prial, Van Sicklen and Betts are well done, the latter in his famous character, Betsy B.

Generous Racing Men!

According to a New York paper it is queer how very generous to their relatives racing men become some times. George C. Smith, the Riverside wheelman, who was charged with selling a bicycle which he won, has made a sworn statement that he gave the wheel to his brother, and that it was the latter who sold it.

The commissioners of Belle Isle, Detroit, have forbidden the holding of races on the circuit. The action of the board is probably proper, but it is a blow to the wheelmen, nevertheless. The clubs have to hold their races on the Grosse Point road.

Women bicycle riders of the land say it is easier to manage a bicycle than it is a man. The man capable of managing his own pocket-book is generally a good one to manage a woman. The women can ride bicycles, but they can't vote.—Stamford (N. Y.) Mirror.

READ THIS!

It's Right
to the
Point!

ROODHOUSE, ILL., Nov. 2, 1892.

COVENTRY MACHINISTS' CO., Chicago, Ill.

GENTLEMEN:—Your circular letter, 26th, received in due time. Have been very busy and have deferred answering until I could give it the attention it deserves. I have carefully answered the questions and hope they will be of benefit to you in your attempt to improve where you can. I, like you, find that **NO** machine of any kind is **PERFECT**, and when a maker tries to make people think so I let him alone, as it is a good time to wait until he wakes up and gets in the procession. I have been a rider since February '81, and in that time I have seen so many "perfect" machines totally relegated to the rear, that it makes me smile to hear this or that maker talk about perfection.

You know this is the first season I have handled the "SWIFT," and it has given me and my customers **SPLENDID** satisfaction. When I sold the first "Holbein" early in the season I was afraid it was too light for our roads here, and so told my customer, but as it was a "SWIFT" he was willing to risk it. It has never been to the repair shop and it was always ready for a go the whole of the season, and seems to be in perfect condition now. I am very much pleased to know that you will build them in the U. S. hereafter. I am thoroughly satisfied now that the "Holbein" with Pneumatics is heavy enough for our rough Illinois roads with an average rider's weight. Yours truly,

WM. E. SULLIVAN.

FOR CHICAGO READERS

The Thanksgiving day foot ball game between the Chicago C. C. and the Illinois Social Club has been declared off, and the cyclings are arranging again with the Englewood C. C.

The daily press has given scant notice to Dead-Broke Wylie; in fact, the nearer he approached Chicago the scarier the notices. This only goes to prove that the public stands ready to applaud meritorious performances, but such as Wylie's performances, never.

The Minnette Cycling Corps will bid lively for honors on the racing path next season with a team which will be under the training of John West this

R. S. BAIRD,
President Comet Cycle Club, Milwaukee.

winter. The best men of the club are: H. N. Stringer, J. B. Woolas, F. B. Whitlock, J. E. Hudson, F. D. McGuire, C. E. Griffiths and possibly A. F. Harner.

One of Chicago's oldest riders remarked to the writer some days ago: "Mark my words, the time is coming when Chicago will be the home of all the fastest men in the world. Her men are climbing fast. Chicago is the greatest city in the world and is determined to be the very center of cycloedom and cycle racing."

Rockford is to be in the western circuit next season, with a two or three days' meet. The Rockford Cycling Club in meeting assembled agreed, one and all, to take hold and make the best tournament of the circuit and one superior even to the tournament given on the occasion of the Illinois division meet some years ago, when several world's records were broken.

Six of Chicago's cycling clubs are now in homes of their own, either built for or owned by them, and two more—the Chicago Cycling Club and the Cook County Wheelmen—will be by next season. The Illinois Cycling Club's house is at 1068 Washington boulevard, Oak Park Club at Oak Park, Aeolus Cycling Club at 177 Evergreen avenue, Columbia Wheelmen at 311 West Division street, Englewood Club on Sixty-fifth street near Wentworth avenue, and Ravenswood Club at West Ravenswood Park and Wilson avenue. The Farragut, Ashland, Carleton and Arlington social clubs all have large cycling divisions nicely provided for in their elegant homes.

The Century Road Club Organized.

Last Thursday evening the Century Road Club of America held its second

meeting at the Grand Pacific hotel, a score of the prominent members being present. The constitution and by-laws were accepted as read. A mail vote was authorized for officers. W. A. Skinkle of Cleveland, ex-president of the Chicago Cycling and Cleveland Wheel clubs, will undoubtedly receive the unanimous vote for president, and William Herrick will be made chief centurion—a life position. There are to be elected, besides the above, two vice-presidents, secretary, treasurer and a state centurion from every state of more than ten members. The government of the body is to be in the hands of a national board consisting of the officers, national and state. The place and time of the annual meeting will be the same as chosen by the L. A. W. The club in its government will be very similar to the L. A. W., the same rules applying as regards professionals, acceptance of members and expulsion of members who shall have been expelled from an L. A. W. club. The secretary will be the only salaried official. The mail ballot will also decide the official organ of the organization, which will publish the names and addresses of all applicants, "that no dogs may enter the fold unawares." The official organ will not be supplied free, but at half the regular subscription rates. The initiative fee remains the same, \$5, including the badge and the first bar. The club year begins April 30, and is divided in two parts, May 1 to Nov. 1 being the first half, in which the applicant pays the full dues, and during April no dues until the starting of the year. The membership cards denote membership and not necessarily the badge. The objects of the club are to promote good fellowship among road riders and to act as a repository for road records. Such records claimed for stated distances must be over accurately surveyed and certified distances and records between important points from specified point to specified point, timed by two competent officials. State centurions will be authorized to issue orders for bars for centuries ridden. The club now numbers over 1,000 members and the treasury is in a most flourishing condition.

General Race Gossip.

The San Jose, Cal., wheelmen will have a road race Thanksgiving day.

The Acme B. C., of Oakland, Cal., holds a twenty-five mile road race Sunday.

The Capital City C. C., of Lincoln, Neb., holds a ten-mile road race this week Friday at 4 o'clock.

A number of Erie men are in trouble for having participated in some unsanctioned races on Columbus day.

The Metropolitan Association of Cycling Clubs of New York has decided to hold a big race meet next June, at Manhattan Field.

W. C. Rands recently lowered the record from Detroit to Mt. Clemens, twenty miles, covering the distance in 1 hr. 8 min. Schimmel held the record previously, 1 hr. 38 min.

A colored lad in Youngstown, Ohio, has been showing his white friends that there is talent in the negro. From Hubbard to Youngstown is six and a half miles, and Phelps (colored) made the distance in 25 min. 28 1/2 sec., while the next best man was three minutes slower.

The Rockford Cycling Club has decided to enter the western circuit next year, and will give as large a tournament as any organization in the west. The Rockford track has already won a good reputation and is quite widely known among the fraternity, three world's records having been broken at the last meeting.

The St. Louis wheelmen will enjoy a paper chase Thanksgiving day. Three prizes will be given.

The Louisville wheelmen were successful in their fight against an objectionable lamp ordinance.

F. G. L. Hunt, of Grand Forks, arrived in St. Paul Monday, on a bicycle, having ridden the distance, 400 miles, in five days.

The Fort Orange and Albany wheelmen are preparing for a joint parade. Invitations have been extended to nine out-of-town clubs.

The New York Tourist Wheelmen have arranged for a run to Coney Island on Nov. 13, Yonkers Nov. 20, Fort Schuyler Nov. 27.

J. W. Tubb is taking a census of the New Haven wheelmen, and so far he has found nearly 2,000, a tenth of that number being women.

John Graf, a Philadelphian, has brought suit against George W. Lafferty for damages. Graf says Lafferty's team struck him while he was riding in the park.

Two Columbus wheelmen, while coasting a steep hill near Harrisburg, came to a sharp bend in the road. Their speed was too great to allow making the turn, and they went over a steep bank.

The New Haven B. C. has just had a turning over and commenced anew. The board of governors has been done away with and the club will now run things. Even the constitution is being revised.

A relay bicycle race was run from Frostburg to Cumberland and return on Sunday. The time consumed in making the round trip was 2 hrs. 8 min. Distance eleven miles. Good time, indeed, for a relay ride of eleven miles.

The Achille Philion aggregation, including Mr. and Mrs. Philion, Lillie Williams and Charles W. Price the Milwaukeean, sailed from New York Saturday for Havana. They are going to show the natives of the Indies and South and Central America what bicycle riding is.

The wheelmen of Salt Lake City are greatly stirred up over an ordinance introduced in the city council preventing riding on sidewalks. They say the streets are of such a character that it would be impossible to ride, and they desire the ordinance so modified as to permit riding on the walks when lamps and bells are attached to the wheels.

The mileage contest among the members of the Allegheny Cyclers of Pittsburgh was won by C. L. Miller. The club offered a gold medal for the member who covered the greatest number of miles between May 1 and Nov. 1. Miller's record was 6,712 miles. Miller worked nine hours a day and averaged eighty-four miles a day, including eight century runs during October.

Two deaths resulting from injuries received through falling from bicycles have recently been reported. One was that of Thomas P. Gross, a conductor on the N. Y. & N. H. railroad, who was riding from Spring Valley to Haverstraw, and was thrown in such a manner that the handle penetrated his groin. The other death was that of Charles H. Felker, of Dayton, O. Felker attempted to get out of the way of a coal wagon while on the curve of a car track, but fell and injured

his neck and collar bone. A little later he was thrown again and struck his head. The two injuries were such that spinal fever and death resulted.

That a man has ridden a bicycle in the time of the mile of Nancy Hanks is taken by the Philadelphia Press as evidence that "a man is nearer a match for a horse than is ordinarily supposed." Our contemporary should not lose sight of the difference in the condition of the test. On one hand the bicycle aided greatly the speed of the man; on the other it retarded the speed of the horse. In addition to the bicycle or cart the horse had to carry along a man.—*Nor-tonville (Kas.) News.*

Last week the annual election of officers of the Grand Rapids B. C. was held, resulting as follows: President, J. H. Taylor; vice-president, C. H. Holt; secretary, James Stewart; treasurer, P. S. Hunt; directors, W. B. Folger, A. B. Richmond, W. H. Stebbins, F. H. Escott, F. C. Heath; captain, F. S. Richmond; first lieutenant, W. B. Simmons; color bearer, F. S. Gilbert; bugler, W. J. Gouldsbury. Tuesday evening an athletic entertainment was given and election returns were received.

Frank Lenz, *Outing's* traveling wheelman had this to say to a California newspaper man: "The papers back east had reported that the Indians had chased me in Montana, and just as I was getting away from them my wheel broke down. They told how I was caught and my baggage overhauled, and that a bottle of whisky which the redskins found

MEN WE ALL KNOW.

No. 8—Asa Windle.

was the only thing that saved my life. There wasn't a word of truth in this yarn, but it worried mother, and she had been keeping the wire hot with inquiries. I have it in for some of those newspaper men." And he probably has it in for the papers that reported him drunk about the streets after a banquet in his honor.

At Baltimore Saturday a certificate of incorporation was filed by Harry Lee, B. Downey, N. Tip Slee, Edward C. Wollman, Joseph E. Geigan, Charles M. Rhodes, Robert C. Downey and Parry Lee Downs to incorporate the 'Cycle and Athletic association of Baltimore County, "for the purpose of buying, selling, mortgaging, leasing, improving, disposing of or otherwise dealing in lands in this state and partly beyond this state, and for maintaining grounds, dwellings and improvements for 'cycling and general athletic sports." The principle office is to be at Towson, and the period of incorporation is limited to forty years. The capital stock is fixed at \$80,000, divided into 600 shares at a par value of \$50 for each share.

CHICAGO, ILL.

WHITWORTH CYCLES

. . . . U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

DUCKER WAS RIGHT.

It is a by no means unusual event for the racing board of the L. A. W. to find itself the victim of attacks by all sorts and conditions of men, some of whom are thoroughly familiar with racing matters, while others, particularly space writers for the daily press, know absolutely nothing about them. The members of the present board have been bitterly assailed at times by people who entirely overlook the fact that the league membership at large, through representatives sent to the annual meetings of the national assembly, is very largely to blame for what seems to the complainants to be the mistakes and shortcomings of the racing department. But its troubles have been light, airy playthings as compared with the experiences of racing boards of bygone days.

The great complaint against the racing system of the league for years has been the manner in which men in receipt of salary and expenses from manufacturers and clubs have been permitted to race as amateurs, to the great discomfiture of others really entitled to that title, and in open violation of the rules of the league. Once, and once only, was a plucky attempt made to abolish the evil, for evil it must be called until the rules are changed. That effort was made by Abbot Bassett, then chairman of the board, in 1886. He was backed by the executive committee of the league. A number of men were expelled, but the majority have been reinstated by subsequent appointees, none of whom, save Davol, who met with such opposition by the then president, James R. Dunn, that he positively declined to continue in service, and Randall, who, for his temerity, was removed by the same official, have had the pluck to follow Bassett's example. Therefore the rules of the league have been set at naught by the men selected to enforce them.

And why? Because to enforce them has been impossible. All praise, then, to the racing board, under Raymond, which now comes boldly to the front, and says: "Gentlemen, the rules cannot be enforced. We recommend a change."

That the recommendation should be acted upon there can be no question. When Mr. Luscomb talked to the national assembly at Columbus, last February, on the subject of prizes and expenses, many were surprised at the favor with which his remarks were received. Luscomb recommended two classes, and

though the question was not pushed the way was paved for a change.

We are not yet allowed to know authoritatively just what changes the racing board will recommend. Owing to the contract now existing between the league and the Wheelman Company, which contract has been and is being severely condemned on all hands, we presume the chairman was not permitted to give out any information on the subject. His notice in the *Bulletin* contained only the following:

The amateur rule was then brought up for discussion, and it was decided to recommend a number of radical changes to the next constitutional convention, which changes will be published in the form of a proposed amendment to the constitution, the establishment of two classes of riders, and the prize question, receiving careful consideration.

Some further information appeared in the following issue of the paper, however. It was written by a member of the board. He offers the following advice to those riders who, at the time, had in contemplation a trip to the Pacific coast at the expense of an eastern paper and a number of manufacturers:

Don't monkey with a buzz-saw, gentlemen, and jeopardize your positions in the L. A. W. at a time when the proposed broadening of the amateur rule and the establishment of two classes of riders next year will allow you to profit openly and above board by the results of your labors on the path.

This seems to indicate very clearly that the board has decided to advocate the very idea promulgated by Henry E. Ducker and placed in operation by the American Cyclists' Union over six years ago—the plan advocated for many a long day by men whose experience dates back to the early days of racing—the formation of a class for the salaried, expense-paid individual, who, by reason of his ability to make records, is an indispensable attraction, so that the pure amateur may have a chance to win something once in awhile.

It will be a hard pill for some people to swallow. The secretary of the league will find it particularly bitter, for the controversy between Messrs. Bassett and Ducker in 1886 was acrimonious in the extreme. How the editors of the *Bi. World* and present holders of the official organship contract will take it we cannot tell, for at that time they were, as now, staunch supporters of the league while bitter opponents of Bassett, to whose credit they placed about every crime in the calendar.

But, let them think what they may, the fact remains that, according to the present racing board's and executive committee's views, Ducker was right.

Like many another great reformer, he was not appreciated at the time. The men who controlled the league were conservative.

Ducker was a progressive and energetic man.

He saw that the promateur could not be downed, or rather that the maker could not.

He realized that the success of cycling depended in no small measure on the maker.

He knew that to the maker the establishment of wheelmen's rights, so far as it had gone up to that date, was due.

He knew that the withdrawal of the assistance of the maker meant a setback for racing and the sport generally.

He, while a member of the racing board and president of the Springfield Bicycle Club, vigorously opposed the suspension of riders without proofs of their guilt, for the board considered every suspect guilty until he proved himself innocent.

He resigned his position on the racing board, helped form the American Cyclists' Union, and asked that a mail vote

be taken on the advisability of the league's dropping racing altogether.

For all this he was notified by President Beckwith that his resignation of the chief consulship of Massachusetts, if tendered, would be accepted. It was not tendered, and Ducker was "removed."

He only worked the harder on his American Cyclists' Union plans.

He gained a thousand members for the union in a few weeks. Constitution, by-laws, racing rules, all were carefully considered, and as a result the country had, that fall, the finest circuit of races ever known up to that time and hardly excelled by those of to-day.

The league meanwhile had made professionals of all the makers' amateurs who could not or would not prove their innocence. It was by far the stronger and larger body. Large bodies move slowly. The league could not see the force of Ducker's arguments. Ducker himself was eventually called away from Springfield. There was no one to fill his place, and in time the American Cyclists' Union died from lack of sustenance.

And then came the setback in cycle racing which Ducker had so confidently predicted. The successful meetings of 1882-1886 came no more. International racing died out entirely, and it was not until four years later that the riders became once more bold enough to brave the league's wrath. They were backed by wealthy clubs and defied the racing board.

For nearly three years the board has been called upon to enforce the rules. It has not, and cannot, and at last is forced to the acknowledgement that, though ahead of the times, Ducker certainly had the right idea.

It may be well, under these circumstances, to glance at some of the rules of the A. C. U., and ascertain what they were. The union was organized very early in 1886. After numerous meetings, the adoption of rules, amendments of same, etc., a code was finally decided upon, in which we find the following:

It shall be their [the racing board's] duty to make inquiry regarding any wheelman whose amateur or promateur status is questioned, and cause one of its members to investigate all protests or charges and report his findings to the board for action. A member who may have been suspended or expelled can be reinstated only by a unanimous vote of the board.

SECTION 3. The standard of membership in this organization shall be determined by the following rules:

(A) An amateur is any person who has never engaged in, nor assisted in, nor taught any recognized athletic exercise for money, or who has never, either in public or in private, raced or exhibited his skill for a public or a private stake, or other remuneration, or for a purse, or for gate money, and never backed or allowed himself to be backed, either in a public or private race.

(B) A promateur is one who at any time or in any degree has violated his amateur standing as defined above, by receiving expenses or other remuneration for cycle riding, or any other recognized athletic exercise.

(C) A professional wheelman is one who at any time and in any degree has violated his amateur standing, as specified above.

SECTION 4. To prevent any misunderstanding in interpreting the above, the union draws attention to the following explanation: A wheelman forfeits his right to compete as an amateur, and thereby becomes a promateur, by

(A) Receiving expenses or other remuneration for riding the cycle or training or coaching others for cycle racing.

SECTION 5. A wheelman forfeits his right to compete as an amateur or promateur, and thereby becomes a professional, by

(A) riding the cycle or engaging in any athletic exercise for a money prize or for gate money.

It seems to be the opinion of race-meet promoters that without the Zimmermans, the Windles, the Lumsdens and the Johnsons race meetings cannot flourish. It seems to be admitted that the pure amateur is not a drawing card. He is a very good "fill in" for the space between the races of the cracks, but his drawing power is extremely small. Race

promoters also believe that the public will not patronize races between men advertised as professionals. They may be right or they may be wrong in believing that the many swindles perpetrated in by-gone days, and which the papers seized upon with such avidity, would prevent people paying to see professional contests. But under existing rules Zimmerman & Co. are undoubtedly professionals. They do not ride openly for money it is true, but the rules forbid other things of which these men have been guilty. Hence the necessity of a middle class.

What better plan can be suggested than that of the A. C. U.? The word promateur fits these men exactly. It was first used years ago—in 1881 as nearly as we can remember—by that famous writer, Pendragon, now deceased, in the London *Referee*. He applied it to the great Manhattan Athletic Club runner, Myers, who, at his club's expense—or, to be strictly correct, at the expense of certain of the members, for the M. A. C. was an altogether different organization in those days—crossed the Atlantic and competed successfully with the English athletes. The only difference between Myers and the bicycle riders of to-day was that his supporters had nothing whatever to gain, while the manufacturers are benefited by the efforts of the riders.

In Ducker's day the riders were in an exactly similar position to those of to-day. We therefore believe that, if the racing board's recommendations are of the kind we anticipate, they should certainly be carried out, following generally the lines laid down by the A. C. U.

It is not to be expected, of course, that the professionals will be admitted to membership; indeed, so close are promateur and professional to each other that the latter class seems superfluous. The promateur is allowed to do all that the professional may, except accept a money prize.

There is one thing which should be attended to at once. We refer to the publication of the proposed amendment to the constitution, so that members may know to a certainty what is proposed. It is a measure of the utmost importance, and one on which everyone should be given ample opportunity to express an opinion. It will be one of the most important questions discussed for years, and should therefore be thoroughly ventilated.

HANDICAPPING FEES.

A paragraph contained recently in our eastern correspondent's notes has led to a discussion of the question whether league handicapping fees are too liberal. An eastern handicapper has been credited with receiving about three thousand dollars as the result of last season's work, and this has been compared with the salary paid the official handicapper of the Amateur Athletic Union. As a matter of fact no league handicapper has received anywhere near the sum mentioned, and as to the union's official, he is employed, at a regular salary, as assistant to Secretary Sullivan, and his handicapping duties are but a portion of the work required of him in that capacity.

The amount received by one or two handicappers may be rather liberal. This, however, is attributable rather to the large territory one man is allowed to cover than to the rate charged.

The districts are not judiciously arranged. A far better plan than that now in vogue, we believe, would be the appointment of a handicapper in large cities at intervals of from one hundred to two hundred miles. At present the same handicapper covers Michigan, Illinois and Indiana; another, the whole of

New York and New Jersey; a third, Ohio and Kentucky. It is surely a fact that a handicapper in St. Louis could do far better work than a Chicagoan, for example, in the case of races held just across the river, at Belleville; yet, because the latter town happens to be in Illinois, the race promoter must send his entries to Chicago, Indianapolis or Detroit, each of those cities having official handicappers for the district. Similarly, a race promoting club in Buffalo is forced to employ a man five hundred miles away, notwithstanding western New York promotes a vast number of races, and a man centrally located could do better work.

It would be beneficial, we believe, to appoint men as above suggested, and allow the race promoter to employ any one within a given distance that may suit his fancy.

Let no one be uneasy about the amount of the fees. The handicapper earns all he receives, and oftentimes spends a large proportion of the amount following up the racing and keeping posted on the form of the men.

In England they are becoming convinced that the day of the one-man-timer is past. Recently Schofield made a splendid record at Putney, and three very prominent cyclists, all experts at clocking, held watches on him. But the official timekeeper, Pembroke Coleman, was not there, and the N. C. U. refuses to accept the record. *Wheeling* thinks that the governing body should accept the time as announced by the three well-known gentlemen. This is our opinion, also. Mr. Coleman probably is a very clever timer, but it stands to reason that three good men ought to prove as reliable as Mr. Coleman. It seems a pity that when a man makes a record it can not be put to his credit just because Pembroke Coleman is not on the grounds. The Englishmen have, after great hesitancy, accepted records made in America and timed by three unofficial timers. If it works here, why not there? There seems to be no reason why three ordinarily capable men should not be able to give as correct time as one.

The English cycling papers are having a troublesome time over the elliptical sprocket wheel—chain wheel, they call it. They have arrived at all sorts of conclusions. It seems to be the general impression among those who have used the device in this country that for hill climbing it is excellent, but for ordinary work there is no advantage gained.

LANTERN parades are regarded as superfluous abroad—that is, by the cycling press—and the sooner the same opinion is arrived at here the better. They will do well enough for boys. They do cycling no good.

It appears to us that the *Bicycling News'* full-page picture of Frank Shorland was a little stretched.

Now With the Overstone People.

Arthur Flavell, formerly of Flavell & Co., makers of the Reform, has associated himself with Loyd, Read & Co., manufacturers of the Overstone, and will hereafter be the company's general representative. Mr. Flavell will shortly leave for this country with samples of the latest things in Overstones. The designs for '98 consist of a racer weighing only twenty pounds, a light roadster, twenty-five pounds; with brake and guards, twenty-eight pounds. The Overstone is a well made machine and is known in this country. Any letters addressed to this office will reach Mr. Flavell.

ELECTION BETS PAID.

How Some Prominent Cyclists Suffered By the Land-Slide.

A couple of weeks ago there was a good sprinkling of Republican cyclists—you can't find many now, however. They are all Democrats; at least, they won't admit that they were ever Republicans. Still there are a few who are marked, and are, consequently, easily distinguished. The wheelmen took a great interest in the recent land-slide—before and since the great event. They talked politics and some protectionists were rash enough to risk a few wagers on the result. They were not all cash transactions, however; some don't believe in cash prizes. They preferred to gamble away their eyebrows, mustaches, false teeth, etc. As a result there are several slightly disfigured and unfamiliar faces about the streets of Chicago. Probably there are others in some parts of the country, but the returns are not all in as yet. Even the lady cyclists took chances—and lost. Not an eyebrow, nor a mustache, nor even false teeth, but a bet, and the penalty was to wheel 180 pounds of man a block or two. Miss Alice Poole, president of the Columbia B. C., an organization of ladies and gentlemen, was an admirer of President

betting on the presidential election he was evidently not "fit." He had seen enough of free trade in England and that was what forced him to leave the place. "If Cleveland should be elected," he said, "hit'll not be a fortnight afore Hi'm 'oofin' it hout o' this bloomin' place, too." He staked his all on 'Arrison. "Hi'll stake me bloody hexistance on," he said, when he offered to wheel Richardson four blocks and part with half his mustache and one eyebrow. As was the case with Miss Poole, the Harrison supporter gave big odds—about two to one in the Leaming-Richardson case. Harry has paid his bet, but he has remained well under cover since. Saturday night he wheeled his 200-pound opponent the required four blocks and patronized the barber to the tune of one eyebrow and a half-mustache.

When W. A. Rhodes returns from the south he will be compelled to ride a g. o. o. to Elgin, Aurora and return.

Harry Foster of the C. C. C. is also minus one mustache, while Henry Bingham has worked the wheelbarrow act to perfection. There are—or were—a good many Republicans in the Chicago C. C. They were, to a more or less extent, great betting men. They're not now. Some

ELECTION BETS PAID.

Harrison. She thought everybody else was in the same frame of mind except J. S. Graham of the Caxton Company, a neighbor. He had an inkling that Grover would get back to the executive mansion and was willing to give Miss Poole a wheelbarrow ride if things didn't go that way. He is six feet high—and just about as heavy; Miss Poole is hardly as large as the average woman. She was really giving odds on Harrison—not two to one quite, however. Anyway, as she lost she paid the bet and Mr. Graham was trundled up and down Drexel boulevard for five long minutes. Though it was dark there was a good crowd around to see the fun.

Nicolet lost a mustache he had been cultivating for, lo, these many years. The popular trick rider is usually pretty careful—one has to be naturally so in his line—so he took the Republican end of a bet. He thought only of how the other fellow would look, but—perhaps you can find his likeness in the picture which graces this page. Bob Lennie—auburn haired Bob—had been coaxing his mustache since he was sixteen. His work was well done. That mustache was a beauty. His likeness is in the group, too.

But Harry Leaming, the trainer—what a sight! Harry has brought out many a crack, and never made a mistake, but in

lost a little, some a good deal, and one all he had, all he had in sight and a great deal besides; but he was game even to 11 o'clock Tuesday night, when he bet Illinois would go Republican.

On Sunday morning last J. P. Walters, of the Taylor Cycle Company, was wheeled in a barrow from Van Buren street and Wabash avenue to the Lincoln Cycling Club at 1 Ogden Front, three miles, by Mr. Murphy, in the employ of the same firm. Walters weighs 212 pounds and Murphy 160, yet the latter never once tipped the heavy man out nor did he drop the handles for the one hour and twelve minutes required for the trip.

One of the happiest men in the cycle trade to-day is R. L. Coleman. He is \$1,500 ahead by Cleveland's victory. Last summer when the *Recorder* was honored with ten half-page advertisements, the *Press* solicited the same business, but was refused. As the request was persisted in, Mr. Coleman made a "bluff" at the solicitor. He offered to pay double price for the ad. if Harrison was elected, and if the Democrats were victorious he was to have the advertisements free. The "bluff" almost took away the breath of the advertising agent, but after consulting with the business manager Coleman's offer was taken. R. L. is a red-hot Virginian and an ardent follower of Jacksonian politics. While

not in the city at present he is, nevertheless, rejoicing at his country home in his native state, and sends word to the office here to have all the sport they want over his victory.—New York Recorder.

Where the Adv. Caught.

T. B. Russell, writing on the subject of advertising, in the last issue of *Printers' Ink*, says: "One is often asked, 'how does it do a person any good—how does it promote the sale of his wares—to have their name or his mentioned casually, or printed in an advertisement, without further appeal?' I do not attempt to say just how this does good; but I would like space for a short personal statement bearing on it. Some two months ago the editor of a London magazine asked me to write an article on a subject connected with bicycle riding. I bought one or two cycling papers, in order to get up the topic, and without considering for a moment the idea of investigating in a bicycle (for I had tried the sport and given it up as distasteful not long before), I was necessarily thinking for a day or two a good deal about bicycle riding. In due course, I wrote the article and drew the fee. Next week I bought myself a bicycle again and have ridden with increasing enjoyment ever since! Now, there was no particular reason *why* I should do this except that the idea of 'bicycle' had been a good deal in my mind. I was not captured by any particular advertisement, but simply moved to purchasing point by the mere fact that the subject was knocking about in my head. The reader is asked to excuse the egotism of this narration in consideration of the advertising question illustrated by it. I do not attempt to explain, however."

Chicago Notes.

A. T. Merrick, of the *Wheel* staff, is in Chicago this week.

Vere Davies is negotiating for Battery D to give a six-day bicycle race in the near future.

Twelve Chicago club men attended the run Sunday, going to Hegewisch, Hammond and Pullman.

The Plzen Cycling Club gradually increases in membership, and now has over seventy names enrolled.

H. M. Gardnier has resigned as secretary of the Lake View Cycling Club and C. F. Swain has been elected to succeed him.

W. Ed Davis, president of the March-Davis Cycle Company, will be married Nov. 23, at New York, to Miss Bennett, formerly of Buffalo. After a three-weeks' wedding trip Mr. Davis returns to business.

A. D. Macomber starts from Chicago the first of next May to establish a record from this city to San Francisco. Mr. Macomber, two years ago, was a prominent Memphis wheelman, but now claims Chicago as his home.

The two tickets for the election of the Century Road Club are not yet ready. None but workers are wanted and many of these have declined the honor. The committee is at work and promises an excellent array of candidates, if it takes all winter.

New Athletic Park.

Mansfield, Ohio, is striving to have an athletic park. The *News* of that place says: "The athletic park project must not be allowed to become dormant. It should be hustled from the present time. This thing of agitating a subject and dreaming on its accomplishment until the week before it is needed is characteristic of some localities. See to it that the Mansfield athletic park project does not fall into the same rut."

The REFEREE has opened at its eastern office a trade register, in which visitors to the national metropolis can place their addresses, so that a communication between buyers and sellers may be had at any time. Visitors from abroad will be especially benefited by the register, as it will keep their whereabouts known. Letters addressed care REFEREE, New York, will be well looked after and placed in private boxes and forwarded when desired.

Among the callers last week were: R. L. Coleman and E. J. Day, of R. L. Coleman & Co.; P. H. Bernays, Overman Wheel Company's manager, San Francisco; Edwin Oliver, Cleveland; F. H. Henning, Peoria; Charles Schwalbach, Brooklyn; W. C. and C. E. Walker, Elliott Cycle Company, Newton, Mass., and Pope Manufacturing Company, Boston, respectively; Joseph Ketchum, Brooklyn; W. M. Perrett, Philadelphia; Mr. Wall, Wall & Boyer, Philadelphia; H. Crowther, *Bicycling World*; W. D. Callender and A. T. Merrick; Thomas Saunders, Birmingham, Eng.; M. Quinlan, Gendron Wheel Company; W. E. Hicks, St. Louis *Post-Dispatch*; J. H. Ives, New York Belting and Packing Company; L. Ketchum, representing Samuel Snell; Stephen Golder, New Howe representative; W. H. Kirkpatrick, McKee & Harrington's salesman.

They Come High.

The manufacturer who made a bid for a racing man to go with the *Sporting Life* car—and who received the reply which was printed in last week's REFEREE—sent a reply stating that the rider's estimation of his services were below the standard of the man that he would like to secure. He said he wanted a man who could be worth \$5,000 at least, for the trip. "Do you want to see a copy of the letter?" was asked the REFEREE man by the manufacturer. The offer was declined, as the REFEREE man has weak nerves. There seemed to be no desire on the part of either manufacturer or racing man to avoid publicity. Where, oh, where is that racing board?

The A. A. U. and the Makers' Amateur.

W. B. Curtis, president of the Amateur Athletic Union, was seen last week by the REFEREE's New York representative in regard to what action the union would take in regard to the makers' amateur or trade class if formed by the L. A. W. "Father Bill," as he is affectionately called by New York newspaper men, was busy, but found time to answer a few queries.

"What action will we take if a trade class is formed, and what will we consider them? Why we will consider them professionals, pure and simple."

"What will your association say or do in regard to the present class of prizes offered amateurs?"

"We will want to know at the next meeting, at which Mr. Luscomb will represent the L. A. W., if his organization considers thousand-dollar teams, diamonds, coffins and burial lots suitable prizes for amateur athletes. We don't consider them so, and we will possibly ask some other questions regarding the

class of amateurism permitted and encouraged by the League of American Wheelmen racing board," volunteered Mr. Curtis.

The Election and Tariff Reform.

As far as the New York trade is concerned the success of the Democratic party has not caused any talk about what Grover Cleveland & Co. will do with William McKinley's little act. One of the leading manufacturers (a Republican) said it meant one of two things, a moderate reduction of the tariff or the flooding of this country with cheap labor from abroad. He would rather have the tariff slightly reduced and the foreign labor stop at home. "Cleveland will not adopt any radical changes; but that a reduction in the tariff will take place I have no doubt whatever. It will make very little difference, as it will give us our raw material the same advantage." Other people think that importers may hold off in order to see if Cleveland will call a special session to reform the tariff law. But before anything can be done the season will be far advanced, and it seems few will care to wait for congress, which is notoriously slow in action.

Educated, Refined, Wealthy!

A Nashville paper prints a column interview with Daniel Overman Canary, and dishes up the professor in regal style. Dan must have impressed the local reporter. This is what was printed: "Mr. Canary is the champion trick rider of the world, is highly educated and refined, is a member of the Overman Wheel Company, who makes Victor bicycles, and is traveling in the south for his health!" Almost anybody who knows Dan can appreciate the broad smile on the Canary bird's face after he read the interview, and that is where the traveled man with a reputation shines in contrast with the man who has not rubbed up against reporters in many lands. From an advertising point alone, Dan earns his salary. But "highly educated, refined, a member of the Overman Wheel Company"—ahem! Mr. Canary should now be eligible for league membership.

Dry Goods and Bicycles.

A traveler for a well-known eastern house was a caller at our New York office last week, and in a talk alluded to the alarming increase in the houses of the John Wanamaker order, which are commencing to cut quite a swath in the bicycle trade. That such houses are a menace to the trade no one will deny; and as a rule they employ people to buy who don't know a bicycle from a button or ball bearings from solid tires. The traveler, a nice young man, feels grieved at such houses, and he had a cause for it. After waiting, by order of his firm, for three hours to see the buyer of one of these houses, he was ushered into what he termed a "sweat box." He was asked, first, "What price do you ask?" He named a price—a very low one for high grade, cushion-tired wheels—when he was cut short with: "Oh, we can't talk to you; we can buy lots of wheels at half that price;" "Yes, but what make are they?" persisted the young but experienced salesman. "Oh, we don't know or care about the make; our customers don't ask that; the price is the thing," was the reply. Feeling crushed, indignant and humiliated generally, the young man sought air with profound

admiration (?) of the dry goods man's appreciation of a high grade bicycle. In Boston, recently, a concern of this kind wanted to make a REFEREE man believe that some old tin-pot wheels, of antique pattern, were high grades. Then they had the good taste to ask about a third more than the true value of the wheel.

Road Racing—Evils.

The racing members of many English clubs have been arrested and punished lately. The most recent violators of the Highways act were several members of a Dorsetshire club, who, when arrested, pleaded they "didn't know the law was loaded." This either proves that the N. C. U. is not much of an educator or that the Dorset men are very ignorant of the road laws of England, or else that they are prevaricating amateurs. "The Bench" (which generally means in moral England a titled somebody with plenty of pompousness and little legal knowledge) was lenient and let the boys down as follows:

The chairman (Right Hon. Viscount Portman) said that the bench would not inflict a fine, this being the first case before them, and the young men had evidently not known that they were doing anything wrong. He, however, cautioned them and all other cyclists from rapid riding on the highways, as it was clearly an offense against the Highways act. He hoped they would be more careful in the future, and dismissed the case.

The time is not far distant when road racing will be similarly dealt with in this country, as it is in direct violation of the courtesies of the road and the intended uses of the road. The public has been wonderfully lenient with the road racing business, and it is a decided tribute to the popularity of cyclists and the cycle, but there must come an end to forbearance, and it might be well for cyclists to forbear making the road a race track. After the racing board has done tinkering with the amateur definition it might tinker with profit on this very important subject: "The uses and abuses of the road by cyclists."

The Lady Stenographer's Puzzle.

Charles Schwalbach offered a number of prizes to be awarded to the persons guessing nearest to the number of bicycles that passed through Prospect Park and down the Coney Island boulevard on election day. The following winners have been announced: First prize, bicycle, H. F. Pierce, Long Island Wheelmen; second prize, silver watch, Mabel Conklin, Flatbush; third prize, \$10 gold piece, F. Pfeiffer, Brooklyn; fourth prize, rifle, H. Rockefeller, Brooklyn. H. F. Pierce counted 988 bicycles, while Miss Conklin named 989. The judges set the number at 988. There is a joke connected with the prize part of the enterprising (and only) Schwalbach's scheme. The second prize was won by Schwalbach's stenographer, and the prize was six men's shirts. It puzzled the fair prize winner to know how she should dispose of them. Alex Schwalbach, as usual, came to the rescue. "Get married and give them to your husband," suggested the horse doctor, but a silver watch in place of man's attire made Mable happy.

ENGLISH PRESS OPINIONS.

Amateurs and Professionals to Be Ruled By the N. C. U.

There is but one course open to the N. C. U., and that is for it to take over the entire management of professional racing. The scheme is really so simple that I wonder at any other being put forward. There would be two classes of membership to the new Union—amateurs and professionals. The applicants for admission to the amateur ranks would have to be able to prove to the satisfaction of the committee appointed to inquire into the status of all candidates, that he had never competed for a money prize; that he had never disposed of a prize; was not in receipt of nor had never received remuneration from a cycle manufacturer or agent, either directly or indirectly; that he had never been provided with a machine free of cost, and that he had never been allowed an extra discount by any maker in order to induce him to ride that maker's machine. And here we shall find a stumbling block, for the simple process of riding a machine which had been lent for a special purpose by a maker at a low rate of hire, would constitute the rider a professional, and even the acceptance of a commission in return for recommending a machine to an ultimate purchaser would be fatal to a man's amateur status. Any candidate unable to prove his innocence would be permitted (all other conditions being satisfactory), to rank as a professional. The two classes should be allowed to compete in any race or at any race meeting promoted under N. C. U. rules, the only new condition being that while the professional would have the choice of cash or its value as his reward, the amateur would be confined to articles of vertu. Any offender against the section of this rule applying to amateurs would either be instantly relegated to the professional ranks, or, should his offence be very flagrant, be debarred from racing under Union rules altogether. Then our National Cyclists' Union would be a union in actuality as well as in name. There is a source of satisfaction in the reflection that this resolution will never be carried. The press are unanimous in their condemnation of it, and when the press does set its face against a scheme and apply the power of adverse criticism, the formulators of the said scheme might just as well accept the inevitable and shut up shop without another word. —Northern Wheeler.

Harris Ranks High Abroad.

A. W. Harris, the little Leicester crack, must surely be rated as the most successful Englishman upon English tracks during '92. He has won 42 firsts, nine seconds, and four third prizes, has two shares in three challenge cups of the aggregate value of 105gs., and one share in three more, whose total runs up to 130gs. Besides all this he holds the mile record for England, which, if not so fast as Yankee times, is probably nearly as meritorious as the best done in the home of Zimmerman. —British Sport.

Accepting English Records.

If, as appears likely, Schofield's records as made last week cannot be passed, it must be regarded as regrettable. With records tumbling down in other countries, it behooves us to leave nothing undone that would enable us to retain our share of them—at least, if we desire to hold a foremost place in the athletic world. Already we have been freely taunted with having lost the athletic supremacy which most people seem to agree we once held. It was stated in an

LADY'S WHEEL Weighs 36 Lbs.

Kirkwood, Miller & Company,

PEORIA, ILL.

American paper last week that the American athlete is the greatest in the world because he lives in a Republic! We are not going into that, but we do think that the conditions under which we live are sufficiently conducive to freedom to enable a man to have his records verified, and officially accepted. If Schofield's are not, we do not know with whom the fault will lie. Perhaps with the rider and his connections. If with the official timekeepers, we think it would be well if some explanation were forthcoming.—*Wheeling*.

* * *

Like an American Broncho.

An English cycling paper enumerates among the advantages of the bicycle the undoubted fact that it does not rush off home without its rider in case of an accident, like a horse, and alarm the whole family. The writer might also have added that a decently brought-up machine will not roll over its rider and crush him to a jelly if it does see fit to fall; neither will it kick him on the head when he is prostrate, nor get up and sprint down the road while he drags behind by one foot, and dash out his brains *en route*. Cycles will bite sometimes; in fact, an able-bodied safety, with good rat-trap pedals, can nip quite a large slice out of its rider's leg on occasion; and they can buck-jump on a greasy road like an American broncho; but that is about the worst of them.—*Irish Cyclist*.

* * *

Hillier and the Americans.

Tempora mutantur. A few years ago probably no name so stunk in American nostrils as that of G. Lacy Hillier, who at that time was busy doubting American times. Nothing was then too bad for Hillier in the American press. Now, because he worked up Zimmerman,

nothing is too good for G. L. H. in the American press. He is the finest editor who ever trod shoe leather, and never wrote a personality. So say the Americans, and so say all of us.—*Wheeling*.

Denver's Strong Claims.

Louis Block, in a speech at the Lincoln club Japanese smoker, last Saturday evening, outlined the plans of Denver to secure the national meet for 1894. Work has started this early that they may make a surety. Colorado has only a few over 200 league members and there are, per the assessor's roll, 3,300 wheelmen in Denver. The cyclists are about to build a \$60,000 club house, and prominent wheelmen have formed a company to issue a weekly cycling paper, beginning the first of the year, to be known as the *Western Cyclist*. Great credit should be given the Denver cyclists for their energy. It is thought that by '94 over 1,500 league members may be enrolled. Denver has grand scenery surrounding it and Pike's Peak as a superior attraction. Several very fine runs can be taken, and from Golden, reached by train, the cyclist may coast fourteen miles through delightful scenery into the heart of the city. Denver's streets are of asphaltum. At the national meet next year this western city will be represented by an active band of hustlers who will enlist favor for their cause. Chicago cyclists seem to be very favorably inclined toward Denver.

Col. Pope's Sister Ill.

Colonel Albert Pope, with rare devotion, has for the past two weeks been a constant attendant at the bedside of a sick sister in Boston, and for three nights scarcely moved from his post. The sister and Colonel Pope are twins, and the lady is a successful physician of Boston.

A DEBATE ON "AMATEURISM."

Several Schemes Presented for the Government of the Pure Whites.

In England the cycling politicians are endeavoring to fix up the amateur question, but they seem to be as far away from a satisfactory settlement as are the Americans. Says the *Cyclist*:

Last Thursday about thirty well-known men found their way to the Central Club rooms in Chancery Lane, where J. J. Glynn opened a discussion on the government of modern cycle racing, by the reading of a paper. Percy Low occupied the chair, and besides those subsequently mentioned as speakers we noticed present Peter Harris, J. S. Smith, T. W. J. Britten, W. J. Kelly, J. F. Walsh, A. C. Edwards and others.

Mr. Glynn asserted at the outset that the mode of government of the sport of cycling pursued by the union was altogether opposed to the needs and desires of the present-day racing man. The union should legislate for the sport as it is today. Reviewing the many difficulties of the present situation, which must not be tinkered with, he proceeded to unfold his plan for remedying the existing troubles. He would divide the present so-called amateurs into two sections—a trophy class and a cash class. The former would race for trophies, the maximum value allowed being £7 7s., whilst the latter would accept cash prizes. In certain races the trophy class would be allowed to meet the cash class without loss of status, by the former. At all costs, the present racing stars in the trade should be retained. They would be expected to join the cash class, which he did not think they would object to do, but if they continued to pose as amateurs while retaining their connection with the trade, expulsion would be their fate. Why not cash for prizes? No degradation occurred in the sports of shooting and archery where such prizes are competed for. The Sheffield runner had been held up as an awful example of what cyclists might become who raced for cash. But the Sheffield runner had no powerful organization to look after him, such as cyclists would have under his plan. After enumerating the many advantages the cash prize would confer on the ardent young racer with a slender purse, Mr. Glynn explained the system or licensing racing men which he advocated. These certificates of eligibility would be applied for by each racer, who would pay fees amounting to 3s. 6d. to the ruling body. In the event of misconduct on a racer's part the certificate would be suspended or forfeited. The certificates would be

produced at race meetings to prove each rider's status. Transfers from the trophy class to the cash class would at all times be allowed. The certificates would be renewable annually. Mr. Glynn sat down amidst applause.

C. P. Sisley supported the scheme unfolded by the opener, whilst thinking it somewhat too detailed and lacking in breadth of treatment. The present masquerading must be brought to an end. He thought the cash class should be formed under the auspices of the union, but, anyhow, cash prizes must be found in the near future. He believed in pure amateurism being cultivated—on prizes value five shillings and bronze medals. The two plans should co-exist. The trade class would prove difficult to handle, but with a strong ruling body he had no fear.

Three other gentlemen argued in favor of one class only, but their arguments were not as popular or as logical as the first two speakers.

The chairman agreed with Mr. Glynn's paper. In reply to Mr. Larette, he thought cyclists could afford to stand apart from the A. A. A. if necessary. He strongly insisted that the licensing scheme would be far easier to work than the present system of suspension. The union was run by a clique of men—honest and well meaning, he admitted—imbued with the obsolete spirit of gentleman amateurism, who controlled the destinies of the overgrown sport. These men must be ousted and fresh blood infused. Racing men must make up their minds as to what they wanted, and then secure the election of capable men on the union council who would shape the new policy.

So it seems that England is as ripe for a change in racing as is America. A lively debate is now going on in *Bicycling News* regarding two classes, and Dr. Turner, the advocate of two classes, is leading the charge merrily and seems to be sweeping the decks with his arguments.

James Miller, of Detroit, the cyclist who was run over by A. R. Currie on Lafayette avenue last May, and who subsequently began suit for damages, has now instituted proceedings against Currie's bondsmen, John C. Currie, Sr., and John C. Currie, Sr., with damages at \$1,000, it being claimed that A. R. Currie has skipped.

K. C. W. Road Race.

The annual twenty-five-mile Kings County Wheelmen handicap road race was run election day over the Irvington-Milburn course, and 500 persons witnessed the race. There were six starters—Morehouse, 6 min. handicap; McDonald, 3 min.; T. J. Hall, Jr., 3 min.; Hawley, 30 sec., and C. M. Murphy and Wells, scratch. The course was in fair condition, but a strong wind was blowing.

The first five miles was finished as follows: Morehouse, 19:05; McDonald, 18:14; Hall, 18:14; Hawley, 16:18; Murphy, 15:45; Wells, 17:46. Hawley won a special prize for making the fastest five miles. From the fifth to the twenty-fifth mile the race was close and exciting. The finish resulted as follows: Hawley, first, time, 1:22:33 3/5; McDonald, 1:29:16; Wells, 1:31:36; Morehouse, 1:32:01. "Billy" Murphy, with pacemakers, was to have tried to establish new figures for twenty-five miles on the road but his racer had been smashed, and the repairer, who failed to fix it in time, came in for a blessing from William. Hawley rode a New Howe road racer, and the fact was promptly cabled to Glasgow by Golder's orders.

* * *

A Series of Road Races.

The Washington Wheelmen, of Tremont, held their second series of road races on the Westchester course election day. About 1,500 persons were present, and there were 250 riders from the Harlem, Knickerbocker, New York, Manhattan, Riverside, Kings County and other clubs. The results of the races were:

- One mile, novice, scratch, closed—L. Eikwort, 1; R. W. Hillman, 2; W. Guggolz, 3.
- Two-mile, handicap, closed—S. T. Thompson, 25 sec. 1; E. B. Frost, scratch, 2; J. A. Swallow, 15 sec., 3.
- Half-mile, handicap, closed—R. W. Hillman, 40 yards, 1; W. Guggolz, 40 yards, 2; E. S. Prince, 40 yards, 3.
- Five-mile, handicap, closed—S. T. Thompson, 1 min., 1; E. H. Frost, scratch, 2; W. D. Edwards, half-minute, 3.
- Hundred-yard, slow race, closed—J. A. Murray, 1; T. S. Draper, 2; C. Smith, 3.
- One-mile, handicap, open—A. Dennicke, 140 yards, 1; C. A. Fulle, 135 yards, 2; J. H. Fulle, 135 yards, 3.
- One-mile, handicap, closed—F. Grote, 100 yards, 1; E. S. Prince, 90 yards, 2; S. T. Thompson, 80 yards, 3.
- Ten-mile, handicap, open—A. Dennicke, 5 1/2 min., 1; C. A. Fulle, 4 min., 2; J. H. Fulle, 4 min. 3. W. S. Campbell also started from scratch in this race, but was unable to overhaul the leaders.

* * *

New Baltimore Tracks.

The plans of the National Cycle and Pleasure Association have been announced, and another bicycle track is to be made close to the present track on the Pimlico road. The new track will be a model one. A large clubhouse will be erected on the grounds, with all the conveniences, including a buffet. There will also be sleeping apartments in the building for the use of racing men. The track will be a half-mile. Inside there will be a quarter-mile running track and a baseball diamond. Another attraction will be three tennis courts. The membership fee will be \$5 a year and stockholders will be admitted free to all events. Work will be commenced at once. Another proposed track will be in the eastern section

on the shell road near Keller's pavilion. If the plans are carried out it will be a popular resort and will be reached by the Baltimore and East Baltimore Electric Railroad.

* * *

Road Race at Lincoln, Neb.

The Capitol Cycle Club, of Lincoln, Neb., held its first annual ten-mile road race to Havelock, five miles and return, Friday last. The start and finish was made at Tenth and R streets. Long before the starting time arrived the crowd commenced to gather. Rivalry runs strong between Mockett and Griffith, and great interest centered on them. Griffith had handicap of fifty seconds on Mockett but preferred to start scratch with him. The finish was as follows:

E. R. Milwine.....	38:48
C. L. Shader.....	38:17
J. F. Enlow.....	38:51
D. Small.....	38:59
Joe W. George.....	39:09
Chas. Fisk.....	39:10
G. H. Conant.....	40:33
W. E. Lewis.....	42:19
J. E. Howe.....	42:27
Ed E. Mockett.....	37:45 3-5
Mode Griffith.....	37:47 2-5

* * *

Y. M. C. A. Races.

The annual handicap road race of the bicycle section of the Bedford branch of the Brooklyn Y. M. C. A. was held on the road from Elizabeth to Springfield and return, election day. The only mishap occurred to John Johnston, who was winning the event when his front wheel caught a stone, overturning his wheel. He remounted and captured second. The results of the race were: John S. Whalen, first, in 36:50; John Johnston, second, in 42:00; George R. Thrall third, in 42:30; E. Martin, fourth, in 43:00, and Alfred Daybill, fifth, in 45:00. Whalen won both prizes.

* * *

Big Mileage Records.

ROCHESTER, Nov. 14.—With a mileage averaging nearly 1,000 miles for each individual member the Lake View Wheelmen have far excelled the records of any other club in Rochester and many in New York state. The total mileage of the club is over 125,000 miles. Frank T. Wagner won the handsome gold medal offered to the rider who traversed the most ground during the interval of May 1 to Nov. 1. His cyclometer registered 4,035. W. D. Crittenden entitled himself to another fine badge for the one having the next best record, 3,169 miles being the sum total of his run. W. J. Hanvey, D. M. Leavenworth and a dozen more each covered over 2,000 miles.

Among the members to make century runs for a gold badge for every one made were: C. A. Carpenter, ten; W. D. Crittenden, eight; F. F. Wagner, seven; E. E. Servis, six; G. C. Southard, five; E. H. Vaughan, five; F. T. Barrows, four; C. A. Elwood, F. C. Moyer, C. A. Rockwell, G. V. Southard, W. G. Hanvey, three each; V. J. Chambers, I. C. Edington, W. C. Likly, D. M. F. Leavenworth, H. B. Chapin, two each; C. L. Barton, H. D. Barton, G. A. Brooks, A. L. Beskwith, J. H. Crouch, A. F. Orittenden, C. D. Drake, H. M. Davis, F. E. Hendrickson, H. A. Joiner, C. E. Lyon, F. D. Morgan, H. F. Marks, J. P. Mets, G. J. McDowell, F. T. Servis, W. E. Williams, H. J. Zoller, J. H. Brown, one each.

* * *

Cycling Directors Win.

The Manhattan A. C. Wheelmen held their second annual road races last Tues-

day over the Englewood-Tenafly course. In the ten-mile championship race there were five starters and the finish was made in the following order: R. B. Moneypenny, 43:06; L. L. Betting 45:15; C. M. Coolidge, 48:35.

There were eight starters in the five-mile handicap, the result being as follows:

	Hdcp.	Time.
L. L. Betting.....	50	23:06
R. B. Moneypenny.....	Scratch	21:24
F. H. Howland.....	1:15	28:00
J. B. Anderson.....	30	23:24
U. B. Wooley.....	2:00	26:03
C. M. Coolidge.....	45	25:10

Both the directors of cycling in the M. A. C. surprised their friends and opponents. Moneypenny showed almost championship form. A stiff breeze was against fast time. The time was excellent for the day.

* * *

Parkside Track for Sale.

At a meeting of the board of directors of the Chicago Cricket Club last week, it was decided to sell the Parkside track, grounds and club house to the person making the highest bid up to Nov. 3. There are seven acres of ground and it is worth anywhere from \$50,000 to \$75,000. The club has had a hard time to exist and all because one man wanted to run things his own way. When wheelmen showed an inclination to use the track and pay for it, the directors would not make the least effort to put the surface in even a rideable condition, and when the Chicago C. C. gave a meet the track had to be repaired and the grounds and house put in shape by the members. It is no wonder the track is for sale.

* * *

Off for Record-Breaking.

There was a missionary in Chicago this week; he was after record breaking material. He secured some riders and more promises; the former are on their way south, and the latter the missionary will keep. Two men who are now in the south are subjects of this same missionary, who hopes to put some good times to the credit of his wheel.

* * *

General Race Notes.

The Charleston, S. C., wheelmen are preparing for another race meet.

G. S. Webb, the Aurora cycle dealer, says Aurora may apply for dates in the national circuit next season.

Evansville merchants offered to share the loss incurred at this year's cycle tournament with the cyclists, but were refused. The cyclists expect to recoup losses many times over at next season's effort.

Peoria merchants say next year's tournament will be the crowning effort of their successful career. It will come one week after Chicago and will last a week, four of days racing and two of record-breaking.

The Roseville Athletic Association held a one-mile scratch race over the South Orange Field Club track election day morning. J. C. Woodhull came in first, with E. L. Hartpence a close second. Time, 3:16.

The race meet managers adopted this year the scheme of forwarding prizes won C. O. D. for entry fee money. One local racing man fumed and fretted for two weeks before he could obtain his prize. This is a business-like proposition and should meet with success.

The members of the Kings County Wheelmen have reported the following mileage records up to date: H. Boerum, 2,622 miles; F. Hawley, 2,489; W. A. Thomson, 2,414; O. R. Gurnee, 1,961; C. W. Young, 1,741; W. H. Wells, 1,725; G. Kenney, 1,643; L. D. Phillips, 1,582; D. McLean, 1,482; I. S. Bowdish, 1,276; M.

H. Phillips, 1,060; F. Kenney, 950; J. Foster, 930; W. E. Benn, 926; E. J. Ryan, 914; F. E. Doup, 912; R. W. Steves, 835 and R. F. Hibson, 820.

H. E. Raymond, chairman of the racing board, has notified Carl von Lengerke that he is duly entitled to the first prize in the novice race of the Riverside A. C. of Newark. W. H. Bird, who finished first, was disqualified because he was not a novice. Carl is much pleased, as it was his first real race.

The East Orange Cycle Club races took place over the South Orange Field Club track election day. The times were poor, owing to the high wind: The events were:

One-mile scratch—J. E. Clark, 1; George Dover, 2; time, 3:16.

One-mile handicap—George Lefferts, 90 yards, 1. H. W. Smith, scratch, 2; time, 3:10.

Five-mile handicap—J. E. Clark, 400 yards, 1; Charles Lefferts, 2; time 22:28 1-4.

The fifteen-mile road race of the New York A. C. Wheelmen, held on election day over the roads around Morris Park, was won by Theodore E. Belts. Time, 53 min., 45 sec. James H. Hanson was second, and Ernest Thorp third. Belts road a Keating light roadster, which stood up well, and the rider was so delighted with it that he bought it on his return from his victory.

The Boston Athletic Association will have a hare and hound chase on bicycles on Thanksgiving day. Handsome prizes are offered, and the race is open. The chase will be run inside of a ten-mile radius and some great sport is expected. The affair last year was a grand success and a large number participated, the trail being well laid all the way to where the break for home was made.

Chicago Cyclists Elope.

The announcement Wednesday morning of the elopement and subsequent marriage of two prominent Chicago cyclists caused no end of talk among wheelmen. George G. Greenburg is captain of the Columbia Wheelmen, a member and director of the Minnette Club, and holds a good position with S. D. Childs & Co. Miss Lucy Waugh, that was, but who is now Mrs. Greenburg, is the daughter of Mr. and Mrs. John E. Waugh, 1174 Jackson Boulevard. Both the young people are centenarians of note. They had ridden together a great deal and acquaintance ripened to love. Monday Miss Waugh went on a visit to her cousin; Tuesday morning she met Greenburg and they went to the Cathedral church, SS. Peter and Paul, Washington boulevard and Peoria street, where Rev. George De M. Wright joined them in marriage. Then they went on a visit to Aurora, but will be back some two weeks hence, when they will commence house-keeping at 99 Whipple avenue. It was known the young people were to be married, but the elopement was a great surprise.

The Philadelphia Cycle Show.

Everything is going along swimmingly in connection with the coming cycle show under the auspices of the Associated Cycling Clubs of Philadelphia. Secretary Baker reports that applications are rapidly coming in by mail and telegraph from all parts of the country, and that the prospects are also good for a complete display of everything in the way of pneumatic-tired sulkies.

One thing is sure, and that is that the show will be the most representative one yet given, and that any maker who is not included will sooner or later regret the fact.

The exhibit will be largely advertised in every conceivable way among agents all through the country, and the attendance of this class promises to be very large.

DEALERS SHOULD CONSULT THEIR OWN INTERESTS.

THE POINT AT ISSUE IS IMPORTANT.

20-Pound Rudge Racer (Red Rims).

RUDGE CYCLES FOR 1893.

WHY
DEALERS
WANT
THEM
AND
BUY
THEM:

BECAUSE they are an old-time-tried make; popular everywhere, and give satisfaction to their riders.
BECAUSE the bearings are nearest perfection and are known to be superior to all others.
BECAUSE they are light, graceful in outlines, strong and durable.
BECAUSE the percentage of breakage in RUDGE cycles is less than in other makes.
BECAUSE they are made in America from finished bearings, forgings, etc., direct from the parent factory, under the most careful supervision.
BECAUSE we sell them on favorable terms.

Ask repairers, who have occasion to overhaul some of the RUDGE ordinaries sold in this country eight or ten

years since, what condition they find the bearings in. They will tell you they are best and superior to all others.

We would be glad to correspond with parties desiring to have exclusive sale of The World Famous RUDGE Cycles. Catalogue ready. Correspondence solicited.

ROUSE, HAZARD & CO., - 89 G Street, - PEORIA, ILL.

EXCLUSIVE MANUFACTURERS AND IMPORTERS FOR THE UNITED STATES.

RECORDS AND TRADE IN ENGLAND.

American Orders Keep the Manufacturers Reasonably Busy.

COVENTRY, Eng., Nov. 5.—Spite of the lateness of the season Osmond and Schofield have been staying on at the Putney track in the hope of getting some records for the Whitworth, and in this they have been successful. Last week and the week before Schofield succeeded in beating Zimmerman's Herne Hill quarter and half-mile records, and also took the three-quarter-mile record as well. There has been a row over the time-keeping, some people averring that as on the first occasion the times were not taken by an N. C. U. timekeeper they could not be accepted. But this is all bosh; no fewer than three timekeepers—including E. Plummer, late of New York and now on the outside staff of the *Sporting Life* in London, and H. Hewitt Griffin, the handicapper—held good watches and they practically agreed. Under these circumstances it is not probable that the N. C. U. will disallow the records—at any rate, if it does so it will not be on the score that it questions the time-keeping.

Except in the trade there is not a vast deal doing, and there would be little activity were it not for a few continental and American orders and the preparations for the coming shows. Last Monday several firms whose factories have been practically closed during the last few weeks, began again, but there are still plenty of idle hands. In our experience of four years in Coventry I have never seen so many of the men out of work as there are at the present time.

RETURNED FROM THE STATES.

Of the English makers and their representatives, who lately flocked over to the states in such large numbers, several are

already back. Early this week I met William Starley, of Starley Brothers—"Bill" Starley, as he is known throughout the trade. He is exceedingly pleased with the result of his visit—in fact declares that his baggage was so large with orders that the steamship people wanted to charge him with excess for it. During his absence his firm has been by no means standing still. It is now fully prepared for making the whole of the 1893 wheels with the new tubular steel fittings which are to take the place of castings and stampings. In their works one day this week I was shown a sample set of these fittings which, including the saddle pillar, weigh less than three pounds complete. John Starley, one of the brothers, is now riding regularly every day on the road a machine made in this fashion. It has a full roadster frame and weighs only nineteen pounds. The firm is confident that by using Fleetwood tires instead of Dunlops, and by taking out a little bit of weight here and there, it can reduce it to seventeen and a half pounds. I tested it very freely and there was not the slightest indication of give about it anywhere. Like everybody else, Starley Brothers are experimenting with a front-driven safety. As I am promised an early trial of it I shall hope to give the result in a subsequent issue of the REFEREE.

J. I. Warman has been back in Coventry a week. The annual meeting of Warman & Hazlewood, limited, takes place on Monday, when it is anticipated that a dividend of 10 per cent. will be declared and a substantial balance carried forward. The past season's trading with the firm has been a very sound and steady one, this being in a great measure due to the increased and satisfactory business done by means of Mr. Warman's depot in Chicago. He has been busy during the past week in getting out some

special patterns for next year's American market.

C. V. Pugh, of the Whitworth Works Cycle Company, arrived home early last week and lost no time in setting about putting things in order for the coming seasons. The firm has made its plans for a big output next year, and knowing the thorough way in which they do everything, I have the greatest confidence in their future success. They don't make as big a song about it as some people, but all their chief men being practical riders, both on road and path, they have a quiet way of digging right down to the bottom of things, finding out what is best and what the public wants, and shaping their methods accordingly.

Mr. De Lattre, the manager for William Middlemore, the famous saddlery maker, called on me this week with specimens of his next season's saddles. These are being made in a very neat brown leather which, I fancy, will be all the rage. Wherever he shows it, Mr. De Lattre books a big order—a very substantial testimonial to its value. Middlemore's is also turning out a very handy little pneumatic pump carrier. It is easily got at and adjusted, and is already selling very largely.

The Pneumatic Tire Company has done excellent business this year, and I am told on the best authority that it has already booked an immense number of orders for next season. However this may be, I know for a fact that it is already working at its Coventry factory up till 11 o'clock at night. I hear also that several rubber firms have agreed to pay the company royalties on all the pneumatic tires they send out. The £1 shares at present stand at about 7 1/2, and it is probable that at the end of the year a dividend of 30 per cent. will be declared. Immediately after the Stanley

show Harvey Du Cros, Jr., the manager of the business at Coventry, will leave on a flying visit to America. Although quite young he is one of the best business men in the trade. He is, moreover, an intelligent and interesting companion, with plenty of life and fun.

Another change has been made in the firm of Flavell & Co., Coventry, which will henceforth be known as the Reform Cycle Company. A. E. Flavell, the founder of the business, who had the management of the workshops, has retired and taken the position of manager to Loyd, Read & Co., where his practical experience and active energy will be of considerable service.

"CAN'T MAKE A MISTAKE."

FINDLAY, OHIO, Aug. 27, 1892.

MARBLE CYCLE MFG. CO.:—While W. C. Munchausen, of Findlay, O., was training on his new Smalley Road Racer he collided with a freight train drawn by a balky locomotive. The Smalley had the upper rod of the frame and also the saddle post slightly bent and indented, and three spokes slightly loosened by a stroke from the piston rod, but for running purposes it was absolutely uninjured. Within twenty seconds after the accident its rider was pushing it at full speed to test the bearings and riding hands off to see how it lined up. It ran perfectly satisfactorily every way; but the freight train—well, there wasn't any freight train, for like the boy who "stood on the burning deck," "there was a burst of thunder sound: The train, O where was she? Ask of the winds that far around strewed freight cars o'er the lea." The engine wheel that struck the bicycle was buckeled in seventeen different ways and looked like a stale ginger-bread man, and the whole train looked like an Ashtabula wreck. The other wheel was tied in a double bow-knot and the entire crew was killed. If I had needed proof that Smalleys are good enough I should be convinced, and I am sure that all Smalley riders will join me in saying they are better than the BEST. "You Can't Make a Mistake in Buying a Smalley."

THOS. C. MUNCHAUSEN.

In justice to Mr. Munchausen it should be said that he is one of our 7,000,000 agents, and knows what he is talking about. We shall spring more testimonials from our other 6,999,999 agents as the season progresses. Meanwhile our inducer, Col. Geo. K. Barrett, is talking business to responsible agents, and allotting territory.

MARBLE CYCLE MANUF'G CO.

Factory: Plymouth, Ind.

Business, naturally, has been dull on Wabash avenue for some days. Our artist has humorously depicted the result.

Banquet to Tyler.

Harry C. Tyler, the prominent Springfield racing man, was tendered a banquet by his clubmates last week. D. E. Miller, president of the club, presented Mr. Tyler with a watch, chain and charm in recognition of his excellent work in the interest of the club. The watch cost \$300. The outside of the case bears the monogram "H. C. T.," while the inside has this inscription: "Presented to H. C. Tyler by the Springfield Bicycle Club, 1892." One side of the charm is engraved, "One mile, 2:08 4-5." The reverse side bears the emblem of the club—wings and scroll—in relief, the scroll bearing the initials of the club, thus: "S. B. C." Mr. Tyler will shortly open a Springfield agency for the Union Cycle Company, whose wheel he rode with so much success the past season.

New York Press Cycling Club.

A meeting to reorganize the New York Press Cycling Club was held last Friday afternoon at the offices of the *Sporting Times*, 240 Broadway. At the meeting W. E. Hicks was temporary president and E. Franks temporary secretary. Those present were James E. Sullivan, W. E. Hicks, G. M. Neiden, E. R. Franks, H. S. Quinn, E. C. Carter, E. H. Baynes, W. J. Morgan, L. C. Boardman, F. R. Maderia and L. Ketcham. A committee on nomination of officers was appointed, consisting of Messrs. Carter and Morgan. This committee will report at the next meeting, which will be held at the same place, at 1 o'clock, Friday, the 18th inst. The meeting then adjourned.

Cycle Nomenclature.

Winter is coming, evidently and truly—since the old, old question of cycle nomenclature has again cropped up. It comes with the chrysanthemums, as a rule, and lasts till the snowdrops. It has

the same well-known features as of old; it says we shouldn't call the ordinary the ordinary, because it isn't ordinary now; and that the word safety is a misnomer, and "geared ordinary" is loathsome. It does not suggest any change, which is just as well, since a change would not be at all likely to be taken up. The terms in use may be illogical, but they have acquired a definite meaning, and do their duty effectually enough for all practical purposes. So long as a man knows what another man means by "safety," "ordinary" and "front driver," the titles may safely be left in peace.—*Irish Cyclist*.

The Colored Rim Fad.

There are fads nowadays among cyclists and cycle makers. Just now the colored rim seems to be all the go. When the Pope Manufacturing Company brought out the blue rim the scheme took and Columbias are known as "blue rims." It is not a bad idea, either, for one can easily tell which wheel crossed the tape first and as a rule the rider's mount is known. For next season several makers will adopt the colored rim scheme. Here are some already announced:

Columbia—Blue.
Rudge—Red.
Quinton Scorchers—Bright Yellow.
Sanger—Silver.
Smalley—Variegated.
Keawood—Yellow.
Ariels—Green.
Fowler—Black.

Woman's Province in Wheeling.

Just how far woman's province in wheeling matters may safely be permitted to extend itself is a matter for growing consideration. That the sport is destined to become more popular among the fair sex is evident, and writers are alarmed for fear that the fair riders may undertake record breaking. Nothing could so quickly kill the pas-

time as such a course. A woman's mission is to dress appropriately, with as much originality in her costume as may suggest itself without being offensively conspicuous, decorate her wheel with as much artistic taste as she is capable of, ride as gracefully as she possibly can, and depend upon her male escort to do the rest, even to taking a header deep into the abyss of devotion on her behalf.—*St. Louis Post-Dispatch*.

Notes.

He thought he could ride, but he couldn't; Friends told him to stop, and he wouldn't. He entered a race, And met with disgrace For trying those things that he shouldn't.

—*Scottish Cyclist*.

The Blue Jacket Wheelmen is the title of a Greenville; S. C., club.

Seven of the most prominent preachers of Rockford, Ill., now ride bicycles.

Hasting, Neb., has a fine quarter-mile track, the best in the state, it is said.

Paris is to have a new track, to be constructed of wood at a cost of \$10,000.

Cycling maps in Belgium are printed on rubber, so that they may be read in in the rain.

According to Scheltema—Beduin cement tracks are safe from slipping if a goodly quantity of sand is mixed with cement.

Lacaille thinks the geared ordinary much superior to the safety as a road mount, though perhaps not as fast.

A plate-glass track is the latest idea in order to keep, or, rather, restore England to its cycling supremacy.—*Wheeling*.

The use of the bicycle is becoming quite general in Japan, reported to be the bicyclists' ideal touring country. The Gormully & Jeffery Manufacturing Company has already shipped a number of Ramblers to that country and has re-

cently placed the agency for the entire Island in the hands of H. MacArthur & Co. of Yokahama.

R. J. McCreedy does not think the geared ordinary will ever be in great demand. He believes there is more hope for the front driver.

Mr. McSherry, of the American Bicycle Company, has built a twenty-five-pound ladies' wheel. It is strong enough to carry a heavy man.

Pneumatic-tired omnibusses have proved successful in Glasgow, Scotland, and as many as two dozen passengers have been carried in one at once.

Schofield has been making some good records in England, his flying quarter being 29 2-5 sec.; starting quarter, 31 4-5 sec.; half, 1:02; three-quarters, 1:38 2-5.

Ed. Grath, of the Pastime A. C., St. Louis, rode twenty-two miles over frightfully poor roads without a dismount. The course was from Ballwin to St. Louis.

A stock company has been formed under the title of the Bicycle Canopy Company, with a capital of \$60,000, to manufacture an ingeniously-constructed bicycle umbrella.

President Kerrison, of the Press Cycle Club, has been elected chairman of the Inter-Cycle Club, of Boston. All the clubs around Boston are in good financial circumstances.

In England and Scotland riders of pneumatics are frequently brought to grief through having their tires punctured by the thorns on hedge clippings, thrown into the road.

On Jan. 25, at St. Paul, a convention is to be held to discuss the question of good roads, to which the Minnesota division will send ten delegates. The movement has been organized by Chief Consul A. B. Choate.

WAIT AND SEE

Sorry our cuts aren't ready.  Hope they will be next week.

"IMPERIAL" HISTORY

—SECOND CHAPTER.—

NOW IT CAME TO PASS—

That "IMPERIAL" Wheels from the beginning caught the popular fancy and became fashionable. The experience of their makers during the past season more than demonstrated this, inasmuch as during the first two months of the year they had contracted with representative dealers throughout the country for every "IMPERIAL" that they could build during the year. They made no effort to further increase their sales, preferring to take care of their early trade.

The fact that this output was well up in the thousands, demonstrates in the most practical way, the superiority of the goods.

The already immense factory had been considerably enlarged from time to time to keep pace with the demand for "IMPERIAL" Wheels, it finally becoming necessary to erect a new seven-story addition. We may safely say that the output of "IMPERIAL" Wheels will be more than doubled during the coming season.

"IMPERIAL" Wheels are the recognized leaders. We note with pardonable pride, the many "IMPERIAL" ideas adopted in the 1893 models of other makers; verily these "IMPERIALS" have been most satisfactory in the past—they will excel themselves in the new line for 1893.

THE LINCOLN'S LATEST.

It Was Called a Japanese Smoker and a Rice-Eating Contest Was Held.

Gaily and artistically decorated was the Lincoln Cycling Club's pretty home, at 1 Ogden Front, last Saturday evening. The occasion was one of those novel smokers which have done so much to spread the Lincoln's fame abroad, and that are somehow always a grand success. On this occasion it was a Japanese smoker. The members and friends were not rigged out as Japs, but the club house was distinctively Japanese from the sign on the door to the souvenirs carried away. Every light in the club house shone through a Japanese shade, and much of the light was cast by great festoons of Japanese lanterns in the halls and parlors, where was spread a table laden with good things, *a la* the Jap also. The napkins and other et ceteras smacked of the little isle. In the eating respect the Lincoln's differed. The eating came first and the speaking afterward. When Toastmaster Erwin called the assembled guests to order over sixty were comfortably seated. Japan and its

past history was learnedly discussed by the cycling scribe from Johnson's Corners, and followed by an attack on the delicious viands. Ice cream was served in wooden plates, shaded by Japanese umbrellas of miniature size. Pipes lit, one after another was called on for a speech, song or story, and nobly did they respond. Henry Mayer gave his rendition of Italian opera, and Louis Block, of Denver,

praised the Lincolns, the smoker and Chicago generally, promising to inculcate Lincoln's ideas into cycling gatherings in his far western home, where

every league member is now striving to gain more members, that a concerted stand may be made and a strong front taken next season toward securing the L. A. W. meet for 1894. His speech was a splendid effort and secured the co-operation of every member present in aid of his mission. It was with a great deal of interest that two scores of cyclists gathered around the table, while a score more engaged in a rice-eating contest for

a prize. Chop sticks were used scientifically and D. B. Southern won handily. Each departing guest carried with him a Japanese bug as a souvenir, and voted the Lincolns quite up to the standard established last season.

Smokers at Buffalo.

BUFFALO, Nov. 14.—On Friday of last week the Press Cycle Club held its first smoker of the season. It fairly took the place by storm, as it was a gathering of tramps and rag-tag-and-bob-tail; in fact, the whole of vagabondia was well represented, and many of the "get-ups" were very artistic. A supper finished the festivities, and as it was so great a success another will be held.

Saturday evening the Ramblers B. C. held a novel form of entertainment, and it was a most gratifying success. According to agreement made before election, the Democratic part of the club was constituted the audience and the Republican contingent became the entertainers. After the grand march, which took place in the large gymnasium, Dia Lewis and H. C. Martin held a lively debate for a few moments upon the whys and wherefores of the campaign, in which Mr. Martin got rather the worst of it. There was a programme of great length and variety. The members of the club's team were presented with very handsome medals in commemoration of their victory in the Rose road race. This team consists of W. F. Buse, E. F. Weinig, F. E. Klipfel, G. G. Buse, F. C. Fuhrman and B. Cleveland. A fine luncheon tempted the appetites of the people present, and thus ended a most successful evening's entertainment.

Smokers are now in order and all the clubs are right in line with them. The Comrades will have one on this Saturday evening, at which they promise the participants a jolly good time with music, smoke and lunch. The Wanderers follow with one for next Saturday and after that the Iroquois will have one.

The election returns were received at the club house of the Buffalo B. C., and an excellent luncheon followed.

The Women's Wheel and Athletic Club

is doing good work in the cycle line, and making many converts to wheelodom among the finer sex. All through the season this club has had runs to interesting places in our vicinity, where much that was useful from an educational standpoint was acquired. Many prominent women are included in its ranks and the society is proving its utility daily.

WILLIE DUNN.

In and About Chicago.

Thursday evening last was ladies' night at the Lake View club.

Ehlert, the old-time racing man, is pitching indoor ball for the Spalding team.

Interest is being aroused in the Plzen Cycling Club, and the indoor ball team of last season is being reorganized.

The annual smoker and turkey raffle of the Plzen Cycling Club occurs Thanksgiving eve.

Last Friday evening the *Æolus* Cycling Club defeated the Irvings at Irving Park by a score of four to three.

A. J. Street has formed and will manage an indoor ball team in the Illinois Cycling Club. The team is now open for games.

Wednesday evening last the Chicago Cycling Club's first party of the season occurred at Rosalie hall. All the efforts of former seasons were eclipsed. The hall was crowded.

The *Æolus* Cycling Club indoor ball team has been tied for the past two seasons for first place in the Northwest League, losing the '90 championship to the Arions and the '91 championship to the Shandon Bells by narrow margins in both instances.

At the Ravenswood Cycling Club, Wednesday evening, a progressive euchre party was given. A score of tables were occupied. This was one of the winter series of progressive club parties, for which handsome trophies have been offered for the best average of the season.

Thursday evening of this week the Lincoln club's regular team played a team composed of members of the same club who had never handled an indoor ball or bat. A. J. Marrett captained the latter team and had Herrick and Guinea as a battery and such men as Servoss, Goss, Bigelow, Morris, Hauselman, Pagan and others in the points. By request, the score is withheld.

The Wicker Park Cycling Club of 46 Potomac avenue, members of the Northwest Indoor League, has the following indoor team: Leopold Karpen, manager; Charles Hamen, captain; Harry Olsen, Henry Johnson, F. Klemp, August Knockmaus. Oscar Swanson, M. Quigley, William Karpen, John Owens, Steven Barry, O. Nottleman and William Breyer. The team has been formed just recently, but contains many excellent players.

About the Country.

Dr. V. H. Hobson of Louisville, Ky., will be married to Miss Reed on Dec. 21.

The Columbus (Ohio) C. C. is arranging a series of smokers and card parties for the winter.

Tuesday night the Peoria B. C. gave a dancing party at the club house, and on the 15th a card party will be held.

Several members of the Dayton (Ohio) B. C. have organized a vocophone band. There will be sixteen pieces in the organization.

Tuesday night the Des Moines (Iowa) C. C. opened its club rooms and dance hall in the Trustee block, West Sixth and Locust streets. The reception lasted from 8 to 10 o'clock, and then dancing began,

the Iowa State Band furnishing the music. Some 500 invitations had been issued and as a result there was a large attendance.

The Lockwood C. C. of Jacksonville, Ill., has issued handsome invitations for its Thanksgiving dance, to be held at the Fifth Regiment Armory. Dancing will begin at 8:30, music by Gehrig's full orchestra.

On Thursday evening of last week the members of the Magnolia Cycling Club of Houston, Tex., and a number of their gentlemen friends met at their new quarters and participated in a stag euchre party and formally opened the rooms. The aim is to make of the new club the argest of its kind in Texas, both as a social and cycling club, and the members seem determined by united effort to attain success.

Building Special Wheels.

A. H. Radell, 494 East North avenue, Chicago, is preparing to manufacture, in a small way for the present. He turned out a twenty-six-pound ladies wheel this week. This machine has twenty-six-inch wheels, forty-three-inch wheel base, and a novel frame. It is a square-built frame, two bars diverging from the base of the long steering head, one joining the frame just above the sprocket wheel, the other just below. The handle bars are handsomely designed. The front fork has considerable rake and the sprocket wheel being well forward of the rear wheel, the long wheel base is equalized. The frame is all tubing and no forgings are used, the joining being by the flash process. This is probably the lightest ladies' wheel in this country. The tubing in manufacture, is liable to ind-nation in this process, but Radell's wheel is perfect in this respect. His gentlemen's wheel weighs but twenty-four pounds and is made by a similar process, all tubing and flash joints. The wheel-base is forty-eight inches, being equalized by the distance between the crank hangers and rear wheel. The frame is very deep, the seat post being entirely done away with and the seat attached to the top bar of the frame, which extends a few inches back. Mr. Radell manufactures only to order and has orders for several machines for next season.

Coasting a la Bicycle.

The bicycle sled here sketched is a novelty which will commend itself to lovers of the exhilarating sport of coasting. The machine consists of a front and rear runner in the same plane,

the backbone between the two being hinged so as to allow the rider to guide and balance the sled. Connected with the handle is a brake lever, which controls a pair of dogs that can be thrust into the snow or ice, thus retarding the movement of the machine.—St. Louis Republic.

The pneumatic tire problem has not been solved, and never will be until the bicycle riders thoroughly understand the use for which such tires were designed, and learn to put a just limit upon the capability and durability of a sensitive air cushion, which is subjected to constant and severe pounding over uneven surfaces, and smooth surfaces, too, as a matter of fact,

Our 1893 Model, THE FOWLER

LIGHT WHEELS—SPRING FRAMES.

A Correspondent Thinks the Light Wheel Idea Totally Wrong.

CHATTANOOGA, Tenn., Nov. 8—*Editor Referee*.—While reading that valuable paper, contributed by such high authority as J. K. Starley, I wondered how many of your readers would carefully consider it, how many would heed the valuable advice contained in the article. I wish to endorse Mr. Starley's views on the whole and particularly on two points, weight and spring frames. *Re* the former the gentleman says: " * * * There is, however, a medium to all things, and I am strongly of the opinion that, although for a light, expert rider, who is within easy reach of a repair shop, a machine can be made that will carry him over ordinary roads safely to weigh not more than thirty pounds; that a similar machine, weighing thirty-five pounds, would be found a better weight in the end, and for ordinary touring purposes, and for riders over middle weight, a machine weighing forty pounds would not be too heavy." It is a well-known fact to every close observer and to every manufacturer that '92 machines were too light, or too something, as there never has, in the history of the trade, been so much trouble, so much dissatisfaction as during this year—trouble with light wheels, and consequent expense and grumbling on the part of their riders; dissatisfaction from those who bought heavy wheels, not because of break-down, but because they were "too heavy."

CRYING FOR LIGHT WHEELS.

And yet, in the face of all these facts, most agents, knowing the trouble that is staring them in the face for '93, are crying for lighter wheels, lighter than thirty pounds, lighter than twenty-five pounds, and even less than twenty pounds. I have seen men using twenty and twenty-two pound racers on the road here in the south! What will be the result? Simply a demoralization of the trade. Manufacturers cannot make twenty-five or thirty pounds of steel hold riders on the average roads, and those who buy them will condemn the maker, try another and another, until all have been found wanting. In many cases the wheels have been purchased on installments, \$30 to \$50 down, and before the next payment is due the rider has trouble, turns in his wheel, a second-hand wreck, and tries again, with like result. Agents are forced to pay for them or quit the business in debt to the manufacturer, who has lost his agent, his trade and his reputation in that locality.

ADVOCATES HEAVIER MACHINES.

For the good of all concerned, let us ride heavier wheels, except for racing, or cease advising our friends to get light ones. If you want a racer, there are plenty of them, but confine their use to the track, or bear the loss without a murmur. All wheels, from eighteen to sixty pounds in weight, and in price from \$35 to \$175, are guaranteed. Guaranteed against what? Defective material and workmanship, of course, and the maker claims the right to be his own judge. Those whose wheels "break down on a smooth road" (after having been subjected to severe tests on rough

ones, and oftentimes over curbs, ditches and by reckless coasting) rarely get a repair "no charge." Some peculiar bend or mark tells the expert how the wheel came to grief. It would be impolitic and unwise to contradict the owner after he had committed himself; yet a man of experience knows, in nine cases out of ten, that he's a liar.

SPRING FRAMES.

Mr. Starley says: " * * * I think when the additional advantage of a spring is obtained in such a manner that we will be still more isolated from the vibration set up by the uneven surfaces of the roads, such a machine will be regarded as the best. * * * " The writer, after a thorough test of spring frames for four years, has been trying to ride a light rigid frame of the same make, and admitted by all to be second to none, and he is firmly convinced that for any use except the track, or roads equal to tracks, the spring frame is superior, and he can ride more miles, with less fatigue and greater speed, than on a rigid. That, too, with ten pounds more weight in the machine. Those who believe the acme of comfort is reached in a pneumatic are as much mistaken as the man who thought a solid

THE MONARCH LIGHT ROADSTER—"COPPERPLATE."

steel rim on the velocipede equal to rubber tires, or solid tires with rigid frames equal to same with springs, and so on up to pneumatics.

Many seem to think, because one "western maker" has added a variety of light rigid frames to his line of spring frames, that spring frames are doomed. In this they are mistaken; that particular maker has built up a trade excelled by few concerns in the world, and a reputation second to none, extending to every cycling country on the globe. What did he do it on? Spring frames of sufficient weight to keep away from repair shops. He has doubled his capacity and increased his business by making a light wheel suited to club and racing men, and at the same time he is preparing to build more spring frames than ever. There is a market for them and he knows it. It's a safe market, too. The writer commends the above to "Mitchell" of South Dakota, in reply to his recent article in *Sporting Life*. DONOVAN.

TRADE IN KANSAS.

Regular Prices Seldom Obtained—Cheap Grades Most in Demand.

All aboard! Not a pleasant sound to an old traveler, that. It means deprivation of his usual comforts; a cutting off for a time of the little things to which he is accustomed, the many small conveniences and knick knacks that have become necessary to his comfort, and to

the proper enjoyment of this none too comfortable or enjoyable existence. It means the complete surrender of his life, property and personal liberty, for the time being, into the hands of a more or less (generally more) chuckle-headed and irresponsible railroad employees. But alack and alas, the grocer and the disciple of St. Crispin must be paid and therefore the traveler goes forth. In St. Louis the cycle business, as usual is very dull. There is a certain amount of business in second-hand and cheap machines. The Meacham Arms Company is selling the bulk of the last named. The Knight Cycle Company reports a poor season's business and will continue to handle the Stover line. Laing and Jordan think that they are satisfied each with the trade he has had in '92, and Snitjer still puts his faith in the Columbia and Warwick. Percy Stone is in the insurance business and doing well. He says that he will race next season. The Simons Hardware Company is branching out and will handle a large territory next season. At Kansas City trade is also dull. The honors for '92 seem to be pretty well divided between Wamac and Schmelzer & Sons, Wamac with the Liberty, the Imperial, and a cheap line, and the other firm with the Columbia, the Remington and the Western Wheel Works' goods. The Midland Cycle Company reports a fair business, and Ellis, the old timer, says he has nothing to complain of.

A GOOD CYCLING TOWN.

Wichita, the traveler found, a veritable paradise for wheelmen. The city is a finely built, well equipped municipality, with wide, well shaded streets as smooth as a floor and as a level as a skating rink. Many of them are paved with asphalt and the natural soil gives to unpaved thoroughfares a surface like a race track. Several of the better makers are represented in the city, but the bulk of the machines sold are of the cheap or medium grade variety. The traveler met several very pleasant gentlemen riders in the city; found there were nearly 500 cycles there and that the prospects for '93 were good. In Kingman the traveler met the representative of the Gormully & Jeffery Manufacturing Company from Hutchinson, who had several machines on exhibition and who expressed himself as well satisfied that there was a future for bicycles in Kansas, Jerry Simpson to the contrary notwithstanding.

THE ELECTION AFFECTS TRADE.

The traveler wishes to state, however, that all along there is a feeling of uneasiness among merchants and dealers in all lines of goods. The recent change in the political policy of the country is met with a deal of distrust; dealers are afraid to buy, and if it were possible for the incoming administration to change the complexion of affairs at a moment's notice, it would be an utter impossibility for any drummer to sell a bill of goods—

no one would buy. The traveler finds that in the small towns of the state the systematic policy of cutting prices on high grade bicycles has obtained almost universally. He has yet to see a single cycle for which the owner has paid full price, and particularly is this policy followed in Kansas City, and the result, as usual, is very bad. There is a strong demand in the larger cities for very light bicycles, and the general knowledge which is shown regarding the construction and equipment of a first-class machine among riders is astonishing. It is many years since the traveler was a knight of the grip, and in his day the drummer was a missionary; now, however, he may often learn from his customer. This is as it should be and the trade can congratulate itself on the fact.

LA COTE MAL TAILE.

THE McCUNE CYCLE COMPANY.

Its Factory in Perfect Running Order and Samples Out.

A REFEREE representative journeyed to Everett, one of Boston's suburbs. Away down the railway track can be seen a large brick building and the sign, "The McCune Cycle Company." Alongside the factory is a large fence, and it was quite noticeable that Col. Pope's fence artist, Drew, had been there, for it was not difficult to notice the six-foot letters which told of the Columbias. Drew, however, says the Columbia was there first. The factory is very complete in all details, and the wheel now being made as well. Unfortunately J. B. and W. E. McCune, manager and secretary, respectively, were away, the former being on the road with a sample wheel. A general tour of the factory and an inspection of the wheel in its various stages of construction leads one to believe that the great shop, good material, pretty lines and radical improvements in the wheel, will make the McCune production a great success. The company was organized June 3, 1892, under the laws of the state of Maine, with a capital of \$100,000 and the following board of officers: Charles Read, president; William H. Keating, vice-president; William E. McCune, secretary and treasurer; and J. B. McCune, formerly of the Union Cycle Manufacturing Company, general manager.

VERY LIGHT WHEELS.

The wheel made by the McCune company is probably as light as any on the market, its weight, all on, being only twenty-eight pounds, and stripped, twenty-six and a half pounds. This light weight is secured by a liberal use of aluminum, of which the mud guards, brake and small attachments are made. Large tubing is used in the frame, three-quarter-inch being the smallest and one and a quarter-inch the largest. In the crank-axle bearings seven-sixteenth-inch balls are used; in the rear hub, three-eighths; front hub, five-sixteenths. The bearings are dust proof and no oil is necessary in those of the rear hub or crank-axle. The bearing consists of counter-sunk shells. After the balls are set in the shells a steel washer is forced inside of the forging and up against the shell. Then a cloth washer an eighth of an inch thick is placed on the axle, so as to have it come against the washer; another steel washer is crowded into the shoulders of the cone, so that when the bearing is adjusted the cloth washer is pinched between the two steel washers. The whole is overlapped by the cup or forging that receives the shell, making it an impossibility for dust or mud to get in at the top or end of the bearing. When the axle is taken out the washer that sets against the shell remains in place and thereby keeps the balls from

ATTENTION, ROAD RIDERS!

PRIZES FOR THE SEASON OF 1892.

ENTRIES CLOSE CHRISTMAS DAY.

As we have given many **PRIZES** for track and road races during the past season, it seems only fair now that Christmas is approaching to offer something for the hard-pounded road riders. If this experiment succeeds we will make a desirable list for 1893, which will be announced later on.

FIRST PRIZE, \$25.00 To rider who has ridden the greatest distance on M. & W. Tires without change of tires or any important repairs.

SECOND PRIZE, \$15.00 To rider making greatest number of Centuries on one set M. & W. Tires.

THIRD PRIZE, \$15.00 To rider making most meritorious single ride, weather, condition of road and distance considered.

FOURTH PRIZE, 1 Set Road Tires To each second and third best in above.

JUDGES: N. H. Van Sicklen, C. P. Root, L. J. Berger.

CHEQUES FOR CASH PRIZES WILL BE MADE TO ORDER OF N. H. VAN SICKLEN TO BE EXPENDED IN ANY WAY THE WINNER MAY CHOOSE.

WE ARE TO HAVE THE PRIVILEGE OF PUBLISHING THE RECORDS UNLESS RIDER STIPULATES TO CONTRARY.

FILL OUT CAREFULLY AND MAIL TO US.

MORGAN & WRIGHT, CHICAGO.

coming out. Both wheel bearings are arranged in a similar way.

OTHER GOOD FEATURES.
Each axle can be removed without a ball coming out. Both sprocket wheels are detachable. The crank key is made so as to need no driving, and if a hammer should be used it is impossible to strip the thread. The frame will be enameled in maroon and the bright parts nicked, but special finishing will be made to order. All on, the wheel will retail for \$160; stripped, except brake and coasters, \$150; completely stripped, \$140. The company expects to make 2,000 wheels and will run with a force of 100 men.

RECENT ENGLISH INVENTIONS.
New and Useful Designs in Frames, Tires and Wheels.

These abstracts are prepared immediately after the complete specifications are published by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the unmentioned applications may, at any time within two months from Sept. 28, give notice in the prescribed form of such opposition.]

No. 16,655. W. H. Marriott and M. W. Swainston's "Improvement in the construction of safety bicycles and other front-steering velocipedes." Sept. 26, 1891.—This invention relates to the steering-head and has for its object the reduction of wear and weight and increased steadiness of running. In a safety bicycle or front-steering tricycle constructed according to this invention, the handle-bar (H) is attached to an open-ended tube (T), along which it can be adjusted if required by the lug C. This tube (T) is fixed at its lower end to the fork crown (F). Through the tube passes another tube or rod (R), which is a little longer than the tube (T), projecting both at the top and bottom thereof. This inner tube or

rod (R) forms the front part of the frame and its ends are fixed to the upper and lower backbones (S and S'). The outer tube (T) with the handle bar and front fork thereon are free to turn about the inner tube or rod (R) when steering, suitable ball or other bearings being provided at the top and bottom of the outer tube. The upper bearing is by preference provided with the adjusting cone. As a modification the fork sides may be produced or two other tubes may rise from the fork crown and be connected by a bridge carrying the top bearing in the same position as the single tube T carries it. In this case the handle-bar may be provided with two stems telescoping in the two tubes carrying the bridge.

No. 19,707. J. Brittle's "Improvements in spring frames for cycles." Nov. 13, 1891.—The object of this invention is to provide a simple spring

connection between the front and rear portions of the frame in such a manner as to preserve the distances between the saddle, crank axle and rear wheel axle. The rear portion of the frame carries the saddle pillar and the bottom bracket; the front portion consists, in addition to the usual fork and head, of a portion (E G) projecting

backwards and extending downwards behind the steering wheel, such backward portion being preferably formed of a triangular shape of which the other member is horizontal. The rear framing is connected to the forward framing by means of a stop joint (L) and a tension spring or springs (M) at the bottom. The lower end of the member (G) of the forward framing is carried backwards horizontally and forms a slotted end (R) between the sides of which the lower portion of which the lower portion of the vertical member D of the rear frame passes, this arrangement tending to maintain the lower portions of the frame in the same plane while allowing of the vibrations of the framings in relation to one another. As a modification the forward and rear framings may be pivoted together at their lower end and a compression spring or springs placed between their upper ends.

No. 20,051. R. W. Smith's "Improvements in or relating to velocipedes." Nov. 18, 1891.—The

chain wheel has two lugs (F) upon its boss which fit into two suitably machined spaces upon the boss (B) on the crank axle (A). A nut (G) is screwed upon the boss (B) and clamps the wheel and boss together.

[All persons interested in opposing the grant of a patent on any one of the unmentioned applications may, at any time within two months from Oct. 5, 1892, give notice in the prescribed form of such opposition.]

No. 10,768. J. F. Palmer's "Improvements in or relating to pneumatic wheel tires." June 7, 1892.—This invention relates to pneumatic tires of the kind which is capable of closing automatically any punctures which may be made therein. The object of the invention is to provide in the tire, which is composed mainly of rubber and contains air under pressure, a tread of increased thickness and held under compression, contraction or tension, whereby any punctures that may occur in it shall be automatically closed and the exhaust of air prevented. Incidentally the character thus given to the tire permits it to be inflated by merely introducing a sharp-pointed nozzle connected with the air pump. The compression or tension of the tread is generally accomplished by reversing its curvature transversely from a concave to the intended convex or nearly convex condition, the outer surface being during this change of curvature held in close adhesion to a strip of substantially non-stretching fabric. The compression of the rubber therefore is not brought about primarily by the exercise of internal pneumatic pressure. The invention may be carried out in either of two ways: 1. The inner tube may be made in a primarily open form with the lateral edges in the form of flaps which are to be sealed together on the hub side of the tire to produce the tube; or, 2. the strip of rubber having the flaps may have on a central part a flap of pliable rubber, which forms a closed air tube, the flaps being beaded at their edges to enter a slot in the rim as illustrated. Referring to the illustration it will be seen that the air tube is made of a rubber web (A) moulded along its edges on a rubber strip (B), which is sufficiently wide to produce, when formed into a tube, a tire of the desired diameter and which should be about double the width of the web A. The outer surface of the strip (B) is backed with inelastic material, preferably canvas (R). The tread portion of the rubber (B) is either naturally straight or of an inverted shape in cross section so that when brought into the shape illustrated it is compressed and therefore to some extent self-healing. The tube is enclosed in a covering (C) which may be lined with an in elastic material. The tire is fastened in place preferably in the following manner: Beads (E E) are formed along the edges of the envelope (B) adapted to be inserted and confined in a slot (P) in the rim (D). As shown the beads (E E) are in the form of edges formed by folding the rubber and canvas strip inward along its edges and vulcanizing them to harden and consolidate them. It is found desirable to thicken the rubber (B) towards its opposite edges as they thereby more compactly fill the slot. When so thickened first one bead is inserted into the slot so far as to bring the thinner portion to the edge of the slot in order that the other bead may be slipped past it into the slot. The tire is then righted on the rim thereby bringing both rims coincident against the under side of the edge portions of the slot which

We offer prompt attention, liberal discounts and the highest quality of tube produced. Special terms to factors and merchants.

Our stocks are large, enabling specifications for current sizes to be filled without delay. For four years past our tube has been regularly used by every leading house in England.

stop them against withdrawal. The cover (C) is then cemented on, or, preferably, clamped along its edges between the rim (D) and envelope (B). The downward pressure to the web (A) when the tire is inflated tends the more securely to retain the beads against withdrawal from the slot and effect the clamping of the edges of the cover (C). Other inflating media than air may be employed.

No. 19,301. G. Bebbington's "Improved system of driving gear for the propulsion of velocipedes." Nov. 7, 1891.—This invention relates to a gear for speeding up front driving machines but may be modified so as to apply to rear drivers. On one or both ends of the hub there is fixed a

ANTI-STIFF

It is a marvelous preparation for Strengthening the Muscular System. With Anti-Stiff there is no faith required; it goes straight for the muscles, and you can feel it at work. It has a peculiarly warming, comforting and stimulating effect on all weak or stiff muscles or sinews. Quick in its action, cleanly and pleasant in use. Rub it into muscles every night for a fortnight and you will be pleased at its supporting and strengthening properties. There is not, nor has been, anything like it till now. It differs from all Oils, Embrocations and Liniments, both in substance and effect. Some Athletes are so fond of it that they rub it all over them.

Price, 20c. and 35c. per box. Trainer's Size, \$1.00.

pinion (D) provided with fourteen teeth and on the crank axle (S) there is keyed a wheel (A) having twenty-one teeth, and on a spindle (G) there is keyed a wheel (C), also having twenty-one teeth, gearing with D, and a pinion (B) having fourteen teeth gearing with A. C and B revolve together. The axle (S) is carried in suitable ball bearings at the ends of the fork (H). The numbers of teeth given above may be varied and the ratio of speed varied in proportion. If two sets of gear are required of a different ratio of speed from each other a pinion is provided on each end of the hub, one having more teeth than the other, and the other wheels composing the remainder of the second set of gear are suitably proportioned. When the gear is required to be altered while the

machine is in motion the spindle (G) on each fork is mounted eccentrically, and by turning the spindles about half a revolution it will throw the gear in or out as required, but if the gear is only required to be altered when the machine is at rest the driving wheel can be reversed in the bearing and the wheel (C) altered to suit the different sized wheel on the hub brought into gear. The drawings show the end of the hub (I) on the gear side enlarged and recessed sufficiently for the gear to be covered in by it (C is the crank.)

The Union "P. D. Q."

The '93 Union derives its name, "P. D. Q.," from the words pedaling done quickly. Many names for bicycles are common; the Union people wanted something original. They got it. In the '92 wheel the Humber pattern frame is used; both wheels are twenty-eight inches in diameter and are fitted with the Airtite tire. All bearings, including the crank axle bearing, are positively dust proof; the long steering head, ten inches, which has proved such an excellent feature on the 2:10, is again introduced, and the wheel base is lengthened to forty-three inches. The cranks are round and made with two adjustments. The handle bar has an artistic drop and backward curve. The machine is finished in excellent style and weighs, stripped, thirty-two pounds, which the Union company thinks is light enough for a full roadster which may be ridden by anyone, irrespective of weight. The regular gear will be sixty, but it can be lower or higher, if desired.

The Monarch "Copper-Plate."

The illustration of the Monarch Cycle Company's "Copper-Plate," shown in this issue of the REFEREE, is a splendid likeness of the design of the wheel. It will range in weight from thirty to thirty-two pounds, making it desirable for racing or general use. The Monarch company has made a careful study of what is needed for the American market, and the "Copper-Plate" is the result.

Mr. Sanders' Many Lines.

With Thomas Sanders this time comes Mrs. Sanders, who is an accomplished wheelwoman, and who has taken frequent long tours with her husband in England. Mrs. Sanders has been visiting Mrs. Perkins, wife of the well-known manager of the Liberty factory, Rockaway, where Sanders, Jr., a bright youth, is learning the trade. On this trip Mr. Sanders will show the Crypto geared ordinary and front driving safeties. He will also show samples of Lamplugh's

saddles, take orders for Perry & Co. and sell the British Seamless Steel Tube Company's tubing. Then Bown's safeties, and the many specialties of the well-known Birmingham manufacturer will keep Mr. Sanders out of mischief on this trip. He will come for the west shortly. His present address is Imperial Hotel, New York.

Will Return in January.

C. Vernon Pugh, general manager of the Whitworth Works Cycle Company, Birmingham, will again visit America in January, on business connected with the World's Fair and placing Whitworths generally throughout the country. His company has made arrangements for turning out a very large number of wheels next year and has already sold an enormous number in Great Britain, the continent and Canada. The capacity has been increased to more than four times what it was in 1892.

The 1893 Sunol.

The Sunol Cycle Manufacturing Company, Sixteenth and Canal streets, Chicago, is just now very busy. A half-dozen models have been manufactured and given a thorough test. The Sunol, of

making a leather chain case to weigh only eight ounces. The stays are made of aluminum and the wheel may be taken out without removing the cover. It is designed for any wheel, but will find favor with users of light machines.

The directors of Warman & Hazlewood, at their meeting in Coventry, found the firm's business in a most satisfactory state. The trading profits for the year amounted to over \$60,000, against which the directors' fees, etc., were charged, so that a net profit of \$10,000 was the result. Mr. Warman's report on the American business was quite satisfactory to the directors.

Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

- 485,605, inflatable tire for vehicle wheels; Kirk Brown, Philadelphia, Pa.; filed Nov. 10, 1891; serial No. 411,438.
- 485,633, cushion tire and rim therefor; Robert M. Keating, Springfield, Mass.; filed Aug. 24, 1891; serial No. 403,575.
- 485,678, treadle-crank for bicycles; Walter V. Ash, Newark, N. J.; filed July 29, 1892; serial No. 441,558.
- 485,807, trousers protector; Israel N. Aaronson, New York; filed Feb. 18, 1892; serial No. 421,913.

four pounds. The new ladies' machine, built on straight lines, weighs only thirty pounds.

Trade Notes From New York.

Charles Walker, treasurer of the Elliott Cycle Company, Newton, and his brother, William C., of the Pope Manufacturing Company's office staff, left New York by steamer last week for Savannah, Ga., on a pleasure trip.

Frank White, Bidwell's tire man, returned to New York from a western trip last week, having booked a good number of orders. He reports prospects for '93 as being very bright. Frank rubbed noses with many western friends on his trip, and will go west again in a few weeks.

President Llewellyn Johnson, of the Premier Cycle Company, New York, sailed Wednesday last, with the Stanley show as his principal objective point. He will look out for next season's wheels and novelties in sundries while abroad. Treasurer Douglass will be in charge during Mr. Johnson's absence.

W. Montague Perrett, representing the Bretz & Curtis Manufacturing Company, Philadelphia, was in New York last week with the Scorchers bicycle and

which samples will be shown shortly, will be a model wheel, in design, workmanship and material. Traveling men will be sent out within a few days. Mr. Bishop of the McIntosh-Huntington Company, which controls the output of the Sunol company, was in the city last week during the disagreeable weather, and though admiring Chicago energy and "get there," declared Cleveland his choice, first, last and always. Mr. Bishop leaves a most pleasant impression upon any one with whom he converses. He is a shrewd business man and perfect gentleman, as may also be said of F. P. Smith, the manager of the factory.

Trade Notes from Abroad.

Judging from the reports in the English cycling papers, the Seddon's tire is receiving quite a boom abroad.

The Tom Thumb lamp, weighing but twelve and a half ounces, has been brought out by John Parker, successor to Samuel Snell & Co. Notwithstanding its size it gives a fine light.

William Middlemore is making many improvements in his saddles. A socket made from steel stampings reduces the width of the springs in front and makes the tension more easily accessible.

A Northampton agent named Grove is

485,839, velocipede; Robert F. Darling, Syracuse, N. Y., assignor to E. C. Stearns & Co., same place; filed March 17, 1892; serial No. 425,237.

485,844, ice-velocipede; William Guethler and Frank Gallhaus, Philadelphia, Pa., said Guethler assignor to Wilhelm Neilson, same place; filed Feb. 23, 1892; serial No. 423,547.

485,865, post for cycle saddles; Charles E. Hadley, Chicopee, Mass., assignor to the Overman Wheel Company, same place; filed May 31, 1892.

485,898, tire for bicycle wheels; Thomas H. Sweeting, Philadelphia; filed June 15, 1892; serial No. 436,796.

486,055, velocipede; Cyrus W. Salladee, Cleveland, O., assignor to William N. Woodruff, Hartford, Conn.; filed Oct. 10, 1891; serial No. 408,537.

486,056, cycle vehicle; Cyrus W. Salladee, Cleveland, O., assignor to William N. Woodruff, Hartford, Conn.; filed March 14, 1892; serial No. 594,864.

Trade-marks, 21,967; pneumatic tires for bicycles; Boston Woven Hose and Rubber Company, Boston, Mass.; filed Oct. 8, 1892; essential feature the word "Everette."

The Four Quintons.

The Bretz & Curtis Manufacturing Company's advertisement in this issue shows an illustration of the new Quinton Scorchers. The full roadster weighs, with all on except the mud-guards, thirty-five pounds. The light roadster weighs thirty pounds, being of the same design as the roadster, but having no brake or mudguards. The racer has 28 inch front and 26-inch rear wheels, bright yellow rims and weighs twenty-

Scorchers saddle. He succeeded in placing his saddle with the Bidwell Cycle Company and sold a lot to the Raleigh Cycle Company. Perrett also did some business with his Scorchers wheel.

W. H. Kirkpatrick, known as "Sundry Kirk," through his long and useful stay in the employ of Howard A. Smith & Co., Newark, N. J., will in the future be known as "Lyndhurst Kirk," as he has accepted a lucrative position as bicycle department manager with McKee & Harrington. Kirk goes on the road this week through New England.

A. Strauss, the New York Belting and Packing Company's tire manager; is now in the west. Having only returned to New York a few days ago from a western trip, he again started for the land of the setting sun. The new protection strip tire made by this company looks well, and is a self-healer. Strauss will have three different tires to show for next season, and has booked many orders.

Stephen Golder returned to New York last Friday and reported a profitable trip with New Howes in Canada. While there he went deer-stalking with some friends and says he killed his first deer, a magnificent buck, the scalp of which

MAGIC BICYCLE OILER.

Patent applied for.

We are now ready to supply these goods to the general trade, and claim for them the following points of superiority over any others on the market.

First: They do not leak, and are as clean to carry in the pocket or tool bag as a knife or wrench.

Second: You can get as much or as little oil from them as you need. When a drop only is required, place the feed wire where the drop is needed and press down. If a larger quantity is required press the bottom of the oiler, and the oil will flow freely from the wire. You do not need to waste oil and daub your machine with this oiler. And you can oil your wheel quicker than with any other.

Full size cut.
Patent applied for.

24 Cash Prizes.

We desire to thoroughly introduce our Sunol Bicycles throughout the United States in 1893, and in order to give them such an introduction, we realize that we must advertise liberally and well. We are willing to advertise liberally, but that it may be done well, we must have a supply of bright original advertisements. We therefore make the following offer for the best 24 advertising ideas, first prize to be awarded to the author of the best, second prize to the author of the second best, etc.; decision to be made by three competent judges:

1st Prize, \$200. 2nd Prize, \$100. 3rd Prize, \$50.
4th Prize, \$25. 5th to 24th Prize, \$10.

We will also pay \$5.00 for each idea not securing a prize that we think we can make use of. Contest closes January 15th, 1893. For particulars as to the nature of advertisements required, etc., address—

The McIntosh-Huntington Co.,

Adv. Dep't.

DON'T BUY A WHEEL—until you have consulted the advertising columns of this paper. None but first-class, reliable concerns use this medium to make known their goods.

Columbia '92 Racer, 26 pounds, gearing 68, has not been ridden ten miles, without a scratch, \$175, for.....\$150 00
Columbia Light Roadster, cushion tires, \$135, for..... 80 00
Swift, Model C, '92, cushion tire, \$120, for.. 90 00
Victor, Model C, '92, cushion tire, has not been ridden 50 miles, \$135 for..... 100 00
Ladies' Juno, '92, cushion tires, almost new, \$75 for..... 45 00
Lovell Diamond, '92, cushion tire, with bell, whistle, stand and lock, \$100 for.. 65 00
Rob Roy, '92, 28-inch wheels, cushion tires, \$75 for..... 40 00
Any of the above wheels will be sent C. O. D. on receipt of \$10, with privilege of examination.

F. R. ZEIT, Medford, Wis.

he brought back. Mrs. Golder accompanied her husband on the Canadian trip, and sailed for England alone Wednesday, Mr. Golder tarrying this side on business bent.

Chicago Trade Jottings.

"Elliptical" De Vore of Freeport was in Chicago last week.

John Read, of Boston, was at the Auditorium Hotel this week.

H. A. Lozier of Cleveland was in Chicago "lookin' 'round," last week.

Henry Andrae was in the city last week. He is making contracts for next year.

Joseph Ryan, of Hibbard, Spencer, Bartlett & Co., is on the road with samples.

A. J. Nicolet is having his trick-riding 48-inch Eagle fitted with Morgan & Wright racing tires.

Willard Parker, president of the Niagara Machine Company of Buffalo, was in Chicago last week.

Herbert Hadden left Chicago Monday for Toronto. After Thursday his address will be Everett House, New York.

A prominent bicycle man has been asked by a representative of the Warwick Cycle Company to open a retail store in Chicago.

Charles C. Mead, late with the Humber Cycle Company, has associated himself with the Monarch Cycle Company as traveling salesman.

George S. Webb of Aurora has done a thriving business this season, the entire volume amounting to \$20,000. The largest business of any of the small dealers in the state.

The Gormully & Jeffery Manufacturing Company is showing an outing bag 7x10 inches, fixed so as to strap to the frame. It is convenient, large and out of the way entirely.

The Western Cycle Company, Chicago, E. L. Furgeson, proprietor, has taken the agency for the Triumph through Mr. Bettman, managing director of the Triumph Cycle Company.

F. H. Chapman, of the Chapman Hardware Company, Toledo, was in the city last week. He closed with the Taylor Cycle Company to handle Psychos and Tourists for northwestern Ohio and northeastern Indiana.

Charles H. Stephens has lately moved his store to the Douglas Park viaduct and is engaged in the manufacture of bicycles, several of which he has turned out at a weight of twenty-three pounds.

Davis & Thomson, formerly doing a cycle business at 4208 Cottage Grove avenue, have dissolved partnership. F. J. Thompson continues the business.

Davis was formerly a foreman with Brown Brothers, and later with Andrae.

The Marsh-Davis Cycle Company is preparing for a large trade next year. The business manager, Mr. Crafts, has just returned from a trip southwest, and received every encouragement. The new shops, 62 South Canal street, afford them ample facilities.

The Coventry Machinists' Company may well be proud of its magnificent store front. The plate glass in the window is as large as any ever made, being 148x138 inches and 5-8 of an inch thick. The large door glass is 65x40. The entire front is handsomely bronzed, and the show window is the most handsome on the street.

E. J. Ryan, formerly with the St. Nicholas Manufacturing Company, is now on the road for Hibbard, Spencer, Bartlett & Co. This firm has on exhibition samples of the '93 St. Nicholas wheels. If the workmanship is equal to the fine appearance, and the reputation of the St. Nicholas company admits of nothing else, this line of wheels will certainly sell like hot cakes. The fac-

Some 1893 Novelties.

The R. F. Hall Manufacturing Company, of Birmingham, is introducing some novelties for 1893 which will be exhibited at the Stanley show. A light racing chain, lighter, probably, than the Humber pattern, is being made, and Hall's corrugated and depressed roller chain will be among many improvements. Probably no chain on the market has had a greater success than this one, for the company has re-

ceived testimonial letters, facsimile copies of which have been sent the REFEREE, from every manufacturer of note in Great Britain. A new foot-rest, which may be put on the fork-side without removing the wheel, a cut of which is shown, is another novelty. A sample pair sent us was attached in a moment and without the least difficulty. They are made in five sizes. The company is making a brake for pneumatic-tired wheels that seems to be an excellent thing. Each square may be turned around four times, so that it would take a lifetime to wear them out. The brake is light, cannot tear the tire, and grips as well in wet as dry weather. A pressure gauge, adapted for use with pneumatic tires, is also made by the company. A detachable and dust-proof bottom bracket, gears for the geared ordinary and front driver, a new inflator and a large assortment of parts will also be exhibited at the Stanley show—stand 219.

tory never before turned out so attractive a line.

C. V. Dasey & Brother, 3109 Prairie avenue, have completed a safety after a model distinctly their own. The frame is a novel form of a diamond, the weight about thirty-two pounds, the machine being steel throughout, with forgings and the best bearings obtainable. The young men will probably manufacture this winter.

C. L. Dikeman, secretary, and F. A. Weaver, traveling representative of the Eagle Bicycle Manufacturing Company, were in Chicago Monday and Tuesday. An agent for this popular wheel was appointed in this city. All through the country Eagles will be sold next season, many leading agents having taken this line to push.

The Coventry Machinists' Company may be able to exhibit American-made Swifts at the Philadelphia cycle show. The first product will be assembled in this country, as a factory for the complete manufacture of cycles cannot be organized in so short a time. The change of administration will make no change of plans necessary.

The firm of Thorsen & Cassidy has been incorporated with a capital stock of \$100,000, fully paid in. Although young in business, Thorsen & Cassidy have succeeded in building up an enormous sporting goods trade throughout the western states, and with additional capital the trade will be doubled. In the cycle department only one contract has as yet been made, and that is with the Western Wheel Works.

Miscellaneous Trade Notes.

The Truesdail Machine & Arms Company, St. Louis, has commenced to import Triumphs.

The Buckeye Cycle Company of Cincinnati, has placed a large order with the March-Davis Cycle Company.

The Union Drawn Steel Company, Beaver Falls, Pa., has sold out its chain manufactory to E. A. Kinney & Co., Cincinnati.

It has now been settled that the American-made Rudge will be manufactured in Peoria, the plant formerly used as a watch factory having been secured.

C. L. Green has purchased the interests of A. H. Thomas and C. H. Heams in the Hub Cycle Company of Richmond, Ind.

The Countess Fabbriotti, said to be the most beautiful woman in Florence, Italy, is frequently seen riding with her husband. Both use Raleighs.

Mr. McKee, of McKee & Harrington, has left New York for a western trip. He is to close some large deals with western dealers for the Lyndhurst.

E. Alsdorf & Co., Newark, N. J., will handle Telephone cycles in New Jersey next year. This firm has a large retail store in Newark and it does a big jobbing business.

S. L. Beals, formerly secretary of the Premier Cycle Company, has severed his connection with that concern and is now with Kingman & Co., Peoria, showing their line through the south.

Frank G. Silvers, the Derby Cycle Company's traveler, is now doing North and South Dakota, southern Minnesota, western Illinois, northern Missouri, northeastern Kansas and Iowa in the interest of the Derby.

President Smith of the Indiana Bicycle Manufacturing Company, Indianapolis, has just returned home from an eastern trip. He says the recent fire at the factory will in no way interfere with its arrangements for next year.

Detch & Sons' cycle emporium at Richmond, Ind., took fire on Wednesday of last week and before the flames were under control goods valued at from \$1,500 to \$2,000 had been damaged. The loss was fully covered by insurance.

The March-Davis Cycle Company has placed the agency for the March safeties for Ohio, Pennsylvania, New York, Washington, D. C., and all territory south of the Ohio with the Buckeye Cycle Company, of Cincinnati, which has ordered 250 wheels.

The Stover Manufacturing Company is going to manufacture this season a few wheels to list at \$175. The frames will be made of Damascus gun barrels. The weight will be twenty-eight pounds. P. J. Berlo, the Boston crack, has made wheels from Damascus gun barrels this season and sold them for \$250. The Stover wheels will not be enameled, the

frames being highly polished and kept from rusting by the application of a little oil.

It is rumored that the Eagle Bicycle Manufacturing Company, of Torrington, Conn., will soon be in the same position as regards elliptical sprocket wheels as the Pope Manufacturing Company.

The Detroit Cycle Company has been incorporated with a capital stock of \$10,000, paid in. The officers are John A. Matherson, president; Edwin B. Robinson, secretary and John T. Holmes, treasurer.

Morgan & Wright pneumatic tires are very popular among horsemen throughout the country. Nancy Hanks is now at Nashville, where Budd Doble is preparing to send the queen of the turf for record hitched to a Sterling sulky fitted with M. & W. racing tires.

Percy Harris, late of the Humber-Rover Cycle Company, Chicago, is now manager of the Phoenix Cycle Company, Philadelphia. Mr. Harris is well pleased with his new position and the Quaker City. The house has not as yet decided what wheels it will handle next season.

George M. Hendee, representing Hulbert Bros. & Co., of New York, was in Peoria the early part of last week and came to Chicago Wednesday evening, remaining there until Sunday evening. Mr. Hendee seeks to place the entire western agency for the Majestic cycles with some prominent firm.

John T. Bailey & Co., Philadelphia, will job bicycles on a large scale next year. This concern has secured the eastern agency for several well-known makes, and will certainly do its share of the business. William J. Greer has charge of the bicycle department and says the outlook is very good.

The genial Birmingham trades representative, Thomas Sanders, was in New York last week with his several specialties. Tubing and Bown's Aeolus bicycle are the chief things in a trade way Mr. Sanders will sell on this trip. He reports orders for the famous Credenda tubing and inquiries for the Bown bicycle as good.

George C. Cribbs, Milwaukee's wholesale implement and carriage dealer, on Saturday gave Mr. Hadden of Bayliss, Thomas & Co., manufacturers of the Excelsior, an order for 500 wheels, the first shipment to reach this country Jan. 1. Mr. Cribbs will cover Wisconsin, North Dakota, South Dakota, Nebraska and Kansas.

The Campbell Manufacturing Company, of New York, manufactures the highest-priced bicycle on the market. The list is \$180, and those who have seen the samples say the wheel is worth the money. Nor does the firm find great difficulty in disposing of so high priced a wheel. Only two hundred machines will be turned out this season.

The McIntosh-Huntington Company, of Cleveland, Ohio, has secured the United States agency for the Crypto geared ordinary and front driving safety. This company has, by natural business tact, built up one of the most prominent cycle business departments in the United States. Its agencies for 1893 include the King of the Road lamp, Lucas' cyclealities for the northwest and the south, and Southard cranks for the entire United States.

The Union Plating & Manufacturing Company will hereafter be known as the Sterling Cycle Works. The Sterling Cycle Company has been organized to handle Sterlings in all territory west of the east line of Indiana, the Charles F. Stokes Manufacturing Company handling all east of that line. C. G. Field, for many years with A. G. Spalding & Bros.,

HIGH-GRADE PNEUMATIC. WEIGHT, 36 LBS.

THE ECLIPSE BICYCLE CO.,

BEAVER FALLS, PA.

has been secured. He closed a large contract this week with A. C. Abbott Sons & Co. of Marshalltown, Iowa, for the state of Iowa.

Luthy & Co., of Peoria, have admitted into the firm a bright business man, D. W. Voorhees, a nephew of Senator Voorhees of Indiana. This gentleman was formerly manager of the Kentucky Union Railway Company; vice-president of the Voorhees Starch and Refinery Company of Danville, and president of the Illinois Trotting Circuit.

On Wednesday of last week, Rouse, Hazard & Co. closed a deal with F. F.

Ide, of Peoria, to manufacture the Rudge, Sylph and Overland safeties. Charles E. Duryea, designer of the Sylph, is now located permanently in Peoria, devoting his spare moments to a flying machine. Friends think he has undoubtedly caught the knack and will be the first man to fly.

Last week Justice of the Peace Hitchens, of Cleveland, went out for a bicycle ride to Lakewood. The authorities of that burg do not allow sidewalk-riding. The judge rode on the walk, a constable nabbed him and the local magistrate taxed him \$5 and costs.

Holland Automatic Safety Stand.

(PATENT APPLIED FOR.)

Easily and Speedily Attached to any Central Tube, Diamond or Drop Frame Safety. NEVER IN THE WAY OF THE RIDER. Will hold machine upright on any level place. *Machine cannot fall either way. Both arms work in unison, up or down, when operated from either side of machine.* It cannot rattle. Adds to the appearance of the machine and weighs but a trifle. Full Nickel-plated with Rubber Tips—cannot mar the finish. **PRICE, \$3.00.**

"A BLOW AT GOOD ROADS."

We have the most sincere contempt for an enemy of the cause known as good roads; we praise the man or men who have worked for that cause and those who will in the future labor for the betterment of the highways of the country. An enemy of good roads is an enemy of good government and a country's prosperity. Under the heading, "A Blow at Good Roads," the *Union and Advertiser* of Rochester, in relation to Colonel Pope's scheme to have a permanent good roads exhibit in Washington, and a bureau in connection, says:

Great as is our interest in the improvement of our highways, and willing as we are to advocate all legitimate ways of promoting this meritorious cause, we feel obliged to answer this question with a most emphatic negative. If good roads can be had in no other way than through the establishment of another government department, then we are decidedly opposed to having them at all. Intolerable as is the evil of bad roads, they are infinitely more tolerable than a large increase of federal officials, of political patronage to be fought for and of the chances for jobbery and corruption. The duties now entrusted to the federal government are none too well done; in fact they are wretchedly done. We do not, therefore, propose to aid in any way in adding to these duties. On the contrary, we shall do all in our power to restrict them and secure a more efficient performance of them.

This being our position on this important subject, we have thrown Mr. Pope's blanks into the waste paper basket. We advise him as well as others interested to do the same thing with the petitions in their possession.

We should like to know what creates prosperity if good roads do not, and we should also like to know how these good roads may be had if the government—state or national—does not take up the work in some manner. Far more capable judges of the benefits to be derived from and the necessity of good roads than the *Union and Advertiser* have said that as is the condition of the roads of the land, so is the prosperity of the country. This fact is so well known that it seems almost absurd to even refer to it. Excepting the paper referred to there is not a journal in the land that is not heartily in favor of good roads; certainly none would decry them. The Rochester paper might take a lesson from the Chicago *Tribune*, which, in a lengthy editorial on the bureau scheme, said:

All this is in the line of highly desirable progress. The one great need of the agricultural regions in the United States is good wagon roads, this being in many sections connected intimately with the necessity for better drainage of the land. Within the last quarter of a century the country has been gridironed with steam lines, while the improvement of wagon roads was systematically

neglected, as if the latter were rendered inutile by the former. Never was there a greater mistake. * * * The low prices of which the farmer often complains and which he is in the habit of attributing to other causes are in large part due to his inability to market his produce otherwise than during the great rush, in which all are anxious to sell, this being because the roads which connect his farm with the railroad depot are at other times impassable for loaded wagons. * * * The notorious unwillingness of the young men to stay on the farm if they can help it is largely due to the fact of bad country roads. * * * The demand for better roads ought to be coupled with a request for such legislation as would make it to the interest of owners of wheeled vehicles to use the broad tire, nothing less than four and one-half inches being allowed for loaded wagons without a special tax.

Every word of the above is true, of that there is no doubt. The farmer needs good roads most of all, but every merchant must necessarily be benefited by them, and we doubt if there exists one business man who would not do all in his power to aid in promoting a good roads bureau. In such a matter politics cuts no figure—Democrats and Republicans alike are interested. The recent election will have no bearing on the case, unless it be in favor of the bureau, for many of the congressmen-elect have given their pledges to favor good roads.

Colonel Pope was, some thought, a Republican and a protectionist because he had big interests which were greatly favored by a high tariff, but such is not the case. He is a Democrat and was, we are informed, an ardent Cleveland supporter. We do not think the colonel designed to have that bureau created simply to provide office and a chance for boodling for someone; we believe him sincere in his endeavors to establish a branch of the government that will be of almost unforeseen good.

DESIGNS FOR 1893.

The new styles of the recognized standards are not yet upon the market, though most of the dealers and a privileged few outsiders have seen some of the models. It is not safe to prophesy just what they will all be like at this writing. We have every reason to believe that the high grade wheels for the season of '93 will be the finest and best that educated mechanism, cultivated desires, superior workmanship and well-equipped apparatus can devise. It must be understood that this means very much, and includes the different parts of the wheel. For instance, improved saddles are very much desired, especially for the ladies' wheels, and the experiences of the past, combined with the inventive genius of several very clever doctors who are and have been looking for perfection in this one particular, will bring about a radical change, and hereafter the wants of this special class may be suitably supplied. The method of adjusting the gearing, the best construction for the head, and the whys and wherefores of the much abused handle-bar, will need attention, for it is perfectly plain that the dropped handle-bar is not for all. The buyers are their own educators on this one point, notwithstanding all that has been fired at them by writers from A to Z. And so one might continue with points for improvement, including the minor parts of the machine.

COMING TO IT FINALLY.

There have been some startling occurrences lately—to the lay public, at least. The good people of Minneapolis were shocked to see the pastor of the Church of the New Jerusalem, Rev. J. S. David, mounted on a bicycle and making his way towards his house of worship. As a result the Flour City people have something to talk about. On the evening of the same Sunday a Kalamazoo preacher startled his flock by having a bicycle on either side of his pulpit, with lamps

brightly burning. The deacons didn't know whether the minister had turned the church into an auction room or a cycle show. But his discourse, which is published in another column, explained all. At Erie, Pa., a lantern parade was to have been held a few days since, but was abandoned on account of bad weather. But had the parade taken place even the city solicitor was to have participated with gaily decorated wheel, while the town marshal intended to give an exhibition of fancy riding. So it will be seen that it is not only "the boys" who participate in parades and ride on a Sunday. Times and customs are changing, surely.

JOHNSON'S ALLEGED INTERVIEW.

On Thursday and Friday of last week a number of papers printed press dispatches from New York, dated Nov. 17, in which Johnson is said to have reiterated his charges against the Chicago racing men and their track tactics. Although the alleged interview does not say so, it is made to appear that Johnson was in New York prior to his departure for the south. But Johnson was never in Gotham in the first place, and he never made charges against the Chicago men as claimed. An hour or two before he left for Nashville, Johnson was at the REFEREE office in Chicago and he then and there strongly denied that he had ever made such charges as he is said to have done. Johnson had no complaint whatever to make against the Chicago men, so that the alleged interviews are all bogus, emanating from those who were unfortunate enough to be fairly beaten in the races at Washington Park.

THE utility of the bicycle was thoroughly demonstrated at Minneapolis on election day, when several good riders were kept busy for several hours gathering the returns and delivering them to the city hall. The city clerk thinks a half-dozen horses could not cover the ground that one bicycle rider did, and hereafter when he wants a messenger it must be one on a wheel.

NOTWITHSTANDING the fact that the Sanger-Zimmerman match is as dead as the proverbial door nail, the space writers in the daily and weekly papers manage to keep the subject before the eyes of their readers. There is not one chance in a hundred of these two men coming together in a match race. It would be a blessing to let the matter rest.

NOTES AND COMMENTS

Years ago the traveler spent several not too pleasant months in Pueblo. He landed, in what was then a stragling frontier town, a moneyless, tenderfoot kid, without a friend within a thousand miles. He had learned what it meant to go hungry and bedless and later what work as a menial in a second-rate hotel and as a slave in a Colorado smelter costs to pride and brawn. Twelve years have made a mighty improvement in the Mesa city and it has grown to a point where it puts on all sorts of metropolitan airs. Its streets are wide and well paved, its buildings handsome and substantial, and it has more than 300 cyclists. The principal dealer is a French gentleman, named Jonod, who has the politeness and volubility of his race, and likewise a very fine store, well stocked with various cycles and a well built bank account. The traveler met several wheelmen, found them clever chaps and very enthusiastic.

* * *

An enjoyable ride of 116 miles along the foot of the everlasting hills, clad half way down their sides in snow, brought the traveler into Denver, the gate of the

great west, and the most wonderful city, excepting perhaps Chicago, in the country. The traveler remembers when it was a different place—when in the place of stately buildings, beautiful parks, level and well-paved streets, cable cars and splendid hotels, there were adobe huts, wooden shacks, one long street filled with blinding dust, a ramshackle canovassary,—half saloon, half gambling house, and wholly abominable—called a hotel, a place where the wingless ones who are so prone to "get there" were rumored to have had a habit of consulting the register in order to find the rooms of particularly desirable travelers, and where the meat was so tough that it was written "a fork could not be stuck into the gravy." Cowboys and worse made life a burden to people of a timid nature by riding up and down the streets late at night shooting at sign boards and not seldom at one another. Now the city is as safe and peaceful as any in this broad land, and as beautiful. The traveler went the rounds of the trade, visiting the genial G. E. Hannan, who handles the Stover and Cleveland cycles; the Sperry Cycle Company, which is representing the Columbia and Kenwood; Banks & Anderson, Charles F. Stokes, Jr., and last, but by no manner of means least, he called on Candy. Everyone knows Candy, and no one knows aught but good of him. He exhibited with pardonable pride, his collection of bows, arrows, spears, deer horns, etc.; treated the traveler to a cigar, which was so bad that the taste still remains; told him a lot of tales, more or less wonderful; tried to sell him a Victor; failing, tried to sell him a strong and wonderful machine, which he said was a Chainless Telegram, failed again, and settled down to a good old-fashioned visit, which the traveler thoroughly enjoyed.

The traveler has a weakness for literary people, perhaps because he would like to be literary himself, if he could; and therefore he called on the *Sports Afield*. Mr. King, the manager, is in the east, but an old friend, a clever writer, and a splendid rider, Mr. McGuire, was in, and we had a very pleasant talk. An invitation to inspect the Ramblers was accepted and together we strolled down to their club rooms, where the traveler met most of the famous western riders, after which a visit was made to the Social Wheel Club, a rival organization, and an enjoyable evening was passed in their charming quarters. The Ramblers are about to erect a \$25,000 club house and all the Denver wheelmen are anxious to have the '94 meet held in Denver. It seems to the traveler that this is a splendid idea. There is not an eastern city that can offer half the inducement.

* * *

In Denver the traveler found a copy of the REFEREE, in which his old friend, "Senator" Morgan, aided and abetted by L. C. Boardman, "pays respect to the 'Italian.'" Oh, senator, senator, where has your book larnin' gone to, and you a Welshman, too. A lineal descendant for all I know (certainly in cunning) of the famous round-table knight who served as kitchen knave for great King Arthur and whose kitchen name I have appropriated. Norman French, my boy, not Roman. And so I am a "has been," am I, and the parade was all that was lovely, was it? You have forgotten, your letter regarding it, written the next morning, senator. I don't understand Mr. Boardman's allusion to "high grade wheels and inner tubes" and hence will hold my peace. Just the same, as a "has been" and a crank I shall bang away at the follies of the trade, the "push" and various other things and let the wise judge.

LA COTE MAL TAILE.
(or the Short Jacket.)

Among the callers at our New York office last week were: Amos Shirley, James Josephi, Imperial traveler; S. Golder, New Howe agent; Henry D. Stone, cycle agent, Worcester; Trenchard and Vose, two of the piano populists; L. Crondel, Howard A. Smith & Co.; W. B. Troy, *Sporting Life*; F. F. Ives, Ormonde company; J. H. Sager, Rich & Sager, Rochester; President Miller, Springfield Bicycle Club; Guy P. Wilson; Frank Egan, cycling editor *Sporting Life*; L. A. (Airtite) Howell, Airtite Tire Company; W. A. Schockey, western traveler Pope Manufacturing Company; Sydney Bowman, New York cycle agent; L. B. Whymper, Schoverling, Daly & Gales, New York.

Piano Echoes.

The piano contest in New York has at last been settled satisfactorily, at least to Holmes, of New Jersey, for he gets the piano. Vose, of Brooklyn condensed milk fame, received the Century Columbia, while Trenchard gets a suit of all wool and yard wide underwear, and a pair of shoes to recompense him for the tramping he did for votes. The *Recorder* finally discovered that the bogus votes all came from the same factory and handsomely apologized to the four leaders, Holmes, Voss, Trenchard and Worden. Vose and Trenchard paid the REFEREE a visit. They enjoyed the cartoon and did not threaten a libel suit or anything of that kind. But if there was any doubt existing regarding Vose's acquaintance with cycling or cyclists, it can be now dispelled, for he had never heard of the REFEREE (so Boardman said) until people asked him how the milk market stood. Then he hurried to see a copy.

The *Recorder*, in thanking the REFEREE for the cartoon and compliment, said that it was well done, but had hurt the feelings of some of its readers considerably. Seven letters of protest like the following have been received:

Dear Sir:—Your caricature of our *Recorder* contest is a good one but I should think before you speak as you do you would learn the true facts. I notice in one of your articles you give other parties a roasting because they have been a little off in their writings, but you have a good chance to right yourself and at the same time give the contestants of the late contest their due. It has been proven that neither of the contestants had "fake" ballots and all were genuine, therefore you have done a great injustice by proclaiming that their friends all had unfair schemes of their own. Mr. Albert was the only one proven to have bogus ballots, and in all justice to the other gentlemen I am quite certain you will set them right before their friends. Respectfully,

JONAS WENDLING.

Yes, Jonas, but the day after the contest closed the *Recorder* said: "Many bogus votes were discovered. Not all of them were counterfeits, but among each one of the contestants' votes were found coupons that were printed outside the *Recorder* office." The REFEREE was also informed that even the expert could not discover the difference between a good and bad vote, so clever was the work, so if bogus votes found their way into the righteous competitors' box only they could not be expected to know anything about it. It has not, therefore been proven that the winners did not have "fake" ballots. An expert could not prove it although it is known beyond a

doubt that a printer voted heavily during the contest, and one of the contestants got 303 to the REFEREE's knowledge. It is well to say, however, that neither of the winners knowingly received, or allowed bogus votes to be used, and Mr. Holmes, of Newark, is entitled to the piano, which will, he says, be duly christened later on. In the meanwhile the milk industry is booming, and the church and railroad industries are on a good footing.

Will Work For Good Roads.

Herewith we present a faithful likeness of Congressman John H. Graham of Brooklyn. Col. Graham is a Democrat and made a remarkable fight in the late election, and won a seat for the Democrats in a stronghold of the opposite party. The election of Col. Graham means a great thing for good roads in the next national assemblage, as he is a

warm advocate of the subject. In cycling and the trade Col. Graham is well known as the selling agent of the New Departure bells. Under the caption "Reasons why he should be elected," a hundred friends sent out the following just before election:

John H. Graham has been a life-long citizen of Brooklyn, and has always resided near or in the fifth congressional district. He is fifty-seven years of age and a self-made man. Having received a common school education in old public school No. 4, under the late Samuel C. Barnes, he then served his full apprenticeship as a carpenter and builder. Later he entered the employ of the wholesale hardware house of Sargent & Company. He then started in the hardware business for himself, at the corner of Kent and Myrtle avenues. At this time he was serving the citizens of Brooklyn as a volunteer fireman.

At the outbreak of the war he organized Company A of the Fifth Regiment Heavy Artillery, and served as its captain, the regiment being under the command of his father, Col. Samuel Graham. Capt. Graham served with his regiment throughout the war, and was breveted lieutenant colonel for gallant and meritorious conduct at Harper's Ferry and in the Shenandoah Valley.

At the close of the war his business sagacity, together with his knowledge of gun equipment, led to his engagement with B. B. Hotchkiss, the world-renowned inventor of the present Hotchkiss guns.

On Jan. 1, 1870, he engaged in the hardware business for himself in New York City, and by his activity and close application gradually built up the business, so that to-day he is one of the largest representatives of American manufacturers of hardware in the country. When it was supposed that the World's Columbian Exposition would be held in New York, Mr. Graham was unanimously chosen by the Hardware Board of Trade, and was appointed by Mayor Grant to represent the hardware interests.

Besides his regular business, he is connected with several banking, mercantile and charitable

institutions; he is a director of the National Shoe and Leather Bank of New York City, a trustee of the East Brooklyn Savings Bank, and one of the advisory committee of the Twenty-first ward of the Association for the Improvement of the Condition of the Poor.

Being so largely identified with American industries, he is naturally in favor of tariff reform, and believes that the inequalities of the tariff laws should be so corrected and adjusted as to afford all needed and proper protection to American industries, and so extend our markets that the already over-production of many of our factories may be disposed of, and thus give steady employment to those engaged in manufacture, both employer and employee. He is in favor of a sound currency, liberal pension laws, and such other legislation as will tend to the comfort and prosperity of all our people.

His long residence and activity in the district have given him a thorough knowledge of its needs; his practical business experience and connection with financial institutions and his public spirit make him eminently fitted to represent the fifth congressional district in congress.

Col. Graham looked happy when the REFEREE representative called on him at his place of business, Chambers street, and stated that good roads would have his hearty support in the next national assembly.

The Corpse Will Be Sass.

To illustrate the uncertainty of the trend of events, Chauncey M. Depew told a story at the recent New York banquet at which President-elect Cleveland was one of the distinguished guests. Chauncey said he had hoped to be present in the capacity of eulogist over the remains of a friend (looking towards Grover), but he found that he was the corpse himself. He also said:

A classmate of mine who was a preacher, found himself located in a spiritualistic neighborhood, and the leader of the spiritualist band died, and his next friend came to see the clergyman and said "We have something of the old Puritan spirit left, and we think that our leader ought to be buried by a Christian ceremonial. Will you attend it?"

My clergyman friend in Christian charity went around. He gave out a hymn, read a scriptural passage and made such remarks as he conscientiously could. Whereupon the wife of the dead spiritualist arose and said that she had a communication from her husband. It was the clergyman's address to pieces, ripped up the scriptural passage he had quoted and denounced the hymn.

The survivors of the spiritualist band said, "We beg your pardon. We had no idea that our leader would come back and act in this manner; we hope that you will forgive it." My friend the minister said, "I forgive it because this is the first time in the many ministrations I have had of this kind when I have ever been 'sassed' by the corpse." [Roars of laughter.]

The above will do to illustrate the position the racing board will be placed in if it encourages makers' amateurism or promateurism, which is the same thing. The corpse will "sass" it when the inevitable burial of the corpse shall come. Frank Ives, one of the old promateur Ducker boys, said recently to a REFEREE man: "There is absolutely no foundation for promateurism or makers' amateurs, and a man must either be an amateur or professional, pure and simple. There must be a solid foundation to build on, and there is no foundation for a middle class which is neither one thing nor the other.

He Got The News.

John Schoefer, known as plain "Jack" by his friends, who was a well known figure in the agency line in Brooklyn last year, is now doing nicely as Bidwell's southern traveler. Schoefer, in the days of '85-'86, was Brooklyn correspondent of Ducker's *Wheelmen's Gazette*, and for a sixteen-year-old Jack was a hummer. The Brooklyn news was read with both anger and delight by the cyclists of the City of Churches, and the unknown correspondent hit right and left. Letters of protest floated in to Ducker, who in turn referred them to "his Brooklyn man" Editor Ducker had never seen his live correspondent and thought him to be a man. The stories he told of Brooklyn cyclists generally bordered on truth, but

when a caricature of three well known Brooklyn riders (showing them partially hid behind a tree with their ordinaries turned upside down and with cyclometers and wheels whirling around, propelled by the riders' strong arms) and labelled, "the way some Brooklyn riders make century runs," patience gave out and a libel suit was threatened, but "Jack had proof and so wrote the editor. The crowning hour of his reportorial career came, though, when Ducker appointed him a member of the A. C. U. (American Cyclist Union) racing board, Ducker recognizing his worth from his correspondence. Schoefer (a mere lad) was much disturbed and he went to Springfield to decline the position owing to his youth. When he met Ducker he said: "I want to talk to you about the A. C. U. racing board office."

"Oh, I have appointed my Brooklyn man to that position," returned Ducker. "I am your Brooklyn correspondent," meekly said the boy Schoefer.

Ducker for once was upset, but was able to say: "You are my Brooklyn man, eh! well, you will do for one of my A. C. U. racing board; you are old in the ways of cycling, if not in years."

Col. Pope for Cash Prizes.

Col. Albert A. Pope was in New York last Thursday and was compelled to hold a sort of levee at 12 Warren street all day. From the time of his arrival to his departure a constant stream of people, bent on all sorts of schemes, floated into Elliott Mason's private office. The cycling press was fairly well represented at the levee, and the colonel sent all away with crumbs of comfort in some shape or other. Frank Egan of *Sporting Life* was on hand and did his call in whispers, but not low enough to prevent the REFEREE from catching the drift of things later on. Boardman of the *Recorder* talked to the colonel about that proposed road from New York to Chicago, but did not receive much encouragement. Col. Pope foresew difficulties in the scheme of tackling over a thousand miles of good road at one fell swoop, and talked inter-state law difficulties so well that Boardman's courage wilted to a remarkable degree. The colonel would have the scheme like Jacob's ladder, and to reach the heaven of cycling hope he would tackle the different states separately, rung by rung, and climb steadily and firmly until the top was reached. The colonel is a soldier and leader of soldiers, and knows the value of strategy and calculation in order to turn the enemy's lines and start a battle in the most advantageous way.

The REFEREE man received a cordial welcome when his turn came, and protested that thirty seconds was the time he would engage the colonel's attention, "Sit right down here, I want to tell you something," was the response, and that thirty seconds lengthened to fifteen minutes. "What do I know about the cash prize league? Well, just enough that I will predict that it will go and be a success. No, I will not be financially interested; that is, I am not at present," said the colonel guardedly. "Do I believe in cash prizes? Yes, with all my heart. Why not? Why, some of my closest friends, Mr. Forbes (owner of Nancy Hanks) and several yachting friends all compete for cash prizes, and I have been competing for cash prizes in a business way and in a racing way for many years, and it looks as if I have been successful, does it not? An association to govern the racing will be a success, and I fancy the base ball people will be the principal financial backers of the scheme. I also believe," added the colonel, "that such an association will purify the amateur ranks of the present

professionalism. The principal base ball grounds, with cement tracks, will be used, and there will be little expense outside the building of the tracks, as the grounds and stands are all right for the purpose. The idea will not only benefit cycling, but will also be a good thing for the base ball people, who cannot but acknowledge the decline of base ball and the rise of cycling. The cash prize movement now has the endorsement of some of the progressive people in the country, and if properly governed the scheme cannot but create a boom for the sport. Yes, good roads is my chief work just now, and if you could only see the hundreds of endorsements of the press, many of them editorials from the greatest papers of the union, which come to me daily, it would surprise you. My good roads force of employees is kept busy with the campaign of good roads education I have mapped out, and of all my successes this last movement, national in character, for good roads, pleases me most, and," concluded the colonel, "in all my prosperity and successes I am always accessible to my friends, not forgetting that I was once a poor boy, owing my success to an appreciative public, which made me what I am today. No one has yet charged me with head enlargement. I feel proud of my success, and in my success congratulate American cyclists on the brilliant future prospects of sport, trade and good roads."

Before his departure the REFEREE man asked Col. Pope about the reported political preferences that had been tendered him by Massachusetts. "Yes, it's true that I have been approached regarding the governorship by both parties, but as long as my brilliant young friend, William E. Russell, will contest the position I will not allow my name to go before the people, for he is one of my closest friends and a warm friend of good roads. We will have 1,200 miles of new or improved roads in Massachusetts next year. As regards the office of senator from the state, I have been urged to bid for that, but there is plenty of time to think about it. As for the mayoralty of Boston, I would not accept the position or listen to any proposition. I don't want to be associated with a lot of cormorants. No political office can give me the honor that my effort for good roads has, and both political parties are my friends. Good bye."

The colonel said all the above in fifteen minutes, as he in turn stood in oratorical attitude in the center of the office, leaned on the office desk, and lay full length on a sofa. Colonel Pope is right when he says no political honor can equal that which good roads will and is bringing him daily. Of all his triumphs in life his good roads movement overshadows them all. It will be as lasting as Bunker Hill. Stephen B. Elkins this summer said, speaking of Colonel Pope: "Of all men whom I ever met, the meeting of the man who is responsible for this good roads agitation gave me the greatest pleasure. He is doing wonders for his country and civilization, and building for himself a monument in the hearts and minds of the nation that will not fade away."

The M. A. C. in Trouble.

The REFEREE last summer called attention to the professional aspect of the Manhattan Athletic Club, through its small army of racers, and the attempt to match professional pugilists by the club's captain. Only last week we were informed that this club paid considerably more than a small proportion of the entire fees of its amateurs the past season, and this fact is known to the racing board, the official handicappers and others whose business it should be to call

attention to the violation of amateur racing rules. The metropolitan dailies the past week printed columns of stuff about the M. A. C. and its fine home being in possession of the sheriff, and openly charged that as much as \$25,000 was due creditors, yet no one has thought fit to deny those charges, which are anything but complimentary to the organization. Names of creditors were given and the matter was the talk of athletic New York. A good joke is going around about Carl Hess, one of the club's imported racing men. The Teuton heard that the treasury was low, so with great foresight put in a bill for \$120, expenses incurred in training and eating, of course. "We will look over your account and give you a check," said the cashier. "No, no check—the money," said Carl, who had heard that checks of the M. A. C. had to wait sometimes. The next day he was handed a statement which rattled Carl more than any race he ever rode. It was a bill for "feed, etc., \$127; balance due club, \$7." Carl swore in both English and German, principally in

more; then D. E. Miller, president of the Springfield Bicycle Club, and last came Recorder Boardman. What a gathering of cycling brains! Egan looked chipper, and, indeed, Quaker City air seems to agree with the Gothamite, notwithstanding he lives right alongside a graveyard. Egan says when he is in a hurry in Philadelphia he takes pedestrian exercise, but if he has plenty of time he takes the lightning Philadelphia horse-car. "Aranza" thinks that cash prize league is a sure go; also that tour of inspection car. He says that there will be some lofty tumbling among the prophets some of these days, and that pneumatic scheme No. 4 is a hummer. Egan did not say that he came over to see Col. Pope. I do. Frank slipped slyly away when lunch was talked of—he took lunch with the colonel. Now, you prophets, prophesy again!

President Miller, who looks like John Wanamaker before election, came to town to attend a wedding. Wilson is now a theatrical manager, being assistant manager of Francis Wilson's com-

THE ROAD QUESTION AGAIN.

Chicago Citizen to Farmer: "You have my heartfelt sympathy."—Inter Ocean.

the latter, as he said, "I pay you next season." The *Evening Sun* said to day:

Yesterday Walton Storm, treasurer of the Manhattan Athletic Club, went to the sheriff's office and paid \$1,800 with costs which was the amount of a judgment obtained against the organization by Wales F. Severance, who represents Bourke Cockran for J. Broadhead Woolsey, of Newark, to whom Frank Glover & Sons assigned their claim. The Mannhattans have been gaining considerable unenviable notoriety over several judgments which have been obtained against them lately, and this one in particular. Mr. Carr, who is president of the club, is said to have called Mr. Severance an offensive name, and the result is that there is not a little indignation in the Madison avenue club house over the way in which the affair has been settled.

The officers of the club emphatically deny that it is insolvent, but it is plain that things are not going on as prosperously as the members would like. There is a rumor around town that a number of members are considering the advisability of taking steps to secure a reorganization.

A Notable Quartette.

There was at one time in the REFEREE eastern office last Friday, four men who would be hard to match in cycling. First came Frank Egan, editor of *Sporting Life*; then Guy P. Wilson, of Balti-

mony, although he could have had a decent reportorial berth on the *Sun*. Guy P. wanted to meet Frank Egan, so the opportunity came on Friday. Willis B. Troy also dropped in later, and the air was full of Sanger, Zimmerman, car, cash prize league, and what not.

Illinois C. C. Notes.

The Illinois Cycling Club now has 285 members. Only five associates remain. Death and resignation has reduced the number of the latter and none are admitted now.

Nominations for officers of the club are by ballots deposited in the secretary's hands between Nov. 16 and Dec. 6, this year. True L. Sloan for president and C. R. Street for vice-president will receive unanimous support it is thought. W. A. Davis has declined to run for any office.

The club has offered a series of prizes for the highest runs in bowling, billiards and pool during the period from Nov. 1 to Dec. 2, such runs to occur in competition.

A SERMON ON "BICYCLES."

Rev. C. W. Hiatt's Interesting Talk to His Congregation.

At the Congregational church last evening a sermon was delivered on "Bicycles" by Rev. Caspar Wispar Hiatt. On the right of the platform was a ladies' wheel and to the left a gentleman's, and the headlights on both were brightly burning, says the Kalmazoo (Mich.) Telegraph.

After the usual devotional exercises the pastor said: "I make no apology for these wheels on the platform, the most perfect, the most useful machine in existence. The eye with which we see is a cycle, the mouth with which we speak is a cycle, the sun and the moon are cycles. There are cycles of society, politics, religion, the band of gold which unite two hearts, is a cycle. The very nature of man is a cycle." Mr. Hiatt thus spoke of the advantage of the wheel over every other means of exercise, and in point spoke as follows: "Theshop hand, clerk, stenographer, with the color all gone from the cheeks, mount the cycle and glide over the roads for an hour, taking the most perfect exercise ever invented, and return with the bloom of roses in their cheeks, the blood bounding through the veins and the mind fresh and invigorated, which causes the rider to exclaim in the height of his exhilaration, 'The world is mine!' The improvement in the mode of traveling was then spoken of at some length, and Mr. Hiatt said: "When the high wheel came into use and the owner of one wished to take a trip, he must lay in a supply of court plaster, Pond's extract and bandages. He starts on his journey and must keep his eyes continually on the ground, and a small stone or a hole will occasionally bring him from his high perch thoroughly demoralized. With the safety the rider can look about, see the beauties of nature and have no fear of such accidents. A narrow tire will do for boulevards, but for common roads a broad tire is necessary. Some men are broad-minded, others narrow. God intends you to travel the common road, therefore the tire of your character and your life must be broad. There is a growing tendency among the American people to be broad." After some anecdotes and illustrations of great men, and a tribute to the noble Grant, Mr. Hiatt continued: "He that coasts must climb. Coasting is the poetry of bicycling. Coasting in life some men are able to put on the brake and stop their progress to perdition, while others plunge headlong, and when the speed gets to a certain height, the brake refuses to work and the coaster is lost. 'He who coasts must climb' in life's journey as well as on a journey with the wheel, and when once the bottom of the incline is reached, one must push or drag the wheel up the other side until a level or another downward incline is reached." The bent pedal was spoken of in connection with the wheel and of life, "A bent pedal of a wheel can be repaired by a blacksmith. A bent pedal of life must be repaired by God, and God's workshop is always open ready to repair the bent pedals of life."

Mr. Hiatt closed by saying: "Keep a bright light burning on your bicycles of life and this will assist you in the dark roads of trouble. There is a bright light from the divine countenance of God which will guide and light you if you will but follow it."

The Central Cycle Manufacturing Company, Indianapolis, is very much gratified over this season's work. Out of 2,000 Ben Hur's made 1,800 have been sold. The models for '92 are out and are a credit to the concern.

Australian Racing.

Racing is now in full blast in Australia and the great event of the year, the Austral, has just been held. Among the entries for the Austral are Jack and Harry Rolfe, the two old Birmingham professionals, who have been manufacturers in Melbourne for several years. Tom W. and J. W. H. Busst, the noted Australian champions are not entered for the big cash in the Austral, but are both in the championship event. The Melbourne Standard of Oct. 4, says: Last Saturday evening entries closed for the Melbourne Club's seventh annual spring meeting, and the result was in every way satisfactory. The Austral wheel race totalled fifty, ten less than the previous year. This reduction is mainly due to the event being run upon hard tire ordinary machines, and the exhibition track being closed against training. Had the great race been open to the more modern mount, the entries, without a doubt, would have been fully 50 per cent larger. This season there are many new entrants who partly make up for several old riders who have dropped out, the most noticeable among the latter being Tom Busst, who is perhaps the greatest rider Australia has ever had. The chief event for the second day, the one mile and a half safety race, which has attracted no fewer than seventy-four en-

tries, includes all the finest riders that could be possibly got together. For the championship of Australia there are eighteen entries, including Tom Busst. This splendid field ought to produce one of the grandest scratch races ever witnessed on the M. C. C. ground. All the minor events are exceptionally well filled, bringing up a grand total of nearly 450—an entry which the club may well be pleased with.

Asbury Park's Programme.

ASBURY PARK, Nov. 19.—The Asbury Park Wheelmen have completed every arrangement for their annual Thanksgiving day races. Seven events are on the programme, including a one-third mile novice race, two-mile handicap for A. P. W. members, two-mile Monmouth County championship, mile scratch, open, two-mile handicap, open, and 3:20 class race.

Sanger vs. Zimmerman.

The *Sporting Life* contained a lengthy letter from Willis "Buncombe" Troy, the premier inducer, in which he endeavors to give the public all the inside facts concerning the proposed race between Sanger and Zimmerman. As there seems to be some misunderstanding regarding the details connected with the proposed match, the following letter is published for the purpose of setting things right:

MILWAUKEE, Wis., Nov. 21, 1902.—WALTER WARDROP, care of Chicago Tribune—Dear Sir:—Enclosed we hand our Mr. Bolte's certified check for \$500, as our portion of a \$1,000 prize to go to the winner in a match race between W. C. Sanger and A. A. Zimmerman, the races to be one

mile, two miles and five miles, the winner of two out of the three events, all of which are to occur on the same day, to take the prize; the race to be run preferably within six weeks from this date in any suitable locality, as we are not particular as to the time and place.

In the matter of a \$10,000 wager, we will say that this is an entirely different proposition on the part of some of Mr. Zimmerman's friends, and not being sporting or betting men ourselves in any sense, we will simply be obliged to show these parties that there is plenty of Sanger money in Milwaukee, and we beg to give assurance that the Zimmerman contingent will be promptly accommodated. Yours truly,
P. H. SERCOMBE,
F. H. BOLTE.

Contains Good Talent.

The Lake View Cycling Club, 1749 Wrightwood avenue, Chicago, now has, after three years' existence, nearly a hundred members and aims to be the leading club of the north side. This lively young organization has held more road races the past season than any three local clubs combined, in this way developing much talent. A majority of the races have been five miles in length, in all of which Gus Steele has won the time medal in less than fifteen minutes. Other likely young flyers of the L. V. C. C. are Joe Stillwell, Anton Helmich, H. O. Fox and Will Callan, who will comprise next year's team and be placed in the hands of a trainer this winter. The road races were of weekly occurrence and starting from Graceland and Evanston avenues, invariably drew a crowd of 300 or 400 people. The club has a racing board, the chairman of which is the captain, which does the handicapping by a system of its own, advancing the men from class to class after each race. The club brought forth J. B. Woolas last spring, who captured the Pullman, and H. O. Fox, who ran into third place. Many other members gained good positions at the finish. The REFEREE's life-size pictures of winners of the Pullman races since the inception of the great event, offered to the

club whose representative won the contest, adorns the front room mantel of the club house, which is a model of comfort.

Three Promising Men.

Julien Bliss, known as the American Ede, is like his namesake, a little fellow, yet he gets there, also like his namesake. Julien has won thirteen first, twenty-three second and nine third prizes this season, footing up in value to a total of \$4,500. The prizes withheld at Baltimore and elsewhere, by order of the racing board, are not included.

Roy Keater was one of the products of this season. For him it was a most successful one, eleven firsts, seven second and fourteen third prizes falling to his lot. The total value of his winnings was \$2,700.

C. W. Davis has won prizes to a total value of \$1,200 this season, and was not on the circuits eastern or western, although he attended a few of the meets of the latter. Had he been able to spare time from the piano business, his winnings would have been quadrupled. He won seven firsts, two seconds and seven thirds. He says the height of his cycling ambition was reached when he was put on scratch with Zimmerman in the half-mile handicap at Washington Park. His tying Zimmerman's world's record of 27 sec. for the flying start quarter warranted this.

Johnson and Ballard Score at Atlanta.

ATLANTA, Ga., Nov. 19.—Two bicycle events were run here to-day in connection with the Atlanta carnival, and J. S. Johnson and E. W. Ballard furnished some exciting finishes to 500 enthusiastic spectators. Ballard, from the thirty-yard mark, won the mile handicap, and Johnson beat him by a foot in the half-mile open. On account of a

very heavy track the time was slow, but the men worked hard. Jack Prince won two half-mile heats against a trotting horse. Although his time was slow the veteran professional deserves credit.

A Successful Racing Man.

Charles M. Murphy, familiarly called Charlie to distinguish him from Billy, his well-known brother, has been more than ordinarily successful the past season. Murphy is a member of the N. Y. A. C. and the K. C. W. and is a game and graceful rider. His principal races the past season were: Washington, D. C., L. A. W. meet, two seconds; Baltimore, first and third; Philadelphia, second; Birmingham, Conn., first and third; Boston, two fourths; K. C. W. fifteen-mile road race, won race and time prize, breaking ten and fifteen mile road record; Springfield, first, second and a third; Philadelphia, first and a second; York, Pa., first and two seconds; Baltimore, two firsts; Reading, first, second, third and fourth; Philadelphia, first; Spring Valley, N. Y., first and second; N. Y. A. C. games, second; Waverly, third.

General Race Notes.

The Spokane C. C. is making arrangements to build a track.

The Savannah (Ga.) wheelmen have organized a track association.

The wheelmen at Westchester, Pa., are to have a track all winter, as the circle at the Tattersall has been engaged. Probably a meet will be given in January.

It has been decided by the Metropolitan Association of Cycling Clubs to abandon the idea of having an indoor meet at Madison Square Garden this winter.

The Rockford (Ill.) cycling fraternity thinks it has in Dever, Budlong, Armistage and Catlin a team of racing men which will hold its own against "the Chicago and other western cracks."

At the indoor games of the Manhattan Athletic Club to be held at the Madison Square Garden Saturday evening, there will be three bicycle events. These consist of half-mile novice, one-mile handicap and two-mile handicap.

The Centaurs of Baltimore, after two postponements, managed to run off their road race on Friday last. Frank Curry won the race, time prize and championship medal, with Ed Eisenbrandt second. The race was run on the Shell road.

G. A. Hanson has just broken the St. Paul-Stillwater record, doing the distance in 49 min. 30 sec. He left St. Paul at 8:30 and reached the Elliott House, Stillwater, at 8:52 1-2. A gold medal had been offered by the hotel man to the first person to cover the distance under fifty minutes.

MILWAUKEE, Nov. 21.—The Milwaukee Wheelmen's indoor race meet at the Exposition building Thanksgiving afternoon and evening, and Friday and Saturday evenings, will be largely attended. A number of prominent Chicago riders have kindly consented to participate, which will make the races very interesting.

The Acme Wheelmen, of Oakland, Cal., held a 25-mile road race Monday (13th) around the San Leandro triangle. There were seventeen starters, Bell, Pickard, Falkner on the scratch. Harris was given eight minutes' handicap; Cooly and McDonald were given eleven minutes. Grant Bell won the race, also the coast record for time, beating Foster's record by 50 sec. Bell's time was 1 hr. 20 min. 43 sec. Harris won second and Pickard third.

'T WAS INTERESTING, INDEED.

Cyclists Play Indoor Ball With Effective Results.

Last Thursday evening two ball teams from the membership of the Lincoln Cycling Club fought nine desperate innings in Klare's Hall. They may be termed the Tilts and the Guineas for the sake of team nomenclature and distinction, and it is probable that the entire Terpsichorean Bacchanalian history of that famous floor, including the pretty parties of the "Merry Seven," the "Daisy Club" parties, the fifty-cent receptions and fancy-dress (?) carnivals never claimed anything half as enjoyable as

May behind the bat the game was ready and Frederick Tilt raised his bat to swipe one of Guinea's underhand relics of 1882 clean out at the gallery window. He didn't do it, for Lennie at left short was as impregnable as the wall of Windsor Castle, and he put his face against the ball and bunted it to first.

Then Slusser, the catapultic pitcher from the Swift company, waited for an easy one and batted the ball into Peoria territory and it didn't get out again till Slusser was at first.

He stole second while Niesz was waiting for four balls and slid upon third while Servoss was away looking at the batting list.

Niesz got his base on balls and Slusser scored when Guinea pitched the ball at the ceiling.

Niesz was then on third waiting for a two-bagger or a squabble to get him in,

CHARLES M. MURPHY,
Kings County Wheelmen and New York Athletic Club.

the ball game Thursday night. Fred Patee was imported from Peoria, with the red rim around his face; Lennie was engaged at fabulous figures, and Herrick was signed as a mascot to complete the burning trio that would plays in Guinea's collection of quaking giants.

Guinea himself was nervous, for Patee was signed to play right short, with "Pa" Servoss on third, and neither one of them had ever seen a game before.

Darlmunder Morris stood out in center field like an old iron pump in dry weather, and he too had only "heern" about the game. When the flies were not bothering him he sat on the faded plush divan at the far end of the hall, where the queen of the evening or the lady in pink generally rests between waltzes. He was absolutely cool and at ease.

Radell—Antonio, he of wheel-building fame, held down the sand bag at second, and was said to have an eye like a stuffed eagle.

After Bigelow had been planted on first, Altman in left field and George

but he was compelled to get his run on a wild pitch.

Gunther went out before he could get to Bigelow's station at first and Brown was just as easy.

Then Guinea's rare birds came to the plate and make four runs.

Morris got his base on four strikes which seemed to the umpire like balls, started for second before the pitcher had swung his arm, was put out at third and again near home plate, but the umpire didn't care to be too harsh and the run counted.

Radell had in the meantime executed a long drive to right short and when the smoke cleared away was on third. He came in when Lennie fouled out and added one more run to the score.

Alman got out so palpably and so inexcusably between the plate and first that the umpire called him in.

Then Servoss came to the bat. His swing was not vicious, but mighty, and, although he did not hit the ball at third strike, he scared catcher Tilt into dropping it and that landed Servoss on first. The second baseman did not catch him

more than three feet from the base, his capture of third was as flagrant a steal as was ever known and he scored while the catcher was dusting off the plate.

Bigelow and the umpire had meanwhile got around to third. He scored while the catcher was paying his fine to Herrick.

Then Guinea struck out. It was almost an impossible thing to do when the umpire didn't want him to, but he did strike out.

The Tilts got fourteen runs, with a net credit of four by the umpire in the third, two more in the eighth; but the Guinea men got two in the sixth and three more in the ninth, winning the game.

Patee made the winning run. He was on third when the responsibility he bore was made known to him.

A run was needed. He spat upon his shoes, assumed an attitude like that of a man who starts in a hundred yard dash. Servoss, Lennie, Morris and Radell got behind him, ready to push like a V rush at Yale. Then they waited until May had struck out and the situation was desperate, when Lennie gave the signal — "Broomelaw—Balmoral—4-11-44" — and they pushed Patee over the plate.

Tilt was there with the ball but forgot who the runner was and touched the umpire by mistake.

Herrick then touched all the players for the amount of their fines for kicking, and the game was ended.

Following is the score:

Guineas	4 0 0 0 0 2 0 0 3-9
Tilts	2 0 4 0 0 0 0 2 0-8

* * *

Whist League at Buffalo.

There is some prospect of a whist league being formed in Buffalo. This suggests the following: Let one of the older clubs, which is centrally located, the Ramblers for instance, issue invitations to a certain number from each of the other clubs for a progressive euchre party, have a light luncheon, coffee, sandwiches and cake, and offer two prizes, a grand and a booby, and see if a very pleasant evening would not be the result. The Ramblers' club suggests itself because it is easily reached, has pleasantly arranged rooms, is well officered and in a financial condition to make a start of this kind, besides being one of the oldest clubs. Let the other clubs follow suit and have these meetings once or twice a month, everyone would have a jolly good time, all would become acquainted and the expense would be very light.

* * *

Opened Its New Club House.

The Massachusetts Bicycle Club opened its new house, 6 Batavia street, and a jolly evening was spent in inspecting the furnishings. There is no club in Boston that compares with this one for beauty of furnishings, location and conveniences. The new home has been selected and furnished since Columbus day, and the fact that it was ready for occupancy on the opening night speaks volumes for the energy of the furnishing committee, B. A. Atkinson, A. D. Peck and Mrs. G. A. Larcher. This club is one of the oldest in the country, having been organized in 1879. A silver water set, presented the club in 1882 by the Citizens Bicycle Club, adorns the table. Only eleven members organized the club, and now there are several hundred names adorning the membership roll.

* * *

The Hartford Feast.

Down Hartford way they never do things by half, and the banquet of the Hartford Wheel Club last week was no exception. The affair was given at the Allen House, and at 9:30 a hundred prominent wheelmen gathered at the tables. The club's president, L. A.

RELIABLE AND POPULAR WHEELS---MONEY MAKERS, TOO.

We Are Ready to Talk 1893 Business. ARE YOU?

OUR SLATE IS—

MADE UP FOR 1893.

RUDGE CYCLES (highest grade), manufactured in the American Branch Factory, under our own supervision, from the invincible ball bearings, forgings, etc., direct from the parent Rudge factory. As exclusive manufacturers and importers we solicit trade throughout the United States.

SYLPH CYCLES (highest grade, spring frame), manufactured by the Rouse-Duryea Cycle Company, Peoria, Ill., in which company we own a controlling interest. Agents wanted everywhere.

OVERLAND CYCLES (medium in price, high in grade). Our own manufacture and exceedingly popular with the trade this season. Agents wanted everywhere.

WESTERN WHEEL WORKS' LINE. The most popular and by far the most satisfactory line of medium priced wheels ever offered. We carry an enormous stock from which to fill orders promptly. We can supply the largest at Bottom Prices. Agents wanted in the west.

JOB LOT AND SECOND-HAND. Under this head we offer some exceptionally fine bargains in good wheels at low prices.

SADDLES AND SUNDRIES. We have the exclusive sale of the Sager in the west, also carry a complete line of sundries, many of which are our own manufacture. We name bed-rock prices on these goods. Catalogue Free. Correspondence solicited.

ROUSE, HAZARD & CO., 89 G St., PEORIA, ILL.

OLDEST AND LARGEST JOBBERS IN AMERICA.
—ALSO MANUFACTURERS AND IMPORTERS.—

SYLPH CYCLES!

What an Enthusiastic Rider Says of Them. Many other Riders Have Expressed Themselves Likewise.

ALBANY, N. Y., Nov. 4, 1892.

ROUSE-DURYEA CYCLE CO.—GENTLEMEN: The Diamond Spring Frame "SYLPH" purchased this season (through Godfrey's New York agency) I can not praise too highly, taking a view from a mechanic's standpoint. I am certain it is the most perfect construction that can be made with two wheels, the crowning feature of which is the Three Part Frame, the parts so pivoted and hinged at the pedal shaft, and the springs so placed as to make the springs and hinges work in unison, thus furnishing the most luxurious, easy riding, and in my opinion, the most durable machine made, for the reason that what "lets up easy" on the rider must necessarily have a similar effect on the machine. It certainly is a great pleasure to ride the Sylph, even on the roughest roads or cobble pavements, of which we have an abundance here. It has been thoroughly tested on some of the steepest grades in the city, and for hill climbing is simply immense. Nearly 100 different persons have tried my machine and it has proven a revelation to every one. The expression of satisfaction on their faces when dismounting speaks louder than any words. Several of them (owners of the stiff frame "Ice Wagons") have signified their intention of buying the Sylph for their '93 mount. I am convinced before hand that the Sylph will be decidedly "in it" next season.

P. S.—Mr. Ed. W. Phillips, manager for Leslie & Co., fully indorses what I have said, and says in addition that he can make a run of from 50 to 100 miles on the Sylph with less fatigue than he can ride ten miles on other—so-called—strictly high-grade machines without springs.

Agents wanted for 1893. For catalogue and further particulars, address

ROUSE-DURYEA CYCLE CO.,

89 G Street, PEORIA, ILL.

Tracy, Mayor Hyde, George H. Day of the Pope company, Gen. H. C. Dwight, A. Kennedy-Child, Col. Burdett, P. D. Oakey and other speakers sat at the end of the dining hall. The pages of the menu were cut in the shape of the club's emblem, a flying heart; the covers were in polished white and tied with purple ribbons, these two being the colors of the club. On the front was the seal and on the back the club's monogram. The following toasts were responded to, President Tracy acting as toastmaster: "Our Country," Henry C. Dwight; "City of Hartford," Mayor Hyde; "The Wheel as an Educator," A. Kennedy Child; "Our Country's Defense," Lieut. Harold H. Eames, U. S. N.; "What the Division Needs," Col. Charles L. Burdett; "The Clergy as Wheelmen," Rev. George R. Warner; "Our Guests," P. Davis Oakey; "The Ladies," W. C. Marion, Jr.; "Song of the Wa-Who-Wahters," E. C. Wilson.

Social Doings at Grand Rapids.

GRAND RAPIDS, NOV. 21.—On Wednesday of this week the Grand Rapids Bicycle Club will hold its first smoker of the season. It promises to be the best one ever given by the club. Last Friday evening the club gave a pedro and dancing party at the club rooms. About fifty members attended and an enjoyable time was experienced by all present.

P. S. Hunt has resigned as treasurer of the G. R. B. C. on account of pressing business.

The athletic entertainments given by the Grand Rapids Bicycle Club have proved very successful in every way. President Taylor has appointed Ed Peck, Leo Andres, Miss Cora Stebbins, Mrs. W. B. Folger and Miss Carrier to act on the entertainment committee for the ensuing year. F. N. Hyman, A. I. Saliers and William Pertorious have been appointed as the house committee.

The entertainment committee says it will have a fine programme made for the season, consisting of smokers, dancing parties, pedro, etc. HAL.

Chicago and Vicinity.

This Saturday evening the Lake View Cycling Club's cinch tournament continues.

The Wicker Park Cycling Club is located in a well-apportioned house at 46 Potomac avenue.

Much amusement was afforded at the Ravenswood Cycling Club last Monday evening when a turkey raffle occurred. The lady members proved good gamblers and frequently carried away the prize.

Wednesday evening the Chicago Cycling Club's annual turkey raffle occurred. The usual number of turkeys and other prizes went at good figures, a good entertainment was provided and luncheon spread.

"Nearing Barnet I saw the trail of a miniature traction engine on the road, and scented at once a corrugated tire" This is the way "Eftibe," [F. T. Bidlake] in *Bicycling News*, puts it. Miniature traction engine is good.

Slipping evidently worries our friends across the water, for about this time they usually put a "non-slipper" over their tires. Chicago men ride the year through, but we do not hear of any great amount of slipping on "greasy" roads.

A most successful programme of amusements, card parties, dances, etc., is being promulgated by the Ravenswood Cycling Club. Not unfrequently no less than thirty-two couples participate in the progressive card games. Two more evenings' playing remains to be played. John Watt now leads, with twenty-one points to his credit. The prizes are ele-

gant and costly and are awarded for excellence in the series.

The Cook County Wheelmen gave a wine banquet to the members Thanksgiving eve. P. D. Fenn was toastmaster. The speakers of the evening were F. B. Hart, "Military Cycling;" P. Moore, H. B. Davis, C. G. Sinsebaugh and W. L. Whitson.

Saturday evening, Dec. 3, the Englewood Cycling Club gives what will probably be the greatest cycle raffle ever held in this city. The leading prize is a James safety, the second a gold watch worth \$50, and thirty-six other prizes, ranging in value from \$2 to \$25, a grand total of \$490.

Thursday evening next the Lincoln Cycling Club gives a full-dress reception at the Lincoln Park Refectory. The Lincoln's stag entertainments are noted the world over for their originality and great success. They desire to carry this reputation as regards these social entertainments.

At the Plzen Cycling Club house Wednesday evening a hundred turkeys, more or less, were raffled. An entertainment was provided. The Plzen club, though little heard of, is gradually increasing in membership, now numbering over seventy residents of the southwest section of the city.

This Saturday evening the Englewood Cycling Club gives a house-warming, the opening of their new home on Sixty-fifth street near Wentworth avenue, a description of which appeared in the REFEREE several weeks ago. The club membership is now 225 and is expected will be 300 before Jan. 1. The new home cost \$10,000 to remodel from what was once one of Englewood's mansions. Over \$2,000 has been expended in furniture. The fine, large gymnasium, 50x55 feet and 18-foot ceilings, is now completed.

An instructor will be employed, and there will be classes all winter.

About the Country.

The annual pool and billiard tournament of the Brooklyn Ramblers began Wednesday night.

The second annual ball of the Helena (Mont.) Wheelmen was announced for Thanksgiving evening.

The Alameda B. and A. C. held a dancing party on Monday of this week at the pavilion at Bicycle Park.

The Peoria B. C. has on its programme a hard times smoker for Thanksgiving eve and a card party for Nov. 29.

The Lakeside W. C. of Cleveland, opened the season last week with a ball, and now a pedro tournament is on.

The annual dinner of the Manhattan A. A. wheelmen, postponed from Nov. 12, was announced for Wednesday evening of this week.

The Ramblers W. C. of New Haven, Conn., has moved into its new house at 55 Orange street, and will soon hold a house warming.

Friday night last the Manhattan B. C. held the first of a series of subscription receptions at its club house, Fifty-ninth street and Broadway.

The Philadelphia clubs have scheduled fairs for the coming month, the Park Avenue Wheelmen the week of Dec. 5-10, the South End Wheelmen 10-17, and the Quaker City Wheelmen 12-17.

The club committee of the Rockingham B. C. of Portsmouth, N. H., is making early and extensive arrangements for the twelfth annual supper at the Rockingham House. A history of the club has been prepared to be illustrated by the aid of the stereopticon from transparency slabs developed by the lantern slide committee of the club, picturing the princi-

Drop us a line and get acquainted. If

Tire, write us and we'll tell you.

H. A. LOZIER & CO.,
CLEVELAND, OHIO.

pal events of the life of the club from its organization to the last races and lantern parade.

The Capital City C. C. of Springfield, Ill., has named Joseph Murphy, J. P. Fogarty and Edward Hartman as an entertainment committee and an elaborate winter's programme is being prepared.

The South End Wheelmen of Philadelphia held a drawing for a high grade safety on Saturday evening, the winner being a traveling salesman from Cincinnati, who purchased a ticket while in the city.

Parker H. Sercombe, of the Sercombe-Bolte Manufacturing Company, gave a banquet Monday night at the Pabst Hotel, Milwaukee, in honor of Cyrus Williams and Elmer Grey, the European cycling tourists who have just returned home.

The Peoria B. C.'s first party of this season was held Wednesday evening of last week. The club house was handsomely decorated and a large number of members and friends attended the first of a series of fashionable and enjoyable parties.

The Bedford Wheelmen have moved into their new quarters at 84 Clymer street, Brooklyn. Future events are a stag party on Dec. 16 and an entertainment and reception early in January. The club will hold regular monthly stag parties and a pool, whist and euchre tournament during the winter season.

This is Frightful!

It has been found that bicyclists who ride to excess, are afflicted with a catarrhal laryngitis. Mouth breathing and the rapidity and pressure with which large quantities of air are forced into the larynx are said to be the cause.—*East Palestine (O.) Echo.*

Claud King, representing *Sports Afield*, Denver's monthly publication, was in Chicago last week.

Fire last week nearly destroyed the club house of the Kings County Wheelmen in Brooklyn.

At Mobile, Ala., the Shell Road Scorcher is the title of a new club. L. B. Auner is the chief scorcher.

John Hertz was sentenced to two years' imprisonment last week by a California judge for stealing a bicycle.

Great preparations are being made for the good roads convention to be held at St. Paul Jan. 25 and 26. It is expected that Mr. Potter will attend.

Thanks, REFEREE. Your clever caricature of our piano contest isn't bad. But you hurt the feelings of some of our readers.—*New York Recorder.*

The first number of the *New Orleans Sporting and Dramatic News* has made its appearance. It consists of eight pages about the size of those of the REFEREE. Two columns are devoted to cycling.

Six young men now have cards reading: "George Jones, cyclist." It will now be in order for the man owning a horse and buggy to have cards reading: "William Smith, buggyist."—*Detroit Journal.*

In some way unnoticed, in repairing the wainscoting in the reading room of the National Hotel, at Peoria, a board, evidently a part of a sample case, bearing the words, "Perfection Cycles," etc., has been slipped in and never painted.

There it remains a free ad. for the manufacturer.

Even the staid old *Bi. World* will issue a holiday number, which will appear the first of the year, combining both the Christmas and cycle show numbers. *Cycle Items* of Winona, Minn., will also have a special number. *Cycling* of Philadelphia will issue a large cycle show edition.

The Sioux City (Ia.) C. C. filed a suit last week against E. L. Webster to compel the payment of \$22. This amount, it was claimed, was subscribed as a portion of the guarantee fund for the division meet, held in August. Webster claims H. S. Rounds put his name on the list without authority.

Friday the newly organized New York Press C. C. elected the following officers: James E. Sullivan, president; E. A. Franks, secretary; F. R. Madeira, treasurer; L. O. Boardman, captain. The constitution and by-laws have already been adopted, and in a few days temporary club rooms will be secured.

Paul Angois, of the Raleigh Cycle Company, accompanied by his wife and daughter and Arthur Atty, sailed for England last week. Mr. Angois worked hard in fitting up the company's factory, and in the work he forgot that the American climate did not suit him. Mr. Atty will not return to his former position in the home factory, as reported. He will enter the employ of another firm.

Rouse, Hazard & Co. are very proud of the fact that five of the veteran L. A. W. men in the state of Illinois, half the total number in the state, are employed in their store. H. G. Rouse, No. 6, is the employer and A. L. Atkins, No. 133; C. F. Vail, No. 241; Fred Patee, No. 242 and C. E. Duryea, a partner are the others. All proudly bear the veterans badge. Chicago has the other five veterans.

Another Congressman in Line.

The congressmen and legislators generally are little by little declaring themselves in favor of legislation which will aid in the improvement of the highways. Several have expressed their views on the matter, and under our eastern department heading will be found a column on the subject. Congressman Post of Galesburg, Ill., writes Fred Patee as follows to thank the wheelmen for aiding in his re-election:

I have learned from several sources that the wheelmen stood by me, and I intend to stand by them. My aim shall be to secure from Congress, as far as possible, national sanction of the good roads movement. The national government can do this without infringing the domain of the states. The United States government is making surveys for the purpose of completing a topographical map of the country. In this map can just as well be embodied the giving of information in regard to the location and construction of roads. I have introduced a bill for this purpose, and if it be passed it will be the initial step in the right direction.

Your organization should constantly aim to interest the farmers in the movement. They are more affected by it than you are. Together, you will force the government to adopt a general policy of road improvement which will save the country millions of dollars worth of productive energy every year and for all time. Again thanking you, I am, very sincerely yours,
P. S. Post.

Opens Business in Toledo.

The REFEREE has received the following, which explains itself:

TOLEDO Ohio, Nov. 21.—We take pleasure in informing you that Samuel Snell of Birmingham, Eng., has decided to locate permanently in Toledo, having engaged with the writer and his associates. A strong stock company has been formed for the purpose of manufacturing bicycle accessories and fittings, and Mr. Snell will commence active operations at once. It is his intention to return to import a sufficient quantity of lamps and sundries to supply his trade in this country until the new works in Toledo are in running order, which will be in early spring. Mr. Snell will continue his agency for Thomas Warwick & Sons, Ltd.; also for the Hudson & Co.'s tubing and Brooks' saddles. Very truly yours,
W. F. DEWEY, Treasurer.

BICYCLES AND THE TARIFF.

Agents Differ Somewhat in Their Views on the Question.

[From the Morning News Record.]

The magnitude of the bicycle business and the important feature of the number of bicycles, manufactured parts and accessories which are imported by American dealers direct the attention to the question of the influence of the tariff and the probable effect that a reduction from the present rate of 45 per cent would have.

The states have been invaded by foreign-made wheels ever since the demand was in its incipient stage and the English makers have always enjoyed a very fair share of American patronage. Antedating Americans in cycle making, they have furnished many salient points and do yet furnish the model on which many American makers pattern their products.

Demand for light-weight machines, so pronounced in the last year or two, has worked to the advantage of English producers, for they have ventured more toward the experimental condition of lightness and the concurrent strength so much coveted than have the manufacturers of this country. The lines, the wheel base, the length of head and other features of the modern safety have been largely copied, and with no concealment of such imitation, either, by American makers who desire to meet the reigning demand.

In all American cities of note the Englishmen have well-established agencies through which they retail their factory output, and as factors in competition they are recognized. As the late election presages a reduction of the duty on bicycles, the opinion of some of the importers and home manufacturers upon the result of such legislation is of some interest in the face of the unquestioned guaranty of more bicycle business in future than ever before.

Several of the Chicago dealers have been questioned as to the future of the bicycle business and their answers disclose opinions somewhat at variance upon the effect on prices and profits, but uniformly the same as to the thrift and progress of the trade.

Mr. Hughes, the manager for the Quadrant company, avers that the trick or science in making a bicycle has been reduced to a minimum and that differences that appreciably exist are those of quality; for the intricacy of modeling the several parts has been universally acquired. "The same conditions apply in the manufacture of a hat or a pair of shoes," said Mr. Hughes, "and the more exacting and fastidious the customer the more intricate the duty of the maker to minister to the wants of his customer.

"The inference is, then, that competition between American and English cycle makers has been mainly upon the line of quality of their wares and the race has been for supremacy in make or style and not in the direction of price. Demand has, and will for a long time, take care of the price.

"In the event of a reduction of the duty I believe that the people will derive

a benefit from the consequent admission of medium-grade wheels which in price will answer the demand of what might be termed the buyers at large, or those who would buy a wheel at \$100 but will walk before paying \$150.

"Generally speaking, the imported wheels have been handled at a loss, owing to the attempt to handle American business from offices in England, and of course the duty has been a factor, for it has necessitated economical methods in selling.

"The apparent attempt by means of high duty to almost exclude the foreign product of a trade requiring the most skillful manipulation of labor and material has not resulted to the benefit of Americans, because it has kept out everything but high priced goods.

"If Americans would pay, say, the Wolverhampton price for medium grades they could import the bicycle, pay the 45 per cent duty and landing expense and still have a better grade of the so-called medium grade than can be purchased in this country.

"For illustration, a child's wheel of American make, and very inferior, too, will cost very nearly as much as an average second-grade wheel in England for adults.

"Many American makers, in order to keep ahead of the great demand for medium-priced goods, have almost attained the impossible feat of turning out a 'factory-made' wheel; and I say impossible because the product obtained by a wholesale casting of parts and throwing them together cannot be termed a bicycle."

Mr. Marrett, of the Coventry Machinists' Company, does not anticipate any radical change in prices or quality of importations, but rather suggests, in the event of a low tariff, that greater importations and consequent greater competition means eventually lower prices, and that the dealers will sell more goods and accept smaller margins.

"The machinery," he said, "which here is much improved over that of any other country in cycle making, will allow a reduction in price; and improved machinery has been incited by high wages and big demand."

Mr. Reville, of the Pope company, says that the demand for high-grade wheels has been so great that the question of tariff and the effect of a 45 per cent tariff has not been taken much into consideration. Prices, he says, will not tumble until the demand slackens somewhat.

Horace Bell speaks for Humber interests and says that he is not afraid to meet competition in any form, and that if the emergency ever becomes one of free trade they will transport their base of operations and will meet American trade by means of an American built English wheel.

A. A. Taylor, of the Taylor Cycle Company would be willing to conform to a 30 per cent tariff on bicycles, but thinks American makers would suffer considerably under an unrestricted influx of English wheels.

The factory cost of a high-grade English-made wheel, including a fair percentage for selling expense, may be placed at about \$8 14 shillings. The arbitrary figure of £10 fixed by United

States appraisers is the amount on which the duty is assessed and the added amount to cover duty, carriage and charges is about 52 per cent of the factory cost, which brings it to £13 14 shillings, or about \$66 75.

By way of comparison the factory cost of an American-made wheel is estimated at \$60. It is argued, therefore, that the existing protection to American wheels is not far amiss and would be an influence to be prized in American cycle making; but there are those who do not fully accept the American figures, even though wages may partially uphold them.

The activity in cycle-making circles is already marked in anticipation of the coming year, and some few makers have even gone so far as to display their models for 1893.

Several English concerns which have been contemplating building factories in this country are said to be halting for the time to carefully gauge the future in the matter of tariff enactments.

THE TRADE IN PEORIA.

Four Firms Doing an Immense Share of the Country's Business.

Peoria has four great bicycle firms, or rather firms interested in the bicycle business, carrying it on in connection with farm implements and such goods. Rouse, Hazard & Co., owing to their seniority, probably did as much business as any two, or all of the other firms, the past season. Their second floor is devoted almost exclusively to bicycles, the department being in charge of Bert Myers, son-in-law now of Mr. Hazard. Charlie Vail, a veteran of the L. A. W., attends to the clerical work. Charlie is No. 241 in the veteran list, and does not bear the distinction alone, as four others are employed in this house, A. L. Atkins, 133; H. G. Rouse, 6; Fred Patee, 242, and C. E. Duryea, 260. This is half the total number of veterans in Illinois, the other five being in Chicago. Rouse, Hazard & Co.'s business the past season has more than equaled their expenditures. Their immense stock of ordinaries has dwindled down until now there are barely 400 left. Nine were sold one day last week, and at good prices. Their line the past season included Columbias, Victors, Ramblers, Sylphs and Western Wheel Works. The volume of their season's business could not be learned, as at the time of a visit they were hard at work on the inventory.

For next season they have the above lines and the Rudge, which will be manufactured by them at Peoria, where a factory is now being fitted out. The drop forgings and principal parts will be imported, the frame, wheels, etc., being made here. A sample of the Rudge road wheel weighed just twenty-nine and a quarter pounds. The racer, with a ball socket head, weighed twenty pounds, and would be the pride of any crack. Rhodes and Johnson are now riding these racers, and are at present at Nashville, with their weather eyes on the record tables.

Rudge wheels will be pushed this season from the Pacific to the Atlantic. In the volume of Western Wheel Works goods handled this firm heads the list. In regard to opening a Chicago house, they deny the rumor most emphatically, but say that the Rudge will be a prominent factor on the Chicago market next season. Red rims on the racers will distinguish them on the track. Fred Patee of this firm is rumored to have quadrupled the sales of any other cycle salesman the present season. Always genial and obliging, his friends are legion throughout the entire United States.

Mr. Rouse thinks the outlook for another season is very bright.

LUTHY & CO.

Luthy & Co. look forward to a very profitable season, and have decided to conduct their department with that idea ever in mind. Mr. Luthy, a most fluent talker and a careful business man, was seen. The firm has thus far contracted for one line, the Sanspareil, manufactured by William Andrews, Birmingham, Eng. For this they have secured the central and western states, and will shortly send their men on the road. The firm placed an enormous order but found that the manufacturer had difficulty in supplying home consumption. The gentlemen's wheel weighs thirty five pounds, all on; the ladies' with hollow rims, is slightly heavier. These wheels are magnificently finished in every way, and the workmanship is unsurpassed. Mr. Luthy said that in rendering a statement to manufacturers last season not one cent had to be charged up for repairs. A gentlemen's wheel was tipped up and the rear wheel set spinning. For seventeen and one-half minutes wheel and crank revolved, and for five minutes the wheel balanced backward and forward. Both front and rear wheels are twenty-eight inches. Other lines of wheels, high and medium grades, are in prospect, but none is ready for announcement. That popular traveling man, Eugene P. Blake, is employed with the firm.

KIRKWOOD, MILLER & CO.

This firm is at present at a standstill as regards bicycles or preparation for next year. Its line includes the Telephone and Kite, and probably these will remain the leaders another season. Frank Henning, manager of the bicycle department, has "done gone done it," having been married several days ago. Mr. Miller says Mr. Henning's wedding trip is to the east, and he is combining business with pleasure, selling wheels. Over 400 wheels have thus far been disposed of by this energetic and capable salesman. Henning was formerly employed by Ralph Temple at his Wabash avenue store. Mr. Miller called on him once to purchase medium grades. He did not buy, but carried away a splendid impression of the salesman who waited on him. Later he secured his services. The past season has fulfilled their fondest expectations, and next season's outlook is very bright. Kirkwood, Miller & Co. have a splendidly-lighted salesroom on the main floor, the repair shop being in the rear. A glance in the repair department gave ample evidence of an immense business in this line, three men being employed.

KINGMAN & CO.

In the great warehouse of Kingman & Co. Mr. Simonds was seen. The Peoria house is the main store, three others being equally as large. Over fifty traveling men are employed, not in the bicycle interest alone, but handling therewith other goods. Kingman & Co. handle a large share of the output of A. Featherstone—Road Kings, Road Queens, Duke, Duches, Prince, Princess, and all children's sizes. For the Centaur they have the western agency and expect to sell 2,000 wheels. For their eastern trade they are present building a factory at Hagerstown, Md., for the manufacture of the Kingman Scorchers, a light, strong and graceful safety. The past season was their first, but their business was twice as large as expected. This season the firm counts on selling a round 10,000 wheels.

Taken all in all, Peoria's outlook for the cycle business next season is very bright. With four firms carrying on an immense jobbing business all over the United States, one factory manufactur-

"IMPERIAL" HISTORY—

—THIRD CHAPTER.—

SO THEY RODE—

"IMPERIALS" in the East, the West, the North and South, and such was their pleasure, as to cause them to "crack up" the magnificent "IMPERIAL" to their friends. * * LET THEM TELL IT. We abide by their decision. The rapid growing army of "IMPERIAL" riders are our best friends, undoubtedly our most successful advertisers. "IMPERIALS" are built for the roads of to-day.

On the race tracks they usually get there!

On the hills they are unequalled!

They are staunch, yes; fast and handsome!

They are strong, light and elegant!

They are fully warranted in all directions!

Talk to the owner of an "IMPERIAL" and his hearty words of praise for it will direct your steps to the nearest "IMPERIAL" agency. 'Twas ever thus.

CHICAGO. MAKERS

Startling and Most Excellent—IMPERIAL WHEELS For 1893—Wait.

ing three popular wheels, and as great a lot of hustlers all around as ever graced the cycle business of any city, this little city's cycle business should swell to an immense volume this season, as it has in the past.

The Peerless Triangle.

The Peerless Manufacturing Company, of Cleveland, which makes the Peerless, is now thoroughly equipped in all departments, and expects to begin putting up wheels by the first of next month. The first wheel made, the lines of which are shown herewith, has been given a very thorough test, having been ridden by a number of Cleveland men. It weighs thirty-five pounds and all who have tried it say it is a perfect success. The company claims that the special design of the frame gives great strength by dividing the weight equally between the different members. Being unlike anything manufactured, it is the principal taking point. A light track wheel will soon be built on the same lines.

Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Edlinbaugh, patent attorney, Washington, D. C.:

486,106, vehicle wheel; Konrad Haussner, Ingolstadt, Germany; filed July 29, 1891; serial No. 401,033.

486,146, wheel for velocipedes; Frederick Westwood and William H. Butler, Birmingham, England; filed Feb. 9, 1892; serial No. 420,830; patented in England Feb. 11, 1890.

486,191, wheel tire; Robert Edlin, Leicester, England; filed June 23, 1892; serial No. 437,805.

486,197, saddle for cycle vehicles; Cyrus W. Saladee, Cleveland, Ohio, assignor to the Whittent-Godding Cycle Company, Providence, R. I.; original application filed Oct. 19, 1891; serial No. 449,306; divided and this application filed June 18, 1892; serial No. 437,200; patented in Canada June 23, 1892.

486,230, elastic vehicle tire; Richard P. Martinez, Brooklyn, N. Y.; filed March 18, 1892; serial No. 425,456.

483,294, saddle spring for velocipedes; George A. Perkins, Cambridge, Mass.; filed Jan. 13, 1892; serial No. 417,999.

The Lyndhurst in Chicago.

The Henry Sears Company will handle the Lyndhurst for Chicago and vicinity next season. Mr. McKee, of McKee & Harrington, the makers, was in Chicago Monday and placed the agency. The Lyndhurst is made in only one grade—the highest—and two weights. The roadster weighs 28 pounds, all on, but can be stripped to weigh 25 pounds. The racer weighs but 19 pounds. Mr. McKee says his firm will probably make between 3,000 and 4,000 wheels this season. The Lyndhurst is made without forgings, the head and brackets being of tubing. In this way lightness is secured, while the manner of lapping makes the frame as strong as it is possible to build one. The ladies' wheel is a double straight frame and weighs but 35 pounds.

Another Pneumatic Idea.

A Chicago man who has been working out an idea for a pneumatic tire thinks he has discovered something that will prove valuable. It is certain that the tire is non-puncturable, for the tread (A) is solid. The rim (D) is to be of tubing, two inches in diameter, with a longitudinal slot about three-quarters of an inch on the bottom side. A solid tire (A) straight on the sides, and slightly rounded on the top and bottom, rests against the air tube (C) and plays up and down through the slot in the rim, guided by the walls (B) about a quarter of an inch in height.

The inventor's sample was heavy, the rim being made of iron, but when made of tubing the wheels will be as light as those fitted with any pneumatic.

Where Imperials Are Made.

The new factory of the Ames & Frost Company, on Goose Island, is rapidly nearing completion, the roof having been covered this week. Machinery has already been set, although doors and windows are still unplaced. By Jan. 1 the factory will be in operation with 250 men on bicycles alone, while in the old and new factory buildings, which adjoin each other, nearly 500 men will be at work. Over the dingy, lowly shanties of Goose Island these immense factories loom up surprisingly high, but this is where Imperials are made, and despite the surroundings, the wheel is among the best in the world.

The Ideal Pneumatic.

H. S. Fuller of Passaic, N. J., representing the Phelps & Dingley Manufacturing Company, manufacturers of the Ideal pneumatic, was in Chicago last week. The Ideal pneumatic is fastened to the rim by a wire which is fastened to a plug at one side, crosses the rim and continues around it once, then crosses and continues down and around on the opposite side, passing the first plug, and

ing, while the top screw has a longer stem and is less liable to get lost. Any part of the valve can be replaced and the rider can carry parts constantly with him. The severest test given the tires under air pressure shows the merit of Morgan & Wright tires, whose racing weight, one-ply canvas, stood 125 pounds and road tire, two ply, stood 150 pounds. The new addition to the factory is now well under way. The offices will be located in this, together with the store rooms and part of the manufacturing plant.

An Important Tire Deal.

Phelps & Dingle, Passaic, N. J., makers of the Ideal pneumatic tire, closed an important deal with Col. Pope while the latter was in New York last week. The Pope Manufacturing Company, under license, will make the Ideal tire and give any rider the choice of the well known Columbia or the Ideal, which is an inner tube tire, and was fully described in the REFEREE some time ago. Mr. Phelps, who made the deal, is pleased that so eminent a firm will use his tires, which, as he said, "is a guarantee that our tire is good, for the Pope Manufacturing Company uses only first-class articles and material in its machines." Mr. Phelps says his firm has booked orders for 14,000 tires already, which surprises him won-

asked: "Do you keep the Beauty child's seat for bicycles?"

"No, we have none on hand, but I'm just giving the manufacturer an order. Henceforth we'll keep them," said Mr. Daly, and Mr. Sager booked his order.

Turning to the REFEREE representative he said: "That's the result of advertising a good thing." The Anglo-American company has ordered some of the Rich & Sager goods, to supply all who want them at wholesale.

Featherstone vs. Ormonde Company.

In the suit of A. Featherstone against the Ormonde Cycle Company, E. J. Willis and George S. McDonald, for the alleged infringement of reissued letters patent, No. 11,153, granted to John B. Dunlop March 24, 1891, the motion for an injunction against the defendants was granted. The court's decision was as follows:

"The defences are invalidity of patent and non-infringement. The question of validity has already been decided in favor of the patent in Featherstone vs. the Bidwell Cycle Company. The defendants further deny infringement upon the following ground: The original inventor obtained patents for his invention in Great Britain and subsequently in the United States. He assigned to complainant all his interest in the Ameri-

THE PEERLESS TRIANGLE.

by means of a screw-driver or lever of any sort being drawn tight, and hooked to second plug, which, turning, locks it. The tire fastens on the plan of a rucker string. It lists at from \$80 to \$26 a set.

Morgan & Wright's New Tube and Valve.

Morgan & Wright show to the Chicago trade, this week, an excellent inner tube. Mr. Morgan has been engaged in experiments for some time and has discovered the secret. The tube stretches to four times its length, and regains its natural position at once. It is seamless and of a firm texture, very pleasant to the touch. The ends are neatly moulded and cannot be forced open. They have also greatly improved their valve. In principle it is the same as last year. All objectionable features have been eliminated. The little plug is in the center of the valve, so that the pump does not touch it. The pump has been improved and made of finer material, the base being larger than the top. The lps at the bottom have been supplanted by a brass cap with an air hole in the center, which, being screwed in, acts as a base for the spring, which in turn is strong enough to hold the rubber plug tightly against the shoulder and prevent the air escap-

derfully, as it generally takes time to introduce a new article, even if it has extraordinary merit. The Warwick company has ordered 5,000 Ideal tires.

More Bicycle Makers.

L. S. Baumgardner has for a time been organizing a company at Toledo for the manufacture of bicycles and iron wheels. Now Mr. Baker, of the firm of Baker & Flory, East Toledo, has interested himself in the enterprise and the company has been formed. The works will be located in East Toledo.

The Bradley Bicycle Company has purchased the mower works at Niver-ville, N. Y., taken possession of the same, and will begin turning out wheels shortly.

Sager Doing Good Business.

Among the trade visitors in New York was J. H. Sager of Rich & Sager, Rochester, the well-known saddle, luggage carrier and child's seat manufacturers. Mr. Sager did considerable business in New York, but says buyers will only give part of their orders now, preferring to wait for the Philadelphia show to see what is new on the market. An agent came into Schoverling, Daly & Gales while Mr. Sager talked to Mr. Daly, and

can patent. Afterwards the owner of the British patent licensed the defendants to apply to a bicycle in Great Britain the tires covered by said patent. This bicycle was then imported into the United States and sold by defendants. The defendants claim that such importation and sale does not constitute infringement. But the purchaser does not acquire any rights greater than those possessed by the owner of the patent. The owner of the British patent could not authorize either his vendee to sell the articles in the United States so as to conflict with the rights of the owners of the American patent."

Louis Shoening Going Abroad.

On the advice of his physician Louis Shoening of the Western Wheel Works left Chicago on Wednesday of this week for New York, whence he sails on Saturday for Europe. Sickness has been a frequent visitor at his house this year. He has lost one of his children, the other has been in poor health, and Mr. Shoening has himself been a severe sufferer at times. He was at the factory Monday for the first time in three weeks. His doctor believes that his lungs are somewhat affected, and advises a complete change. He will land at some Mediter-

"CAN'T MAKE A MISTAKE."

FINDLAY, OHIO, Aug. 27, 1892.

MARBLE CYCLE MFG. CO.:—While W. C. Munchausen, of Findlay, O., was training on his new Smalley Road Racer he collided with a freight train drawn by a balky locomotive. The Smalley had the upper rod of the frame and also the saddle post slightly bent and indented, and three spokes slightly loosened by a stroke from the piston rod, but for running purposes it was absolutely uninjured. Within twenty seconds after the accident its rider was pushing it at full speed to test the bearings and riding hands off to see how it lined up. It ran perfectly satisfactorily every way; but the freight train—well, there wasn't any freight train, for like the boy who "stood on the burning deck," "there was a burst of thunder sound: The train, O where was she? Ask of the winds that far around strewed freight cars o'er the sea." The engine wheel that struck the bicycle was buckled in seventeen different ways and looked like a stale ginger-bread man, and the whole train looked like an Ashtabula wreck. The other wheel was tied in a double bow-knot and the entire crew was killed. If I had needed proof that Smalleys are good enough I should be convinced, and I am sure that all Smalley riders will join me in saying they are better than the BEST. "*You Can't Make a Mistake in Buying a Smalley.*"

THOS. C. MUNCHAUSEN.

In justice to Mr. Munchausen it should be said that he is one of our 7,000,000 agents, and knows what he is talking about. We shall spring more testimonials from our other 6,999,999 agents as the season progresses. Meanwhile our inducer, Col. Geo. K. Barrett, is talking business to responsible agents, and allotting territory.

reanean port and there consult a physician before locating for the winter. The length of his stay will depend entirely on his progress, but will probably extend over at least a year. It is understood that no addition will be made to the staff at present, arrangements for next year being very complete and the output about disposed of. Mr. Coleman, of New York, will be a frequent visitor to Chicago, however. Mr. Shoening, than whom no man in the trade is more popular, will have the best wishes of many friends during his wanderings abroad.

Another Buffalo Wheel.

The Queen City Cycle Company has enlarged its plant very materially, and has fitted up its place with a new system of steam heating and power, also adding a new automatic engine.

It has spared no money in its outlay and everything is first class all around. A corps of competent workmen has been engaged, and a new wheel will be the outcome. It will be built regardless of expense, many ideas that have never appeared in any wheel will be introduced.

Chicago Trade Jottings.

Otto Merpall has resigned as manager of the Marble Cycle Company's retail branch.

George K. Barrett sold fifty Smalley safeties to a firm at St. Augustine, Fla., last week.

B. V. H. Schultze, the energetic cycle dealer and rider of Zanesville, O., was in Chicago last week.

Mr. Hughes, manager of the Quadrant Cycle Company, is back at the old stand from a long business trip to Philadelphia.

The Sterling Cycle Works and Ames & Frost have spoke machines for rolling the thread and facilities for supplying manufacturers.

Thomas Sanders, the much traveled Englishman, representative of William Bown, the Credenda Steel Tube and other concerns, was again in Chicago,

SALADEE'S PATENTED INTERNATIONAL STANDARDS

For the UNITED STATES, CANADA, ENGLAND, FRANCE, GERMANY, BELGIUM, AUSTRIA and SWITZERLAND.

The arrow points in FIG. 1 indicate the open spaces between the plates of the spring in front and rear of the clasp, and which are closed as the weight is applied to the seat, reinforcing the spring as it is depressed, and thereby affording an AUTOMATIC ADJUSTMENT, to a light or heavy rider. Never before attained in cycle saddlery.

Correspondence Solicited for next season's trade.

The Whitten-Godding Cycle Co.
PROVIDENCE, R. I.
Sole Manufacturers for the U. S.

The simplicity, style, and comfort embodied in FIG. 2, as a "Scorcher" Saddle, has never yet been equalled. In this spring, the weight of the rider is so balanced, in relation to the L-Rod, that the absolute rigidity of the old "Hard Shell" is avoided, and hence a degree of comfort is retained that all expert cycleers riding a "Scorcher" will duly appreciate.

Send for our Illustrated and Descriptive Circular, and PRICE LIST.

To Athletes, Cyclists, Baseball and Footballists. Horse-back Riders, Boxers and Oarsmen—When you want to ride, run, walk, row, skate swim a long distance, USE

ANTI-STIFF

TO STRENGTHEN THE MUSCLES.

It is a marvelous preparation for Strengthening the Muscular System. With Anti-Stiff there is no faith required; it goes straight for the muscles, and you can feel it at work. It has a peculiarly warming, comforting and stimulating effect on all weak or stiff muscles or sinews. Quick in its action, cleanly and pleasant in use. Rub it into themselves every night for a fortnight and you will be pleased at its supporting and strengthening properties. There is not, nor has been, anything like it till now. It differs from all Oils, Embrocations and Liniments, both in substance and effect. Some Athletes are so fond of it that they rub it all over them.

Price, 20c. and 35c. per box.

Trainer's Size, \$1.00.

ATTENTION, ROAD RIDERS!

PRIZES FOR THE SEASON OF 1892.

ENTRIES CLOSE CHRISTMAS DAY.

As we have given many **PRIZES** for track and road races during the past season, it seems only fair now that Christmas is approaching to offer something for the hard-pounded road riders. If this experiment succeeds we will make a desirable list for 1893, which will be announced later on.

FIRST PRIZE, \$25.00 To rider who has ridden the greatest distance on M. & W. Tires without change of tires or any important repairs.

SECOND PRIZE, \$15.00 To rider making greatest number of Centuries on one set M. & W. Tires.

THIRD PRIZE, \$15.00 To rider making most meritorious single ride, weather, condition of road and distance considered.

FOURTH PRIZE, 1 Set Road Tires To each second and third best in above.

JUDGES: N. H. Van Sicklen, C. P. Root, L. J. Berger.

CHEQUES FOR CASH PRIZES WILL BE MADE TO ORDER OF N. H. VAN SICKLEN TO BE EXPENDED IN ANY WAY THE WINNER MAY CHOOSE.

WE ARE TO HAVE THE PRIVILEGE OF PUBLISHING THE RECORDS UNLESS RIDER STIPULATES TO CONTRARY.

FILL OUT CAREFULLY AND MAIL TO US.

24 Cash Prizes.

We desire to thoroughly introduce our Sunol Bicycles throughout the United States in 1893, and in order to give them such an introduction, we realize that we must advertise liberally and well. We are willing to advertise liberally, but that it may be done well, we must have a supply of bright original advertisements. We therefore make the following offer for the best 24 advertising ideas, first prize to be awarded to the author of the best, second prize to the author of the second best, etc.; decision to be made by three competent judges:

1st Prize, \$200. 2nd Prize, \$100. 3rd Prize, \$50.
4th Prize, \$25. 5th to 24th Prize, \$10.

We will also pay \$5.00 for each idea not securing a prize that we think we can make use of. Contest closes January 15th, 1893. For particulars as to the nature of advertisements required, etc., address—

THE REFEREE

For one year. Once a subscriber—always a subscriber.

his seventh trip across the water this season.

The Morgan & Wright tire on the Ariel safety in the window at 277 Wabash avenue has covered 18,000 miles and is perfect yet.

The Gormully & Jeffery Manufacturing Company sends forth the Rambler racers for next season with bright and shining copper-plated rims.

The Ames & Frost Company is doing an immense business in rims, many thousands of dollars' worth having been sold during the past week.

Otto Merpall, formerly manager of the Marble Cycle Company's retail store, has entered the employ of the Charles H. Sieg Cycle Company.

H. G. Rouse and Fred Patee were together at the Wellington Hotel last Saturday, presumably bent on missionary work in the interest of the Rudge.

The Monarch Cycle Company is very busy just now on its '93 wheels. The company is determined to be in the front rank, and the '93 models are a credit.

Mr. Clementi, formerly of Sieg & Clementi, has secured the agency for a number of excellent wheels for next season and will soon open a store in Chicago.

Charles F. Stokes returned Saturday from California. He found business quiet there, but sold large bills of goods in Los Angeles, Portland and San Francisco.

E. D. Kenyon, of the Kenyon Cycle Company, Des Moines, Ia., was in the city last week, contracting with the Hanson & Van Winkle Company for a nickel-plating plant.

The Brown Brothers Manufacturing Company, which makes the Greyhound, will make very little change for the '93 wheel. This year's trade has been very satisfactory, the company reports.

At the Charles H. Sieg Cycle Company all hands are being pressed into service putting up tire repair outfits, as Mr. Sieg intends to give a complete outfit with every wheel sold next season.

Mr. Hadley, manager for the Diamond Machine Company, Providence, R. I., is in the city. He says his trade with the bicycle manufacturers has been very large. The company has a branch warehouse in Chicago.

W. C. Brewer, manager of the Toledo Bicycle Company of Toledo, recently of this city, was at the Wellington Hotel last week with a sample line of machines, including a very handsome racing wheel weighing twenty-three pounds.

Some Chicago cycle agent is going to reap a harvest from the Plzen Cycling Club ranks next spring. At the present time there are fifteen men joined together in a club to purchase that number of some make of wheels to be selected later.

The Woodruff & Hanchett Company has closed with the Eagle Bicycle Manufacturing Company, and will handle Eagles in northwest territory. This, with the Pullman, gives the firm an excellent line. Mr. Larned is now on the road.

George M. Hendee sold the Ames & Frost Company 6,000 wrenches while in this city, an indication of the number of Imperials this firm intends to manufacture next season. Hendee took many large orders for Majestic wrenches in Chicago. He represents Hurlbut Bros. & Co. of New York, jobbers of the Majestic.

Howard B. Smith, of the Buffalo Wheel Works, is in the city. Niagaras for '93 will have Humber frames and Humber style brackets and forgings, all around. The roadster weighs thirty-seven pounds and has 44-inch wheel base; the road racer twenty-eight pounds, and racer, twenty-four pounds, have 33-inch

wheel base. The company will manufacture 2,000 machines this season.

R. D. Garden has returned from his trip to Hot Springs. He is much improved in health. Mr. Reveille, who has been occupying Mr. Garden's chair during his absence, returned to Boston to accept a prominent clerical position with the Pope company.

The Fulton Machine Works will turn out a thousand Thistle safeties next season. This company was very successful this season both in the road and racing machines. The latter weighed but eighteen pounds, and as a test was considerably used on the road with pleasing results.

The Marble Cycle Company is about to enlarge the capacity of the retail store by the addition of a balcony over the rear portion of the salesroom. George K. Barrett, representative, inducer and manager in general, will be provided with a suitable office as befits his lofty position.

The F. F. Ide Manufacturing Company of Peoria has placed an order with the Hanson & Van Winkle Company for a complete nickel-plating plant. The Ide company will manufacture the Rudge and Sylph for Rouse, Hazard & Co. and the Rouse-Duryea Cycle Company, respectively.

A sample of the '93 Derby was seen this past week. In appearance it is little changed from that of last season. The frame is double throughout. Instead of encircling the head, as was done this season, it is attached by drop forgings. The weight is about thirty-four pounds. Both wheels are 28-inch.

George M. Hendee, representing Hurlbut, Brothers & Co., New York, left Chicago last week for an extensive western trip. He goes to Milwaukee, St. Paul, Omaha, Kansas City, Denver, San Francisco, Portland, and thence via St. Paul and Minneapolis to Chicago. Mr. Hendee expects to be gone six weeks.

Among the trade visitors to New York last week was George M. Vogel, brother of the secretary and treasurer of the Gendron Wheel Company, and a member of the company. Mr. Vogel was taken into tow by Quinlan, who, although not an Elk, can show many New York pastures new and foreign to a Toledo Elk, even in as good standing as George M. Vogel is with his Toledo lodge. H. E. Fisher, Jr., son of President George H. Fisher of the Gendron company, also arrived in New York to join the local staff in the capacity of bookkeeper, and being a bright young man will no doubt like the national metropolis.

Trade Tottings.

Charles C. Volting has succeeded Fred Vohringer & Co., 517 Fifth avenue, Louisville, dealers in cycles and sundries. The Standard Manufacturing Company, Indianapolis, has sold 2,500 '93 wheels to Greenebaum's Sons of Chicago, who will control the west.

The prominent Cincinnati dealers have agreed to close their stores at 6 o'clock each evening, except Saturday, up to Dec. 13, and from Jan. 1 to Feb. 15.

The Standard Manufacturing Company, Indianapolis, has sold the balance of its capital stock of \$50,000. The company is making extensive preparations for next season.

The new Raleigh factory in New York is in full working order and is at present a very busy place, as work has started on the 1893 machines, which the company will be ready to supply to agents in any quantity Jan. 1. The company will make four patterns for next season, a twenty-two-pound racer, twenty-four-pound road racer, thirty-two-pound roadster and a thirty-four-pound ladies' wheel.

In addition to these four styles, the company also builds to order special racers and tandems.

L. Crondel, of Howard A. Smith & Co., Newark, is on the road, and will appoint agents in the south and east for Excelsiors and sundries. Crondel reports plenty of orders and prospects for next season's business good for everybody in the cycle trade.

Excelsior cycles for '93, imported by Howard A. Smith & Co., will be built in four weights, from a twenty-five-pound racer to a forty-pound full roadster. The ladies' machine will weigh only thirty-five pounds, all on.

The Indiana Bicycle Company for '93 will place three high grade wheels on the market, the Arlington, Princeton and Waverly. In our next issue we expect to illustrate these wheels. Hereafter cheap wheels will not be made by this company.

The H. P. Davies Company, Toronto, has taken the Canadian agency for the New Howe, and that excellent wheel will no doubt be heard of in Canada next season. Harry Davies is well and favorably known and was one of the pioneer racing men in Canada.

A company has been organized in San Francisco to handle Imperial safeties, having placed an order for 300 machines. It is known as the Imperial Bicycle Company. A firm of the same name has been organized in Portland, Ore., and has placed an order for the same number of machines.

The Kalamazoo Cycle Company has commenced to manufacture a wheel which has not as yet been christened. The nickel-plating plant was furnished by the Hanson & Van Winkle Company, of Chicago. This company also furnished the plant for the Yost Manufacturing Company.

George Collister, for many years in charge of the bicycle department of Davis, Hunt & Co., of Cleveland, has accepted a position with the Winton Bicycle Company, of that city. He will represent the company on the road in Ohio and will be manager of the retail department in the city.

Fred J. Reville, who filled Mr. Garden's position as manager of the Pope company's branch during that gentleman's visit to the south, returned to Boston Monday, accompanied by Mr. Joyce. Mr. Reville's administration of affairs seems to prove that the company's supply of able material is by no means exhausted.

W. C. Davis of Waterloo, N. Y., has just finished building a bicycle in spring frame and forks. A cut of this wheel will appear in the Christmas issue. The first wheel weighed forty pounds, but the inventor says he can lighten it somewhat, to thirty-five pounds, probably. He has ridden it 300 miles and so far it has stood up well.

The Kalamazoo Cycle Company is sending out advance sheets of some of its specialties for 1893. Besides the folding parcel carrier, it will have a half-dozen other kinds of carriers, ranging in price from \$1 to \$3, some of which will carry a light weight package while others are made large enough to carry up to seventy-five pounds. It will also have something new in baby carriers and child's seats and has a new device for carrying mail bags. Besides the specialties in carriers, it will also job all kinds of cycle sundries.

H. J. Hall, Jr., traveling representative of the Raleigh company, has placed the following agencies: Bridgeport Cycle Company, Bridgeport, Conn.; E. O. Bennett & Co., New Haven, Conn.; H. J. Curtis, Hartford, Conn.; Haradon & Son, Springfield, Mass.; W. E. Sanborne & Co., Boston; W. E. Rankin & Co., Providence. The Raleigh company

intends to have one of the finest exhibits at the World's Fair, and Mr. Hall will wind up at Chicago to take charge about March 1, making Chicago his headquarters.

L. Bettman, representing the Triumph Cycle Company, Coventry, has established the following agents to handle the Triumph in this country: White Sewing Machine Company, 23 Union square, New York; J. B. Rich Cycle Company, 1702 North Broad street, Philadelphia; C. Hanauer & Bros., 258 Walnut street, Cincinnati; Prince Wells, 629 Fourth street, Louisville; Truesdail Machine & Arms Company, 604 Fourth street, St. Louis; Western Cycle Company, 254 Ogden avenue, Chicago; Schulenburg Cycle Company, 98 Randolph street, Detroit; White Sewing Machine Company, 163 Tremont street, Boston.

At the factory of the Eclipse Bicycle Company in Beaver Falls, Pa., everything is progressing finely. Enough large orders have been booked already to ensure a good season's trade, and a daily output will be reached exceeding anything heretofore accomplished by this company. The '93 Eclipse line will comprise a road wheel weighing about thirty-nine pounds, all on; scorchor, stripped to weigh about thirty-three pounds; track wheel, to be built a little later in the season, and a ladies' wheel. The entire line will be built of the best of steel, Humber frames with long steering head, 28-inch wheels, tool-made cones and races, special Eclipse crank and a saddle of special design.

A Popular Milwaukee Wheelman.

One of the most familiar faces of the Milwaukee Wheelmen is that of Thomas E. Hutchings, the popular and efficient treasurer, whose photograph is presented herewith. Mr. Hutchings' official position naturally brings him into close relation with every member of the club,

THOMAS E. HUTCHINGS.
Treasurer Milwaukee Wheelmen.

and despite the fact that, as the "watch dog" of the treasury, and always on the alert for delinquent subscriptions, few if any members of the club are more popular. As an active wheelman he stands with the leaders and is among the first road riders of the club, being a many times over centurian. He is not alone in his admiration for the wheel, for his family share it with him. Mr. Hutchings is also a skillful photographer. His camera is his almost constant companion a wheel, and the club room of the Milwaukee Wheelmen is the home of some of the finest of his productions in the photographic art.

The Illinois division election was a tame affair, very few other than the straight tickets being cast.

CHRISTMAS ADVERTISING COPY.

It is absolutely necessary that copy for advertisements in the Christmas issue of the REFEREE be forwarded to this office at once. Some of the forms have already gone to press. The edition will be a large one and advertisers will aid us by forwarding copy *at once*.

DEFYING THE RACING BOARD.

Anticipating a sweeping change in the rules defining an amateur—or rather those controlling (?) the racing men—and regardless of the penalty that *might* be inflicted, the pure white amateurs of today are defying the racing board on every conceivable occasion. And if Mr. Chairman Raymond—when he returns from abroad—and his associates do not have their hands full, providing they enforce the rules prepared by themselves, we shall miss our guess by a long way. Hardly a day passes that the rules of the board are not transgressed, and yet no official notice is taken of the wrongs committed. We know that in the south there is a team on record-breaking bent, traveling with trainer, manager and all, at the expense of a manufacturer. Our news columns tell this, and for that matter we do not know that the affair is meant to be a secret at all. Though it was clearly against the racing board's rules, a half-dozen Chicago racing men were taken to Milwaukee, boarded, lionized and even *loaned* money for the sake of advertising purposes. Some rode in the tournament there—some didn't. Those who rode had to do so to carry out their agreement; those who didn't were useless as far as advertising qualifications went. Others were imported in order that they might show their trick riding abilities. They did not compete in the races, but had to "be in it" somehow. There were no prizes for them, but they had no trouble in *borrowing* enough to see them through. Exhibition work is laborious; it is deserving of remuneration. A few dollars' worth of merchandise frequently comes in nicely. And *this was the reward*. If the giving of, say \$50 worth of merchandise for several exhibitions on the wheel is not receiving remuneration—it does not have to be money—what is it?

We again print clause *d* of the amateur rule to bear us out in the assertions we have made and shall make:

(d). Accepting directly or indirectly, any re-

MUNERATION, compensation, or EXPENSE whatever from a cycle manufacturer, agent or other person interested in the trade; or from any other person having a pecuniary interest in the sport, except that a cyclist may accept from the cycle or athletic club which he represents, his necessary expenses in training for and attending race meetings.

Every man that went to Milwaukee at the expense of the promoters of that meet, every one who accepted even merchandise, and every one who *borrowed* money from the leading lights of the tournament, is guilty of an infraction of the rules defining an amateur. They were warned before they went; they have been cautioned of the possibility of suspension, yet they seemingly fear not the racing board.

INTERNATIONAL CHAMPIONSHIPS.

British Sport takes exception to the idea of holding world's championship races each year "until the present speed of traveling is infinitely reduced and the expenses similarly reduced." It thinks "the world is too large yet awhile." Well, the world isn't apt to be made the least bit smaller, whatever happens. Our English contemporary thinks it would be no easy matter to get suitable men to go to Paris, or Berlin, or Chicago, or Shanghai, even if expenses were paid—"unless of course they were the makers' amateurs of wealthy firms." No one ever supposed that others than makers' amateurs, would travel from one country to another in order to compete in international races. No ordinary, self-supporting individual could do it. How many of the racing men of to-day who would have the least show in an international championship race are other than makers' amateurs? How many of the shining lights of the path during 1892 paid their own expenses? A precious few, indeed. Nine out of ten are pure makers' amateurs. They could travel to Paris, Chicago or Shanghai just as well as to any other point. If they want to be world's champions in fact they must compete with all comers and be prepared to defend the title, if lucky enough—or fast enough—to have it bestowed upon them. England, we believe, is by no means ready to keep out of the international championships. Her cycling promoters know too well that the Briton has about as good a show to carry off international honors as anybody.

WORK AHEAD.

Offices in the Century Road Club apparently go a-begging. For weeks and months a few enthusiastic members have endeavored to bring about the selection of a set of men whose duty it would be to govern the largest cycling organization, save the league, now existing in the United States. It was only after numerous attempted meetings that the club was even fairly launched, and then in a half-hearted manner. Now, when it comes to the election of officers, it is almost impossible to find capable men who care to serve. For the office of chief centurion, a life job, by the way, R. G. Betts of New York and William Herrick, the present incumbent, were selected as candidates. Now Mr. Betts declines to run, his excuse being that he is too much taken up with business duties. So Mr. Herrick, the nominating committee, must select some one to run against Mr. Herrick, the candidate. He selected Mr. Crowther of the *Bicycling World* and it must be admitted that Mr. Herrick did not pick out a "mark," as some men might have done if enjoying the dual capacity of nominating committee and candidate. This showed good faith on the genial William's part, and chances are he will receive more votes than ever. A large majority of the individuals comprising this club have taken

little interest in its affairs, and a few workers have had to run the affairs unaided for a long time. The C. R. C. has a bright future before it, but the members cannot hope to make it a success if they do not turn in and aid the officials more than they ever have before. It is no small job to undertake the management of such a body and the officers elected will need all the assistance that can be given them. It will be all work and no play if the C. R. C. proposes carrying out the many plans it has laid out.

Mrs. E. J. Allen has sued her pastor, the Rev. Mr. Cook of the Lovejoy Street M. E. Church, for \$5,000 damages for defamation of character. This suit is the outcome of Mrs. Allen's action for Mr. Cook's removal from his charge. She alleges that, angered by this, he attacked her character both privately and from the pulpit. Mrs. Allen's reasons for desiring her pastor's removal are that he has studied medicine and that he and his daughter ride bicycles.

The above paragraph recently appeared in one or more daily papers in Buffalo. There seems to be a grand field for missionary work. Think of it, a pastor's removal asked because he and his daughter ride bicycles! Was there ever stronger evidence of ignorance and bigotry? Were the reverend gentleman in question the only one who had ever committed such a heinous offence, there might be some reason for the lady's anxiety, but we have a great many wheeling clergymen, and nearly every rector, pastor and priest has been or is a student of medicine. Before this time next year there will be a lot more men in holy orders who will ride bicycles. The lady should take a peep at the pages of the daily papers and acquire more general information and, perhaps after some years, a little more of a liberal education.

A GREAT deal has been said and written of the probable change in the route of the Pullman road race, owing to the fact that the Pullman company and the management of the Hotel Florence are put out at the actions of the wheelmen on Decoration days. The Sheridan drive is suggested as the now most available course. If there were no complaint from the Pullman people it is doubtful if the race could be held next year over the old course. On Stony Island avenue an electric road is being laid and this would leave that street in such a condition as to prevent the holding of the race. By all means the race should be held over a *decent* road. If the race is not to finish at Pullman, it will not be a Pullman road race. The REFEREE suggests calling it the great western handicap or Chicago handicap, and then the name is suitable no matter what course is used.

THE following, from the Milwaukee *Sentinel*, is what we should term as rot:

W. B. Young, one of the Chicago Cycling Club's racing crew, came up last night. * * * Mr. Young gave his assurance, along with the requisite entry fees, that the Chicago club would send along the following "push": Julian Bliss and Cyrus W. Davis, the fastest short dashers in the west; Githens, who beat the only Sanger in their three-mile brush the first day of the Parkside meet; Emil Ulbricht a time medal winner in the Waukesha road race and hero of many a long distance trial; Fred Nesel, who tied with Johnson for the first time in the Waukesha; Roy Keator, the unicycle wonder, who will attempt to smash all the records for that breed of machine; Prof. Nicolet, the fancy rider of the C. C. C. and Cutting, a new and promising member of the racing crew.

An eastern cycling man has proposed that the following amendment be made by the L. A. W.: Suspensions from the racing board shall be from the track only, and an amateur so suspended can ride in a road race.

It seems as if some persons are anxious to break up true amateur sport in this country.—Milwaukee Evening Wisconsin.

We should like to know how the "true amateur sport" could be broken up any more than it is at the present time.

ENGLISH PRESS OPINIONS.

No Ordinary Championships.

We notice that the championships for next year are to consist of one, five, twenty-five and fifty miles bicycle, and one and ten miles tricycle events. This means, we presume, that we shall not again be called upon to assist at such farces as the so-called ordinary championship; and it means probably the final blow to the G. O. O. as a racing machine. We regret the disappearance of the graceful high bicycle, which gave us such grand sport in former days, as much as anyone, but we say now, as we said two and three and four years ago, that such disappearance was inevitable. When we first saw that the days of the ordinary were numbered, we said so publicly. We were led to our conclusions by the exercise of no extraordinary amount of common sense, and by the fact that we were not blinded by prejudice. Of course we were laughed at by that section which loves to dub itself "practical," and a tremendous effort was made to put us on the wrong side of the ditch by the starting of the "safety barred" movement. That desperate effort to keep out the tide with a pitchfork is fresh in the minds of most of our readers, so there is no need to tell here of the failure which attended it. We have the satisfaction of knowing that *Wheeling* saw how thing were tending long before anyone else did.—*Wheeling*.

* * *

Jimmy Knows a Bit.

We thought we knew some men who could give a few pounds to Ananias, but the Yankees can, we feel sure, give the best of them tons. Zimmerman, according to the American papers, had decided to turn professional, and had made a match for money. Now Zimmerman is reported to have said that he does not intend to desert the amateur ranks, nor had he ever such a notion, but he appears to have considered the question from the peculiar standpoint of an amateur. He is reported to have said that "a man loses caste with the public when he races for money," that "the cash prize system cannot be a success, for none of the really good men will have anything to do with it"; also, that "the first-class men will stick to the old game"—and quite right, too. £2,000 a year in prizes, and—yes, of course he'll stick to the old game, whilst, from what he says, the speediest—or, as he calls them, the first-class—amateurs, will also "stick to the same old game."—*British Sport*.

* * *

For World's Fair Visitors.

A party of Chicago cyclists have a building permit for a \$75,000 club house for the exclusive use of cyclists during the show, and, judging by the promises held out, it is said that it would be a "paying investment for a non-rider to become converted and go to the windy city as a cyclist simply as a matter of economy." "Conversion," we suppose, may be obtained by a diligent study of Zimmerman literature, Eck's "Discourses on Records and How to Make Them," and Johnson's "Advantages of Sprocket Wheels and Kite-Shaped Tracks." The final course—that on "Amateurism and Cash Prizes"—must be taken in the states, the treatment of this subject by British authorities being superficial and unreliable.—*Scottish Cyclist*.

The Chicago & Northwestern Railroad Company has adopted a new plan for carrying wheels. The owner of a wheel has only to get an order from the city ticket agent, good at all times, attach a tag to the machine, hand it to the baggage man and show the permit.

The following people called at the REFEREE eastern office, 21 Park Row, the past week: Jacob Bretz, Wilson, Meyer & Co.; A. O. Very, agent, Boston; H. Crowther, *Bicycling World*; H. Hadden, Bayliss, Thomas & Co., Coventry; Elliot Burris, Michelin tire; J. A. Sager, Rochester, N. Y.; J. I. Warman, Warman & Hazlewood, Chicago; Vincent Dagmar, Vincent Dagmar & Co., Boston; A. Hill, Coventry Machinists' Company, Boston; W. F. Murphy, Brooklyn; John A. Green, Philadelphia; Kirk Brown, Airtite Tire Company, Boston; Samuel Snell, Toledo; S. F. Heath and H. Winter, Minneapolis; R. T. McClasen, North Adams Wheelmen; John J. Fecit, Union Cycle Company, Boston; F. W. Ensworth, H. A. Lozier & Co., Cleveland; J. H. Powers, Powers brothers, trick bicyclists; Mrs. C. L. Bolton, president Pioneer Cycle Club, Brooklyn.

Two Colonels.

John Stuart Mill has this opening sentence in his book, "Principles of Political Economy": "In every department of human affairs practice long precedes science." This sound writer might have added "theory" with science. It is with pleasure one reads an article or listens to a speech from one that is practical and knows something of the matter in hand. Therefore, after you have read a lot of twaddle about the terrible fate that awaits amateurs and professionals (they are the same these days) if they ride races for cash, written by babes and sucklings in the sport, who devote their spare moments to filling up the crevices of obscure papers with copy that a Tarrytown goat would refuse to chew, you turn with relief to the utterances on the subject by practical men like Colonel Albert A. Pope and A. G. Spalding, who have favored the REFEREE with their views. A monthly paper tries to throw discredit on the authenticity of the recent interview with Colonel Pope, but the interview was just as reported, and when the good roads agitator talks he selects the proper medium, a paper that is up with the times, no monthly installment. Colonel Pope's mind is broad and generous, and generally on the right side of an important question, therefore the cash prize advocates welcome with open arms and a loud beating of tom-toms the advent of such a brilliant addition to the ranks of divisible prizes—yea, even gold that glitters. Of course, there is a difference in colonels when the question of cash prizes is up for discussion. The Hartford colonel (a little man) says cash is divisible, therefore iniquitous, and emphasizes his remarks "in thundering voice as he deals an inoffensive table a terrible whack." He was mad, and whom the godlets (that's us) would destroy they first make mad (that's the colonel). The other colonel, bless him, is a big man, an ideal colonel—broad, manly-looking, progressive and very successful; made lots of money out of the bicycle "biz." Look at the two colonels a moment, please. Examine their records from a public point of view. Then look at their wisdom molars, and whose judgment in the cash-prize-vs.-piano question will you take? From New York to the Golden Gate I hear the thunder-

ing answer, "Albert A. Pope, the father of American bicycling, the author of good roads, is right." When the Boston colonel makes up his mind to run for congress, the senate or the governorship, he will get there.

Spalding Favors Cash Prizes.

In another chapter reference is made to the advisability of listening to practical men on the question of gold medals and pianos vs. their equivalent (gold). It was with great pleasure that A. G. Spalding granted an interview to the REFEREE representative, in the presence of A. B. Barkman, last week. Mr. Spalding had just arrived in New York and looked as young as one remembers him ten years ago, and having the same kindness of manner, and voice "forty fathoms deep."

"You had a talk with my brother some time ago on the subject of the pro-

lower strata of society. That is not so, as anybody who has associated with the majority of professionals will acknowledge. Of course there are exceptions; so there are among the amateurs and among all classes and professions. The public demands the highest skill in any department of life, be it athletics, the law, the ministerial profession, our colleges and the stage, and is willing to pay for that higher skill. You cannot expect that in amateurs. The amateur rank is a feeder to the higher one, the professional, and it is all nonsense for the League of American Wheelmen racing board to expect that Zimmerman and others are traveling around the country in first-class style for nothing. I know the ropes too well for that. We have found little trouble with keeping our professional ball players in order the past ten years. We have rules, and enforce them to the letter. There must always be two classes. The amateur thrives when the professional is in a class by himself, and vice versa."

Mr. Spalding said further that in his mind bicycle racing was a grand sport; would give base ball a hard race if conducted properly, and that an association

distribute the dodgers. It will be a red-hot campaign of hayseed education, and the noted pair will find little time for the L. A. W. or anything else. That's why Luscomb and Potter have kissed and made up.

"Do I believe that the L. A. W. should meddle in politics?" said I. B. to a REFEREE man Friday, in his palatial *Good Roads* office.

"Why, yes; that is, practical politics; and if you are not practical these days you are simply out of it. Why not? That's the only way to get anything—demand it and see that you get it. I believe that the league should use its force in politics, agitate, and show the political aspirant that cyclists have a big power and will use it to the advantage of those who favor their interests."

Club Doings at Troy, N. Y.

TROY, N. Y., Dec. 3.—A bowling league has been formed in this city, comprising the Troy Bicycle Club, R. R. Y. M. C. A. and East Side Club. In the past seasons the Troy Bicycle Club has invariably carried off the honors, and of course will try to do so again this season. We have two of the best alleys north of New York city, and the members of the club are very enthusiastic bowlers.

Thursday evening, Dec. 1, a number of members went over to Cohoes and paid a fraternal visit to the Cohoes Wheelmen, who have recently moved into new quarters on Remsen street, in that city, and have their house very nicely furnished. The Cohoes men are enthusiastic riders, and under the leadership of their genial and popular captain, Thomas W. Neary, have rapidly come to the front during the past season.

Friday evening, Dec. 2, we held the second in our series of "stag" euchre parties. George Young won first prize and Frank Perkins second. Refreshments were served and a very pleasant night passed. These parties are in the hands of a very competent committee, composed of John R. Mulliken, Dr. C. H. Gabeler and C. E. Wilson.

Fortunately for the interests of wheeling, there is the very best of fraternal good feeling existing between the clubs in this section at the present time, and a cycle club league is being talked of, to comprise the Albany Wheelmen and Fort Orange Wheelmen of Albany, the Schenectady Bicycle Club, the Cohoes Wheelmen, the Mechanicsville Bicycle Club and the Troy Bicycle Club. Captains Schumacher of the Fort Orange Wheelmen, Neary of Cohoes Wheelmen and Homer of Troy Bicycle Club, have already had a meeting and discussed the matter, and in all probability the league will soon be formed. It is proposed to have joint runs and tournaments next season, which can be made very successful if all the clubs take hold.

TROJAN.

A Story of Cahill.

It is related of Andrew Cahill, the *Wheel* representative in Chicago, that just after his arrival in Chicago from Ireland, he was in a party examining some photos in one of the west side factories. A young lady, to whom Cahill was showing them, when asked for an opinion, said they were "out of sight." His companions were greatly amused to see him take her by the arm and gently lead her to a window, where they would be "in sight." He was not up in "Americanisms," which he rapidly acquired after that. He asked again the same question, when she replied: "Yes, they're out of sight." Then the "ever-obliging" lit a match and stepped to the gas jet to add light on the subject. The laughter of all present put him right, and it was a "set up."

L. B. WHYMPERS,
Manager Schoverling, Daly & Gales' cycle department, and editor
K. C. W. Announcer.

posed cash prize league, and from what he told me somebody had been taking liberty with my name as financial backer of a proposed cash prize league. He told you exactly what I should have told you, and that is—I am not interested in any way with such a scheme, and won't be. But our ball grounds would make ideal places for the laying of tracks, and we would like to talk to a company or association, for terms of an easy character could be made. My many interests compel me to refuse to enter into many apparent profitable schemes of the kind proposed. But I believe the same would be a success from the start.

"Do I believe in cash prizes? Why, certainly, my boy. I was a salaried professional for many years before embarking into my present business; played ball for money and associated with as fine gentlemen as any amateur that ever lived. Some people seem to labor under the impression that professionals belong to the

to control a professional league or control professional racing would meet with public favor.

Potter and Luscomb Kiss.

The two great political aspirants and forces in cycling politics have kissed and made up. Why make such an announcement? Because I. B. Potter said this week that Luscomb, himself and "the boys" were going to make Rome howl next year at all kinds of country gatherings, in behalf of good roads. They will take in everything from a cross-road hayseed political meeting to a full-fledged county fair. The idea is that a band of speakers—amateur and professional—take in the rural festivities and give the farmers "a good talking to" on their backwardness in good roads. Potter is to spring all the devilish-looking mud pictures in his collection on the hayseeds. Luscomb is to lead the orators and Potter the force that will dis-

THE INTERNATIONAL RACES.

The First to be Held in Chicago—Mr. Raymond's Bad Luck.

LONDON, Nov. 26.—The one affair of importance held in connection with the Stanley show was the conference on international championships. This was opened on Wednesday evening, and after a sitting of some hours was adjourned till the next morning. It was then decided that the first series of world's amateur championships should be held at Chicago in the fall of 1893. H. E. Raymond of the L. A. W. had quite hard work to arrive in time. On reaching Queenstown, on Tuesday night, he found a telegram from Henry Sturme, the organizer of the conference, telling him the conference opened on Wednesday evening and advising him to come right through at once, instead of waiting to go to Liverpool by the boat. So Mr. Raymond disembarked, leaving his baggage on the steamer. He then found that the train which was waiting only carried mails, and that the officials declined to take a passenger. After some discussion he managed to induce them to put on a special passenger car, for which he paid a large sum, and so came through, arriving in London on Wednesday night in time to attend the adjourned conference next morning and present the invitation of the L. A. W.

for the first international championships, to be decided in the United States. Mr. Raymond will probably leave here again in a fortnight's time, running over to Paris for a week in the interval.

* * *

SOUTHERN RECORD BREAKERS.

To Make an Attack on Windle's Holdings in a Few Days.

NASHVILLE, Tenn., Dec. 3.—Considerable interest is being taken over the fast racing men who are now quartered at the Cumberland Park track in this city. The quartette is now known as the Rudge racing team, and comprises such fast men as John S. Johnson, W. A. Rhodes, E. W. Ballard and Bert Myers. The local talent is represented by young Newsome, who is a coming southern rider of great promise; Gardner, who has full swing over the training and conditioning of the men. He is very sanguine that all the records up to five miles will drop a notch. It remains to be seen if his judgment is right or wrong.

The training quarters are of the very best, consisting of a nice little cottage, 20x50 feet. This is used as a dressing room. A coal stove is the centre-piece of the room, while around the walls berths on the plan of a Pullman sleeper

are arranged. The party has two triplets on hand, and Eck says the boys will beat two minutes, sure.

The weather has not been the best for over two weeks, and this has set the men back some in speed work. But training can be done every day, as there is also a third of a mile track which is covered all the way around and boarded up on the outside. It is used in stormy weather. If any records are broken it will be during next week. All the men are in the best of spirits and are rapidly getting into condition.

The house where the team rooms and bards is one which has a history. It is known as Hamilton Place, the property being settled on in 1780 by Mr. Hamilton's grandfather, and it has remained in the family up to date. It was on top of this house that General Steadman commanded the union forces in the late war, and General Rosecrans and the late President Garfield in 1864. The room occupied by A. L. Atkins is the one in which President Garfield passed many a sleepless night, while Eck has the one General Steadman slumbered in. The house is full of war relics and the boys have packed in their trunks bullets, pieces of swords, old shells, bayonets, etc. Just a short distance from the house all the old forts and embankments can be seen, while the front yard was once used as a breastwork. In the boys' room is an old-fashioned fireplace, and they stir up the ashes and coal with a rusty sword, which no doubt has done duty in war times.

SOUVENIR.

* * *

Will Return Sanger's Money.

The Chicago Tribune is about to return to Mr. Sercombe the \$500 check which was put in its care to bind the much-talked-of Sanger-Zimmerman match. The Tribune notes the fact that Zimmerman, through Troy, is "out for the

money," and cares to have nothing to do with any proposition that does not include side stakes of \$20,000. Sanger's backers, on the other hand, do not care to go beyond the \$500. The paper continues:

Sanger's father vows that if his son violates the amateur rule he will disinherit him. Zimmerman is not so squeamish or he would not have authorized Troy to speak so bravely. For a big sum he would probably peril everything and become a professional, but he has won so many \$1,000 prizes during the last year or two that the contemplation of another does not move him to the same degree of desire or excitability that it moves Sanger. He has replied to his challenge saying that if he is really desirous of measuring speed with him it must be for money stakes. But perhaps the champion does not mean this and only resorts to such strange language on the lips of an amateur merely to be rid of Sanger. Anyway he is not prepared to ride until June, and by temporizing with the matter until that time he will be, as a maker's amateur, ready to go on a step further and ride for cash or reconsider Sanger's present proposition and race him for what he can scrape together. Therefore the Tribune, perceiving that Troy is talking too high to accommodate Sercombe, will return the check of the Milwaukee firm for \$500 if there are no immediate signs of a match. Where Mr. Sercombe missed his opportunity was in not posting his deposit the moment the challenge was issued. Instead of so doing he waited a month, and during that time Zimmerman went irreparably stale. Now he can not ride.

Few of those who have watched this case have had the least idea that the two men would be brought together. That opinion has been expressed a dozen or more times. It has been known all along that Zimmerman would not ride again before next May or June—not for any amount that Sanger would put up. But this proposed match has been great meat for the newspapers, and has advertised Sanger to such an extent that he is now even called a champion.

* * *

New Track for Buffalo.

BUFFALO, Nov. 5.—Buffalo will have a bicycle track in the near future. Pro

gression and activity are strongly marked characteristics of the present age and the wheelmen of this town have reason to feel elated. The first scheme of the new wheel organization, the Associated Cycling Clubs of Buffalo, will be the formulation of a plan or way by which the long-desired track for the wheelmen may be made a possibility. Some years ago a committee was appointed to consider the plan of having a track for cycling events, but the time was not ripe for it, and the idea was dropped as being unfeasible. Our street transportation is more perfect; our merchants realize the benefits to be derived from a furthering of this sport, and the wheelmen themselves are aroused to the necessity, so that with a properly formulated plan any number of backers will be found willing to aid the committee. This association is fast being recognized, and its future is quite bright. More clubs are becoming interested at each meeting, and by the new year nearly every wheel club will have dropped into line and the real work of the society will have begun.

The entrance fee for each club will be \$5 and the yearly dues another \$5, three delegates being allowed from each. The local press is now doing all in its power to assist the scheme and to spread abroad its objects.

Will Not Award the Prize.

At the tournament of the Evansville C. C., Oct. 6 and 7, the management offered handsome diamonds for any records broken—or, at least, for the first one broken. In the five-mile Lumsden finished first in 12:36 3-5. Lumsden and Munger started from the same mark and at the third and fourth miles the latter was leading. These points were reached in 7:38 3-5 and 10:13 1-5, respectively, both inside world's record time. Then there was a dispute as to who was entitled to the prize for being the first to break a record, and the management did not know to whom to award the same. Now it seems that neither Lumsden nor Munger will be given a prize because they did not announce the fact that they intended to go for the record. It is seldom that competition records are made in any such way. They are usually accidents, as it were. Munger, it would seem to us, is clearly entitled to the prize for "the first record broken," and if there was to be a reward for "each record broken thereafter," Lumsden is entitled to one also.

Races at Emporia, Kas.

Several hundred people attended several bicycle races at Bean's driving park, Emporia, Kas., on Wednesday of last week. The summaries:

Half-mile, open—George Griffith, 1; Horace Whittlesey, 2; B. W. Jay, 3; time, 1:22 1-5.

Quarter-mile, open—Fred Houghton, 1; George Frost, 2; Ralph Jay, 3; time, 5:42 2-5.

Quarter mile, open—George Griffith, 1; Horace Whittlesey, 2; time, :43.

Six-Day Race for "Pros."

Frank Hall, the old-time manager of professional walking matches and bicycle races, was in Milwaukee last week to arrange a six-day professional race in the exposition building. He was also figuring to hold a similar affair in Chicago sometime during the winter.

Milwaukee's Diamond Tournament.

The Milwaukee Wheelmen are so well satisfied with the result of their indoor tournament during Thanksgiving week, that on Monday, Dec. 26, they will give a diamond tournament in the exposition building. A good programme is being arranged, and diamonds will constitute the first prizes. Johnson, Rhodes and Ballard, who are in the south, have been

telegraphed and will probably attend, as they intend to be home for Christmas. All the Chicago men are desired, and a special five-mile race will be on the programme for the especial benefit of Githens and Sanger.

A Race That Was a Race.

Shortly after assuming possession of the new and commodious quarters, the racing department of the Crescent C. C. of Detroit, asserted itself, and a race was proposed. After being postponed on account of the weather, the date was finally set for Thanksgiving, subject to sanction by the weather board. On that day just two riders, Osborn and Bloedon put in an appearance. They concluded that the prescribed course was too muddy, and decided to take a friendly ride around Belle Isle park and divide the prizes. A. B. Graham and "Jimmy" Brady sat in the club house waiting until the riders returned so they could "time" them. Osborn, riding as fast as a mile in four minutes, came into the club room first, winning (?) first time and first place. Bloedon came along shortly after, taking second time and second place. The lanterns and bells that formed the remainder of the prizes were, for some reason, unclaimed by these riders.

General Race Notes.

The Minneapolis Cycle Track Association, organized last week, has elected

GOOD ADVICE.

FARMER (to wheelman who accidentally fell into the stream)—"If you fellers wouldn't ride them blame things so fast ye wouldn't sweat so."—Judge.

the following officers: President, A. B. Choate; vice-president, C. A. Proctor; treasurer, E. F. Smith; secretary, A. E. Holbrook. Further directors are F. M. Washburn, Col. Swett, E. Keyser, L. W. Elliott and M. L. Knowlton. The plan is to raise \$10,000 by selling shares at \$10 a share, and with the money thus obtained to build a first-class club house and track.

Willis B. Troy refuses to talk about that Sanger Zimmerman match, thinking Sanger has received enough free advertising, and that that and that only was what was sought all along. Sanger is reported to have resigned from the Milwaukee Wheelmen, who cheered Githens when he defeated the "wonder" in the recent tournament and tendered him a banquet afterwards.

The Michigan Athletic Club, of Detroit, for which all of Detroit's fastest men will ride next season, has a fine track at the corner of East Congress street and Mount Elliott avenue, with a large and splendidly furnished club house adjoining. This club was lately made a stock company with 600 shares, which sell at \$30, par. Most of these have been disposed of.

Savannah, Ga., is to have a bicycle track, work upon which has been com-

menced. Trees and brush have been taken out and the building of the track proper is well under way. It is located at the intersection of the shell road and the electric railway.

Kansas City wheelmen have written Milwaukee to ascertain the dimensions of the racing track at the Exposition. It is their intention to hold an indoor tournament sometime during the winter.

A. B. Rich says that in even years he has made a poor showing; but in odd years he has proved a winner. A. B. figures it out that in 1893 he will show up in his old-time form.

A two-mile handicap will be held at the Press Club's athletic carnival, Dec. 17, at Madison Square Garden, New York.

Our World's Fair Headquarters and Club House.

The club building and hotel of the National Columbian United Wheelmen's Association is progressing rapidly and will be completed before March 15.

The large stone and brick building, four stories high, will be a credit to wheelmen and will accommodate a large number with sleeping rooms. The club house will contain large parlors, reception and reading rooms, library, cafe, barber shop, baths and ample bicycle storage rooms, together with bicycle repair shop.

The second, third and fourth floors will be entirely devoted to sleeping rooms;

mile event—meets his match at last;" "To meet again—Sanger says he will defeat Githens in to-night's races;" "Defeat for Sanger—Githens, of Chicago, wins the ten-mile free-for-all—Great event of the tourney," etc.

But the *Sentinel's* description of the ten-mile event was something of a gem. Here are a few extracts:

* * * They are sweeping down the short stretch like living cyclones and everybody's breath comes thick and slow. Just as the tape is reached at the commencement of the ninety-ninth lap the lithe Chicagoan's wheel jumps in the front, and on the steep turn Sanger is passed. * * * Will he catch him? everybody asks, excitedly. Yes, yes, he's almost up as they pass the tape and start on the final circle. Blood will tell in the finish, and grit is bred in Sanger's bone. They're abreast again at the south turn. In the straight on the east their wheels lap. The smashing finish is coming. Githens rides like a demon, Sanger is making a desperate effort. In a few seconds it's all over and Githens has won the greatest race of his life, with a wheel's length of light between his machine and that propelled by the fastest rider the country has turned out since Zimmerman's fame waxed abroad. * * *

Working for Good Roads.

ASBURY PARK, N. J. Dec. 5.—The Asbury Park Wheelmen will soon have a ladies' auxiliary connected with the club. There are nearly fifty wheelwomen in the place, and nearly all of them have signified their intention of joining the auxiliary.

No club in the state is doing more to promote the building of good roads than the A. P. W. It has even gone so far as to improve the highways in the center of the town by rolling down large quantities of clay, which has been placed upon the streets by the commissioners. Further than this it has expended \$100 in sending copies of *Good Roads* to the leading farmers of the county, hoping by such means to educate the tillers of the soil into the necessity of better highways. The movement has already resulted in much good.

Good Time by Coach.

To show what splendid condition the English roads must be in, a Birmingham daily paper says: "Mr. Claridge of the Craven Arms Hotel, Coventry, proposes running a coach from that place to London. The coach will leave the Craven Arms at 6 a. m. on Saturday next, Sept. 4, and the terminus will be the Castle and Falcon, Aldersgate street. It is estimated that the journey of 100 miles will be accomplished in ten hours, exclusive of stoppages. Five relays of horses will be required. Mr. Claridge, an old coaching authority, will have charge of the passage, but C. O. Pemberton, the well-known Birmingham amateur, will relieve him at various stages."

Is there a stretch of 100 miles in this big country where a coach with five relays of horses could cover the century in ten hours? The time is at hand, though, when that time will not only be equaled but beaten; when Col. Pope's dream will be realized.

H. R. H. Will Ride.

The Prince of Wales' intentions with regard to cycling are creeping out by degrees. It seems that there really is some truth in the rumor that has been going the rounds of the press. A tricycle is to be the mount, and the tires have been decided on, but nothing further is to be made public yet. Whoever the maker of the machine may be, he is to be congratulated. It is to be hoped his Royal Highness' advisers will know enough about the sport to counsel a light machine and a low gear.—*Irish Cyclist*.

Mr. Davis, Peoria's elderly wheelman, has just made another century. Cold weather does not seem to worry the man of three score years and five.

Very Charming, This.

There's no denying the fact that the Milwaukee daily papers are enthusiastic over cycling, and particularly over Milwaukee's pet, Sanger. These are samples of the display headings used by some of the papers during the Milwaukee tournament: "Githens the victor—Sanger clearly outgeneraled in the ten-

Our Line is Complete

IN HIGHEST GRADES.
IN MEDIUM GRADES.
IN LOW-PRICED WHEELS.

They Are Popular Goods. Our Prices and Terms Are Right.

WE control the entire U. S. for the sale of the Rudge and Overland; about three-quarters of the U. S. for the Sylph and Sager Saddles. We are manufacturers' largest jobbing agents for the Western Wheel Works' line in the west and carry an enormous stock.

Under the head of Job Lot and Second-Hand Cycles we offer extraordinary bargains.

RUDGE CYCLES!

Absolutely Highest Grade. Made in America, under our own supervision, from English material direct from the parent factory. **SYLPH CYCLES.** High-Grade Spring Frame. **OVERLAND CYCLES;** High Grade, but medium in price. **WESTERN WHEEL WORKS' Line,** for children, boys and girls, everybody. **Job Lot and Second-hand Cycles** in all styles, sizes and prices. **Saddles and Sundries.**

WE ARE

THE OLDEST AND LARGEST JOBBERS.

CARRY ABOVE 3,000

WHEEL IN STOCK DURING THE BUSY SEASON.

If you give us your orders we will do our best to please you. We please others, and believe we can please you.

We would be glad to hear from parties desiring our agency or who are in the market for wheels, Catalogue soon ready.

ROUSE, HAZARD & CO., 89 G St., PEORIA, ILL.

OLDEST AND LARGEST JOBBERS IN AMERICA.
— ALSO MANUFACTURERS AND IMPORTERS. —

THEY ARE NOVELTIES! SYLPH CYCLES

SELL Themselves When Ridden. Give Satisfaction to Their Riders. The Comfort, Ease and Perfect Riding Qualities make them the Most Desirable Cycles Extant. Their Three-part Spring Frame stops the jars and jolts and permits their riders to pass over rough roads and cobble-stone pavements with ease and comfort that riders of rigid frames would avoid entirely. They are EQUAL to others in Style and Finish. For STRENGTH and DURABILITY they are equal to or excel many, called "BEST."

Sylph Cycles Run Easy, Are good on the hills, good on the road, good everywhere, while for ease and comfort for general all-around riding, They Are Absolutely Without An Equal. Would you like to know more about this "Easy Rider?" If so, we will mail catalog on application. We are ready to make contracts for 1893, and solicit correspondence.

ROUSE-DURYEA CYCLE CO.,

89 G Street, PEORIA, ILL.

TRAVELS BY RAIL NOW.

The Awful Predicament of a Cyclist Out In Iowa.

"It has now become quite fashionable to make long tours on a bicycle, relates Archie Rooton to the Nortonville (Kas.) News. "I tried it a couple of years ago, but I didn't get so much fun out of the trip as I had hoped to. I started to ride from Dubuque to Sioux City. I carried a light housekeeping rig with me, consisting of blanket, frying pan and coffee pot, and camped out. I stopped on the afternoon of the second day in a beautiful grove through which flowed a small

stream. The roads were dusty and I concluded to take a bath and wash out my flannel suit. I did so, hung the suit upon the bushes to dry, and slept the sleep of the just.

"Next morning, when I tried to get into the rig, I found that it had shrunk so that to put it on was a physical impossibility. I had no more than made this discovery when a picnic party hove in sight. They were coming to make a day of it in the grove. I was so badly rattled that I did not know what to do, and, of course, did what I should not. Instead

blanket around my manly form, mounted the wheel and lit out down the road as tight as I could drive. A couple of mastiffs that were with the party gave chase, my blanket came off and I dared not stop to recover it.

"I saw a strip of timber ahead and thought that I would try to reach it and

hail some passing farmers, but met another wagon load of picnickers of both sexes, and, leaving my wheel by the

roadside, hid in a wheat field. It happened that the sheriff of the county was with the crowd, and he organized a posse, captured me, and was going to lock me up as a lunatic; but I finally made him understand the situation and he provided me with a pair of indispensables. I always travel by rail now."

In Their New Home.

DETROIT, Dec. 4.—The Crescent Cycling Club of this city has moved into a very fine club house, situated right at the Belle Isle bridge and on one of Detroit's most beautiful avenues.

The Detroit Wheelmen, at their last meeting, decided to form a stock company, and have placed 100 shares, par value \$25, on sale at \$10. They expect to secure large and well-equipped quarters centrally located, and offer many advantages as a down-town club.

Two nights a week the Detroit Wheelmen's rooms are filled with a silent crowd, and whist holds its sway supreme.

F. Ed. Spooner, in the interest of Morgan & Wright, visited us on Sunday last. He showed some very good improvements in M. & W. tires.

A wheelmen's dance for the 15th is on the boards and bids fair to be a well-deserved success. THE COLONEL.

Another Chicago Club.

Austin, one of Chicago's prettiest western suburbs, has been without a cycle club. Last week the members of the Oak Social Club who ride wheels decided to organize an auxiliary membership, to be known as the Oak Bicycle Club. Forty names were enrolled on the charter list. Officers were elected as follows: S. G. Crafts, president; Walter Thurber, secretary and treasurer; Walter Weston, captain; F. H. Leland, lieutenant. A German silver acorn on a black

cap and scarlet acorn on white shirt will be emblems. A number of good men will race under these colors next season. The Oaks have a magnificent club house in Austin.

Clever on Tricks.

Lee Richardson, son of L. M. Richardson, of the Monarch Cycle Company, is eleven years old. At the recent Milwaukee tournament he gave an exhibition of

trick riding, including the one-wheel act, standing up, arms folded, on the frame, and other difficult feats. His act followed that of Nicolet, and when he out-did his older rival it took the house by storm. "Nic" confined himself to the ordinary and the Eagle after that. In justice to him, it may be said he makes no pretense of safety trick riding, except on the one wheel, riding a half-mile this way.

Ran Down a Cyclist.

Last Sunday afternoon while George Vanderburg, who lives at 532 Madison street, near Center, he was run into by a horse and buggy driven by A. M. Harrington. Harrington was immediately arrested and locked up at the Lake street police station charged with assault and fast driving. Vanderburg's injuries were not of a serious nature.

The Rutherford (N. J.) Wheelmen have a plan on hand to build a new club house. Several prominent members are at the head of the scheme and it will be sure to prove successful.

Smokers at Buffalo.

BUFFALO, Dec. 5.—Thursday night the Press C. C. had a smoker, a hard times affair. It would have afforded an interesting study to those particularly interested in the make-up of such a class of society. The nomadic instincts and characteristics were well drawn and every field was well represented, from the convict held in bondage with ball and chain, through all the grades one meets in city and country rambles to the cowboy and greaser of the far west. A more disreputable lot of fellows is seldom seen at one gathering, and for the benefit of those not present a flash-light photograph was taken. W. J. Rice and W. H. Lapman were awarded special prizes for the excellence of their make-ups. Everyone present was invited to a repast of sauerkraut and weiners, with cider as a runner.

Saturday evening about a hundred of the Ramblers B. C. assembled at the club rooms to participate in a smoker. Each was provided with a red clay pipe and tobacco, and during the evening a very fine programme of well-selected events served to entertain them. Refreshments were served, and it was just 12 o'clock when the party adjourned.

WILLIE DUNN.

* * *

Amusements at Rochester, N. Y.

ROCHESTER, Dec 5.—The Genesee Bicycle Club was incorporated last week and a set of new officers has been elected, with Fred J. McCall as president, Allen C. McLean, secretary, and E. H. Craig treasurer. The club will hold a small reception and dancing party in its expensive club house next Wednesday evening.

Nearly fifty couples enjoyed the reception and ball of the Crescent Cycle Club in its headquarters last Wednesday evening. Dancing was indulged in until midnight, when an intermission for supper was taken.

A euchre party will be given by the Crescents Wednesday evening.

The Ramblers are about completing arrangements for their pool tournament.

PANHANDLE.

* * *

In and About Chicago.

The house committee of the Chicago C. C. is arranging a pool tournament. Playing will probably begin on Friday evening of this week and will continue nightly as the contestants can arrange games. Several handsome prizes will be given.

Since the Englewood C. C. moved into its new home it has had a great boom, particularly in a social way. Every Saturday night there is a smoker, Friday nights, informal dancing or cards, and once a month a reception is held. Mondays are devoted to gymnasium work and Wednesdays to indoor ball or gymnasium practice. The opening reception is set for next Tuesday evening, and on the 24th there will be a Christmas party.

* * *

About the Country.

Thursday evening last the Louisville C. C. gave a reception to "the October benedicts" of the club. The house was

decorated with the club colors, flowers, palms and ferns. An elegant supper was served the members and their guests, and at 9 o'clock dancing began. The newly-married people were: Mr. and Mrs. F. A. Crush, Mr. and Mrs. H. C. Montgomery, Mr. and Mrs. Edward J. Mathey Mr. and Mrs. Thomas E. Jefferies, and Mr. and Mrs. J. Curtis Scott.

Last Thursday the Lincoln Cycling Club gave the most successful reception in its history. This occurred at the Lincoln Park Refectory, forty-five couples being present, including Willis B. Troy and others of the many visiting cyclists. Mr. Troy said that the reception was very dressy, but withal so informal that all strangers were at home and at ease. Mr. Troy and others pronounced it the pleasantest ball ever attended. Other receptions will follow.

The Lenox Wheelmen of New York, will give their second annual reception and entertainment Saturday evening at Jaeger's, Madison avenue and Fifty-ninth street. A two-act comedy drama entitled "Hickory Farm," will be presented. Among those who will take part are, Sol Liebkind, David Davis, H. C. Jerkouski, Harry Arrows and Ed. Simmons. Edward Stien, the author, will direct the performance.

The "hayseed banquet" and the "mirth-provoking auction sale" are the latest indoor amusement schemes of the Grand Rapids B. C. For the auction sale each person brings some article carefully wrapped. The package is auctioned off and the purchaser is compelled to open it in the presence of the guests. Sometimes the article will prove of real merit; at any rate the club's treasury is benefited by the scheme.

Wednesday evening of last week forty-five couples attended the dance of the Fremont (Ohio) C. C. During an intermission P. J. Gotron, president of the club, introduced James M. Osborne, formerly proprietor of the *Messenger* and the first bicycle rider of Fremont, now of Daytona, Fla., who made a neat speech, which was warmly applauded.

The Press Cycling Club of Boston will have all the entertainment this winter that its members can desire. It will have an opening and musical smoker, its annual party, minstrel show, ladies' night, and other entertainments. The party will be held in Cotillion Hall Jan. 16, and the minstrel show in Tremont Temple Feb. 22.

Fenton S. Fox, Milwaukee, entertained the racing team of the Telegram Cycling Club at an informal dinner at the Plankinton House on Monday evening. The affair proved a success, and was highly enjoyed by all present. The team distinguished itself at the recent exposition tournament by taking twelve firsts, four seconds and five thirds.

Tuesday evening the New York Philharmonic club, assisted by Miss Weed, gave a concert at Springfield, Ill., under the auspices of the Capital City C. C.

The first annual reception and entertainment of the Montauk Wheelmen occurs to-night in Avon Hall, Brooklyn.

The Detroit Wheelmen will give an informal ball at Gaine's Dancing Academy, Dec. 15.

The Lakesides of Cleveland held a ball last Friday evening.

The Clifton club of Baltimore will give an entertainment Dec. 15. A min-

strel show is the chief attraction, though there are other amusing things on the programme.

Thursday night of this week was the date set for the annual reception of the Waltham B. C.

The Crescent C. C. of Detroit gives its first annual reception next Thursday evening.

The Quaker City Wheelmen are holding a fair at their club house this week.

Dec. 14 is the date set for the Brooklyn B. C.'s stag reception.

Overtraining and Death.

"Overtraining is worse than no training at all." How often is this wise assertion made by experienced and well trained cyclists, athletes and others? Endless, perhaps, is the number of times, still the suggestion and warning is unheeded by young men just branching out into the different departments of sports. Yes, even men advanced in years, and those from whom better sense might be expected, often overdo in their exercise.

The sad termination of the brilliant careers of Weber, Midgeley, Stout and Lafferty in the cycling field and Searle and O'Connor of aquatic distinction, and many other men celebrated for notable performances in the sphere of sport, would reasonably seem to serve as a lesson to those following the different branches of pastime.

Competition has such a fascination for some athletic young men that they do not yield to persuasions of friends to desist from further training, but, instead, continue until prostrated from overexertion.

Take the late champion oarsman, O'Connor, for an illustration. When he was in Rochester last July, the REFEREE's correspondent there had several interviews with him and saw him stripped, preparatory to going in the shell with his partner, Ed Hanlan. His physique was magnificent, each line of his figure being symmetrical in every degree. He was a subject representing perfect health itself, and when the news of his death came over the wire his many admirers in that city could hardly reconcile themselves to the true state of facts. After leaving Rochester he overdid himself in a race at Orilla, Ont., and in place of waiting for a rest and to regain his former good health he kept on training, which ultimately brought on typhoid fever. His weakened and impoverished condition could not battle against the dreaded disease and he succumbed after a few days' sickness.

Moderate training makes a man healthful and strong, but overtraining only makes a new grave in the family burying ground.

Arthur. A. Taylor Married.

Arthur A. Taylor, of the Taylor Cycle Company, arose early last Monday morning, arose with a noble purpose in his breast. Business was forgotten and all cares laid aside. At the Church of the Transfiguration, at 8 o'clock Monday morning, Mr. Taylor and Miss Grace S. Douglas, daughter of Frank Douglas, of the Kenwood Manufacturing Company, were united in marriage by Rev. Walter Delafield.

To Work for Good Roads.

The Associated Cycling Clubs of Buffalo will stand ready to assist the roads committee of the L. A. W. when the time comes, and it will have a strong leverage in that section, as it will endeavor to produce such an interest from its working and education that all wheelmen and wheelwomen, too, will be interested. The past year for Buffalo has been excellent for the

development of interesting wheeling but the signs all go to show that the year 1893 will out-do it by several thousands, and such being the fact, with the A. C. C. as leader and promoter, the daily press to spread broadcast its lessons, an eager and ready public as recipients, it must necessarily follow that everything that is beneficial must result from any great pressure brought to bear upon the authorities at the proper time.

The Cricket Club Sale.

A lively row is brewing over the sale of the grounds of the Chicago Cricket Club. Ostensibly the property was sold to a Mr. Dewar, a bank cashier, for \$54,000, a sum that will net the stockholders about seventy-five per cent. of their investment. This was done in spite of the fact that not over four months ago the grounds, bicycle track and club house were offered to the Chicago Athletic Club for \$92,000, which was, evidently, the value placed on the property at that time. Then it was claimed this was a moderate price, yet the valuable holding was disposed of for \$38,000 less. Certainly property on the south side has not depreciated over one-third in four months. It is not unlikely that an effort will be made to capture the nigger that is supposed to be in the woodpile.

Distance Annihilators and Time Savers.

The bicycle manufacturers are certainly enterprising men and have an eye or so open for business. They are now unitedly urging the people to or-

The Amateur's Friend.

ganize in favor of permanent road improvement. While much of this interest may be attributed to unselfish motives and a paramount desire to lift mankind out of the mud and dust, one can hardly help thinking that it means the sale of more bicycles as well. No matter, however, in what light we look at it, the move is a good one and one that cannot be put into shape too soon. Bicycles and tricycles are distance annihilators, time savers and health promoters, and the sooner the roads are put into bicycling condition the better it will be for every American citizen, whether he has a wheel or not. It is high time the people should begin to cry out against the present lack of system and economy in road making and earnestly demand a radical change that shall in a short time make good roads for all seasons of the year and for everybody.—*Lancaster (Wis.) Herald*.

Madison wants the Wisconsin division meet in 1893. It claims a fast track, fine grand stand and conveniences, and everybody knows it is a beautiful place, with every facility for entertaining guests. Madison's claims should be carefully considered. The state meet has been held at Green Bay, Oshkosh, Waukesha and Milwaukee, but never in Madison. Therefore the Madison C. C. wants it. The officers of the Madison Cycling Club are: B. W. Park, president; A. E. Small, secretary and treasurer, and D. D. Warner, captain.

LONDON, 33 HOLBORN VIADUCT, E. C.

Maltby is giving exhibitions in Seattle and thereabouts.

Fort Wayne is after the Indiana division meet for 1893.

The Crescent C. C. of Detroit has moved into its new home on Jefferson avenue.

The ladies of Asbury Park are about to organize a club in connection with that of the A. P. W.

A St. Louis fireman believes the day will come when there will be a bicycle brigade attached to the fire department.

The wheelmen of Mechanic Falls, Lisbon Falls, Sabatis and other Maine towns are organizing the Androscoggin County C. C.

E. F. Rogers and J. A. Elliott of Kansas City are locating a plant in Lawrence, Kas., for the manufacture of lawn and parlor bicycles. This new machine is a regular bicycle fastened to the floor by a rod and revolving at any size circle suited to a room. It is propelled by means of levers which the child takes, one in each hand.

Nowadays the poor wheelman isn't proof against the raids of the highwayman. An exchange from California says that J. M. Amick of Stockton, who spent Sunday visiting in Lodi and Woodbridge, narrowly escaped death while returning home in the evening. He was riding on a bicycle along the Cherokee lane when some one commanded him to stop. Not complying with the order the

robber fired a shot at him, the bullet passing through his hat.

The last issue of the *American Implementation Herald* devotes a page to the bicycle industry.

The Pensacola C. C., of Pensacola, Fla., is hard at work upon a scheme to improve the roads in its county.

The Chicago idea of mounting police upon bicycles is indefinitely better than that of using horses as a motive power. A policeman on a safety bicycle can go where a horse could not take him and go faster. Horses eat; bicycles don't. Convenience, speed and economy all support the bicycle as against the horse. Really it is a grand plan.—*Columbus Dispatch*.

Work has already been commenced on the annex to the club house of the Long Island Wheelmen. The affair is to cost about \$5,000 and will consist of a two-story structure at the rear of the present house. The upper part will be used as a cafe and kitchen, leaving that part of the present building which is now used for these purposes, for smoking, card and private dining rooms. The main parlors will also gain somewhat in length and accommodation. The lower part of the extension will permit of increased facilities for bowling, and there will also be a model repair shop.

A dispatch to the *Chicago Tribune* from Paxton, Ill., says: Prince Momo, a student of Central Tennessee College of Tennessee, who visited Paxton several years ago and lectured here, was forced to leave Africa five years ago, having attended a mission school and embraced Christianity. Being called home recently by the death of his father, King Balah of the Vey nation, adjoining Liberia, he wrote to friends here that he would rather have one bicycle to take home with him for its civilizing effect and as a great educator, than 100 horses. Francis

Meharry of this city, purchased a bicycle and shipped it to him at New York, whence he sails for Africa in December.

The Vehicle Casualty Company, to insure all vehicles and bicycles worth \$100 against accident, has been incorporated in Minnesota. Dr F. A. Dunsmoor is president; D. H. Headly, vice-president; W. M. Wright, treasurer; H. M. Farnam, counsel, and G. S. Couch secretary and general manager.

The annual election of officers of the Milwaukee wheelmen will take place next month, and already the political wire-puller is getting into his hustling toga. Candidates are becoming numerous and pleasant, but unless those who seem to hold a life lease on the offices relax their grip there will be little use of them fostering hopes in that direction.

J. D. Gluck, that enthusiastic Jersey rider, says his club, the Union League Club, of Westfield, has increased in membership from thirty to 150 inside of a month. There's some powerful work being done somewhere and Gluck is doing his share, although he is very busy with R. F. Downing, the forwarding agents.

English women—at least many of them—are now riding astride their horses while on hunting trips. It is more than probable that in a few years, perhaps even months, women will do away with the cumbersome dress while a wheel. It may shock some of our good friends, but it will come to pass, nevertheless—and why not?

St. Paul cyclists are terribly stirred up over the passage of an ordinance prohibiting sidewalk riding within a prescribed district. The maximum speed upon any sidewalk of unpaved streets outside of the district is fixed at six miles per hour; a warning bell or whistle is required and a lighted lamp after sunset.

No person riding a bicycle shall approach within fifty feet of a pedestrian without giving warning by a bell or whistle. The fine for violation is not less than \$15 nor more than \$50.

The Michigan Wheel Company of Lansing, Mich., is just now devoting all attention to the building of hickory pneumatic-tired sulky wheels, but later on may take up the manufacture of cycles.

Lincoln Holland, of South Farmington, Mass., has just brought out an eye protector (in the form of glasses) made of mica. It is designed to keep out the snow, dust or sleet while riding or driving.

W. H. Wilhelm & Co., Reading, Pa., will have a full line of Reading cycles at the Philadelphia show. The Reading firm has commenced a night run to keep up with the orders it has received.

W. F. Murphy, the well-known racing man, has at last decided to settle down to business, and to that end has taken the J. W. Bates Bedford avenue place in Brooklyn, and will open it with Humbers as his leader Dec. 15. Charlie, his brother, who is managing the bicycle department of a big dry goods concern in Brooklyn for the holiday trade, will join his brother in January. The Murphy boys are popular and should do well.

George Hilsendegen, the Detroit cycle dealer, did a splendid business last season. His store at 310 Woodward avenue will be entirely remodeled for next season. The second floor has been secured for second-hand job lot stock, and a fine, large room will be built in the rear for the repair shop. Last season from 600 to 800 high grade wheels were sold. For this season the Royal, Monarch and Centaur high grade and Featherstone medium grade lines have been secured.

CHRISTMAS ADVERTISING COPY.

It is absolutely necessary that copy for advertisements in the Christmas issue of the REFEREE be forwarded to this office at once. Some of the forms have already gone to press. The edition will be a large one and advertisers will aid us by forwarding copy at once.

TIRE FACTORY BURNED.

Morgan & Wright's Plant Suffers a \$15,000 Loss.

The immense rubber and tire factory of Morgan & Wright, located at 333 to 339 West Lake street, was damaged by fire shortly before 5 o'clock Wednesday morning, to the extent of from \$15,000 to \$20,000. Luckily, however, the factory proper was not damaged to any great extent, the flames being confined chiefly to the offices and shipping rooms.

The odor created by burning rubber was noticed at 4:30 o'clock by Watchman Miller, and in a few moments fire engines began arriving at the factory, a "2-11" alarm having been turned in. The offices and shipping room were almost beyond control and the firemen turned their attention toward saving the factory.

Two hours after the discovery of the flames they were well under control, through a strong odor of burning rubber remained, emanating from the compounding room, where it was thought the fire originated and the furnace is located. The raw material is kept in this room.

Mr. Morgan said he thought the fire started in the woodwork near the furnace, as the material stored in the room was not inflammable. The damage, he estimated, would reach \$15,000, but this is chiefly on the building, a wooden structure. The firm is fully insured, and as little damage was done to the factory, work will be running as usual before the end of the week.

SURVEY OF THE STANLEY SHOW.

Tires Formed an Important Feature—Gears, Sundries, etc.

LONDON, Nov. 26.—The Stanley show closes to-day. Taken all round it has been a distinct success. The exhibition itself is a good one, and on the whole the business done has been more than satisfactory. Several men, in fact, did so well that they left early in the week, and having as many orders as they could hope to execute, did not trouble to wait till the show closed. The feature of the show has been the great number of pneumatic tires exhibited—more than thirty different kinds were on view. The one which has attracted most attention from the public has been the new Dunlop detachable. The crowd opposite the stand (where four of the company's assistants were always in attendance showing the mode of putting on and taking off the tire) was so great on the first two days that it was found necessary to take another stand on the opposite side of the building.

The Seddon tire—the red tire, as it is now called—also attracted much atten-

tion, and very good business was done by the North British Rubber Company with its new Clincher tire. Of the new tires the Duplex tire, patented by Turner & Fernhead, was received most favorably. Mr. Turner told me that the American rights had been secured by the Pope Manufacturing Company. Dunn's Eclipse tire, built with a view to reducing as much as possible the suction created by the rubber, also seems a good thing, and this, too, has been taken up by an American firm.

Geared ordinaries were shown by nearly every firm of cycle makers. They were all a distinct advance on anything in this line exhibited last year. Two

Engineering Company; a new lamp, by Salsbury, in which the hollow tube of the handlebar becomes an oil reservoir; a safety stand, by the Cycle Supply Company, of Bournemouth, and a crank drawer, sold by Brown Brothers, are the most notable. The last mentioned is distinctly good.

The various side-shows and entertainments arranged as attractions for the general public fell rather flat; in fact, the exhibition itself proved attraction enough.

THE SEASON HAS OPENED.

Chicago Dealers and Makers Have a Look of Activity, at Least.

The season of 1893 is fairly opened. Everybody in the trade is hard at it. Everybody has a new bicycle, and the family resemblance among them is so strong that it is hard to tell one from another. The general specifications

KINGMAN & CO.'S LEADERS FOR 1893.

firms—the New Howe company and the Dorman Engineering Company—make their machines with a duplex backbone joined together at the crown of the back forks, the idea being to stiffen the frame and prevent some of the give which undoubtedly exists in the single backbone.

Of gears there are quite a number. The Crypto is fitted by a number of firms, but there are also many other types. Many of these are very similar to one another, all resembling as much as possible a back lathe gear. Of the rest the Centric gear seems a distinctly good thing. Being placed in the middle of the wheel it is bound to be much better than those which are fixed to one side, and better than this it can easily be adjusted to take up any wear and so prevent all back lash.

Tricycles are, as a class, very poor, but ladies' safeties have been much improved in detail. Of the accessories, a neat pump clip, made by the Dorman

cover a Humber frame, a 10 inch head, a scorcher saddle and a pair of cork handles. Of course there are other parts, but the ones mentioned, together with some red, blue or yellow enamel, are the principal selling points. There is a healthy demand for a good, sound roadster, and the makers are only showing what they can do, for I find that nearly all are bewailing the necessity (which the scorcher brigade has forced upon them) for the production of very light bicycles.

The geared ordinary, too, is beginning to create a furore, and although it probably will not cut a strong figure in '93, a year later it will be a standard article, and makers are beginning to get ready for it. In England it has already a strong foothold, and formed one of the principal exhibits at the Stanley show. Through our own eastern cities it is rapidly gaining prominence. Like the

pneumatic tire, it has been striven against and sneered at, but it has come to stay, and manufacturers will do well to recognize it before it is too late.

* *

I happened the other evening to fall in with a very representative cluster of of bicyclists—not racing men this time, but makers, dealers and inducers—and passed one of the most pleasant evenings I have had in many moons. Taking a walk down Cycle Row with J. O. Blake, we met Charles F. Stokes and W. B. Troy, and were soon after joined by Fred T. Merrill, of Portland, Ore., Charles Weiman, the new secretary of the Stover Company; W. Buggy, of Philadelphia; Bob Lennie of Thomas Kanne & Co., and Cabill of the Wheel. The boys were out for a lark, and although my gray hairs forbid—as I received a cordial invitation—I fell in with them, and learned a good deal about many things besides bicycling during the evening. By the way, the Stover people, Stokes and Gormully have each and every one thrown traditions to the wind and produced each for himself or themselves, a most excellent semi-roadster for 1893. I have had the pleasure (for pleasure it is to a westerner to see the west produce such splendid work) of trying each of the new machines—which are named, I believe, the Thoroughbred Phoenix, the Sterling Scorchers, and the Rambler No. 4—and I have never seen finer workmanship or finish. The west is rapidly getting to the front as a bicycle center, and it has already seven large factories to the five in the east. Of course this is mentioning only those that are really big concerns. There are, however, more small ones in the west than in the east, and in the matter of cheap machines, there is one factory in Chicago that turns out more than all in the east combined.

* *

Cycle Row is in a condition resembling that of the teapot just before it boils—sizzling, so to speak. Everybody is in a stew. Fred Patee is bustling about with a mysterious air, Conkling looks wise and sits in his new window with a satisfied expression, Temple tells fairly good stories, Herrick has a new saddle, J. O. Blake can't think of anything but corrugated tires, Plumb is watching "Mary and John" as of yore, only the Ariel people are paying his salary, Garden has a Relay with an elliptical sprocket; and all the rest are well, thank you.

LA COTE MAL TAIL.

HOPE FOR THE TRADE.

The Northern Wheeler on the Effects of the Recent Election.

Hope springs eternal in the human breast, but the human breast will not go on forever—like the springs of Tennyson's brook—merely on a diet of hope. Hope is a good thing to have about the house; to adapt the advice of a poetical advertisement, it is welcome always and should be kept handy; but a diet of plain hope is likely to send a man hopping mad, as the saying is. There is plenty of faith in the cycle trade and there always will be, while every maker believes that he makes the best, lightest, fastest and most durable machines, and while every rider fancies there is not such another cycle as the one he rides (especially does he fancy this if he is desirous of selling it). Of charity the wheel trade has no need, we are thankful to say; and now at last it can indulge in the luxury of a little hope. Hope is as necessary for the mental well-being as soap is for the complexion. And this hope, like all the good things of modern times, comes from

ATTENTION, ROAD RIDERS!

PRIZES FOR THE SEASON OF 1892.

ENTRIES CLOSE CHRISTMAS DAY.

As we have given many **PRIZES** for track and road races during the past season, it seems only fair now that Christmas is approaching to offer something for the hard-pounded road riders. If this experiment succeeds we will make a desirable list for 1893, which will be announced later on.

FIRST PRIZE, \$25.00 To rider who has ridden the greatest distance on M. & W. Tires without change of tires or any important repairs.

SECOND PRIZE, \$15.00 To rider making greatest number of Centuries on one set M. & W. Tires.

THIRD PRIZE, \$15.00 To rider making most meritorious single ride, weather, condition of road and distance considered.

FOURTH PRIZE, 1 Set Road Tires To each second and third best in above.

JUDGES: N. H. Van Sicklen, C. P. Root, L. J. Berger.

CHEQUES FOR CASH PRIZES WILL BE MADE TO ORDER OF N. H. VAN SICKLEN TO BE EXPENDED IN ANY WAY THE WINNER MAY CHOOSE.

WE ARE TO HAVE THE PRIVILEGE OF PUBLISHING THE RECORDS UNLESS RIDER STIPULATES TO CONTRARY.

MORGAN & WRIGHT, CHICAGO.

IMPERIAL HISTORY

FIFTH CHAPTER.

WHAT A MULTITUDE OF—

IMPERIAL riders there are, and why not? "IMPERIAL" Wheels are built to suit all cycling humanity. They are made for use on the American roads of to-day, as well as the smoothest race tracks. "Variety is the spice of life." "IMPERIAL" Wheels are made in five different styles, and everybody can be perfectly suited.

Learned judges, famous statesmen, wise doctors of medicine and good doctors of Divinity, professors of mental and those of physical culture, nerry speculators and timid capitalists, busy business men and women, likewise those that are not busy, big and little, smart and pretty, etc., etc.; members of the weaker sex, all are riding "IMPERIAL" Wheels.

For health and pleasure, for racing honors and prizes, for convenience and business purposes, select the IMPERIAL Wheel most suited to your requirements. The modern bicycle is a modern necessity. The world could get along without IMPERIAL Wheels, if it were really obliged to, but as long as the demand for them is embodied in such a healthy and vigorous growth as at present, we propose to keep on adding to our present facilities until we are finally enabled to make enough before we quit.

If you do not sell IMPERIAL Wheels, correspond with us quickly; we shall not be looking for agents much longer. During the coming season we expect to more than double our former output and we will need but little assistance aside from that of our old agents. Don't delay—time is precious to us all.

CHAS. H. SIEG MFG. CO.

Startling and Most Excellent are IMPERIAL WHEELS For 1893—Wait.

America. This is as it should be, considering that much of the depression that has lately been the lot of English trade has, among the other good things, been of American manufacture, and is principally due to the McKinley tariff act. It is difficult to discern in what way this act has benefitted the American wheel trade; indeed it would seem as though the reverse were the case if one may judge by the failures that have been chronicled in the American press, while there is no disguising the fact that it has more than played the proverbial old gooseberry with our own makers. The success of Mr. Cleveland is therefore of great moment to our manufacturers. Mr. Harrison was avowedly running on the McKinley ticket, and the immense majority against him is evidence that at length the great body of the American citizens have awakened to the fact that big profits for the few do not secure comforts for the many, nor does an increase of wages necessarily follow a rise in the price of goods. The passing of the McKinley act was one of the worst blunders of modern times, and it is satisfactory to learn that the customary cuteness of brother Jonathan has not been lulled into permanent repose by the tricky dealings of a party of wirepullers. Mr. Cleveland's victory is a distinct evidence of the return of American popular sanity, and the prospect of Transatlantic markets being ere long again opened to the English trade should convey a considerable amount of hope to all interested parties. But the mills of national or popular politics grind slowly, and much yet remains to be done ere either the producers or the consumers can reap anything approaching substantial benefit. At present, Mr. Cleveland and the English trade have but secured a moral victory over the McKinleyites; that moral victory has yet to become a physi-

cal and actual one ere good can result. And this cannot be done in a hurry. The installation of the new president is not until next March, and even after that it is possible that the American senate may not be over-anxiously desirous of satisfying what is undoubtedly the wish of a vast majority of American citizens—the abolishment of the obnoxious and mischievous tariff act, and a return to the style known in military circles as "As-you-were." Thus it seems that while the business relationship between England and America is likely to improve considerably during the next four years, yet the improvement is hardly likely to be immediately felt; perhaps even a year may elapse before there is a very marked emendation. But the improvement is bound to come at sometime or other. England is powerless in the matter either way, so all that can be done is to wait and hope that the improvement may be real, full and as soon as possible.

RECENT ENGLISH INVENTIONS.

New and Useful Designs in Frames, Tires and Wheels.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Oct. 5, give notice in the prescribed form of such opposition.]

No. 18,012. M. McMeekin's "Improved anti-vibration arrangement for bicycles and other velocipedes." Oct. 21, 1891.—This invention consists of a metal casing (e) enclosing a spiral spring (d) upon the two ends of which bear washers or hollow plugs (c and f, respectively,) serving to contract the spring (d). The casing is tapped at each end to receive the screw caps or nuts (b and g). The washer (c) is fixed upon a spindle (a) which passes through the screw cap

(d) and terminates outwardly with a circular flattened end having a central perforation (o) through which passes the axle of the wheel secured thereto by a nut. The washer (f) is held

in position by the screw cap (g) provided with a central tapped perforation, through which passes the screw bolt (j) furnished with a locking nut (i) and bearing upon the washer (f). This screw bolt serves to regulate the expansion or contraction of the spring (d). The casing is provided with centrally perforated lugs (k), whereby the device can be fixed to each branch of the front and rear forks of a velocipede.

No. 20,190. F. L. Lange's "Improvements in and relating to tires for the wheels of velocipedes." Nov. 20, 1891.—This invention relates to hollow tires or to covers to be attached to the same, and consists in making the tread with two longitudinal ribs and a series of transverse grooves between the said ribs, the object being to prevent both side-slipping and driving slip. The cover (A) is made of rubber or any analogous material, and it has on its outer face two ribs (a a') running circumferentially around its entire periphery. Between these two ribs the cover is preferably thickened, as shown, and in it are formed a series of transverse grooves (a' a'), each about one-quarter-inch wide and any suitable distance apart. As a modification, the cover may be made of leather or other analogous material, and on this the ribs are preferably formed by folding and stitching. Between these two ribs a band is fixed having a series of transverse slots or grooves, according to the thickness of the band. This band is attached to the cover by any suitable means. The cover may be fixed to the rim if it is intended to be permanent, but if it is intended to be used as a supplemental cover, it is provided with eyelet holes or other suitable devices for attaching and detaching.

No. 20,090. J. Robson's "Improvements in velocipedes, bicycles and tricycles." Nov. 19, 1891.—In one arrangement, in a safety bicycle, the diagonal tube of a diamond frame is used for the barrel of the pump, the barrel is closed at the bottom and has suction and delivery valves and a nozzle. To this nozzle one end of a flexible tube is attached and the other end is attached to the valve of the tire when inflating the same. This flexible tube when detached may be stored in the pump barrel or in one of the other tubes of the frame. In the barrel work a piston and rod for forcing the air and the L pin may be used as a pump handle by securing it on to the piston rod, or a separate handle may be used. A tube of the machine may also be used as a receptacle for a separate hand pump when such is used. The tubes of the frame are sometimes used for storing oil for lubricating the machine or for burning in its lamp. The claims are very inclusive.

The 1893 Stover Line.

Great strides have been made in cycle construction during the past year, and no maker has accomplished more in this line than the Stover Bicycle Manufacturing Company. This company has always been noted for its modesty and has always produced the best possible article. It is therefore with pleasure that we call attention to the three new machines it will put upon the market in 1893. Sterling merit and excellent workmanship stand out all over them. The Thoroughbred Phoenix (A) is a straight-lined diamond frame machine, with a 10-inch drop forged head, and is as handsome as a bicycle could well be. It is fitted with Gormully & Jeffery or Palmer tires and weighs less than twenty-nine pounds. The Phoenix roadster (B) is its counterpart, only fitted with mud guards, etc., and weighs less than thirty-eight pounds, while the ladies' Phoenix is a new departure, weighing, all on, less than thirty-five pounds, and having a new frame design. All of these machines are entirely new in design, and with the regular styles put out by the Stover company will make a range of selection hard to duplicate. E. H. Wilcox and the genial Bob Lennie will form the traveling force for the coming season, and we are promised a catalogue finer

NO MORE WALKING.

Our '93 Protection Strip Tire

When punctured closes itself in most cases ; if not, an ordinary puncture can be repaired on the road in a few minutes, without taking the tire from the rim or removing the protection strip, by means of inserting

OUR UMBRELLA PATCH.

A large cut can be made absolutely air tight by removing the protection strip and crowding some soft material in the cut moistened with rubber solution. Wrap it with special tire tape around the cut and replace the strip.

Our Improved Valve Is Perfect.

To Riders: Our '93 P. S. tire is as light and lively as any other in the market, and can be repaired by the roadside by any one in a few minutes. Any other tire must be removed from the wheel to be permanently repaired.

This cut represents the well-known inner tube tire laced on the under side, which we have greatly improved.

NEW YORK BELTING & PACKING CO., Ltd.

15 PARK ROW, NEW YORK.

TRIUMPH CYCLE CO., Ltd., COVENTRY, ENG.

than those already issued. The success of this company has been phenomenal, and it has deserved it in every way.

Swarthout's Changeable Gear.

The changeable gear device invented by Albert S. Swarthout, of Poughkeepsie, N. Y., on which he has been granted a patent, seems to be very simple and yet practical. A double clutch (H) or power-changing mechanism is arranged to slide on the crank axle so as to grip with the clutch-face of the sprocket wheels. On one side of the crank axle is a large sprocket (F) for high gearing, and on the other is a smaller one (E) for low gearing. The clutch is operated through

a lever (M) which locks by means of a spring on the lower rod of the frame. The sprocket wheels revolve independent of the crank axle, while the clutch, though made to slide from one side to the other so that it may lock with either sprocket, is made to revolve with the axle, and consequently turn the sprocket to which it is locked.

Gormully & Jeffery Make Reply.

THE REFEREE PUBLISHING COMPANY, Chicago.—Gentlemen:—Our attention has been called to a very misleading notice issued by the Kenwood Manufacturing Company, through the REFEREE, to the general public, in regard to the infringement suits now pending in the United States Circuit Court of northern

Illinois, northern division. The facts in the case are as follows: The Kenwood pneumatic tire, as made in 1891, infringes certain patents owned by the Gormully & Jeffery Manufacturing Company. The fact that the Kenwood tire is manufactured under other patents owned by that company is entirely irrelevant, because the Kenwood patents are subsequent to the G. & J. patents. The fact that a thing is patented does not give the patentee the right to manufacture the patented article in violation to the rights of prior and paramount patentees. What the company above referred to intend to make next year is also foreign to the matter, as the suit was based upon what they have already done this year, or, in other words, upon infringements prior to the bringing of the suit. After we get our injunction against them it will be time to inquire whether their new construction also violates our rights. We have also simply treated the Kenwood Company as we shall treat every infringer, and deem it a courtesy to inform the public of our position in the matter, that they may be warned. The mention of the company in question was simply incidental to such warning. Yours very truly,

GORMULLY & JEFFERY MFG CO.

Turning Out Royals.

The Royal Cycle Works of Marshall, Mich., are at present getting out the first lot of 200 of the '93 pattern machines. These include the Royal Limited, a 27 pound machine with purple rims. It is a handsome wheel with a 44-inch base, 10 3/4-inch head, 21 1/2 inches from seat post to crank bracket, roll threaded spokes (double butted), special bottom bracket and rear hub of a handsome design. The road wheel is the same design, and weighs 40 pounds, all on. The

ladies' wheel is light and handsome, weighing 35 pounds. These three comprise one of the handsomest lines in the country, and they will be exhibited at the Philadelphia cycle show.

The Bradley Chainless Safety.

The Bradley Chainless Bicycle Company of Albany, N. Y., which makes the wheel bearing the same name, believes it has a machine that will meet with popular favor. The gearing is certainly simple enough. We see no reason why it should not prove a success. As will be noticed in the accompanying cut, the driving gear consists of two finely-cut cog wheels on each side of the bicycle.

These are cut to fit into the hub, which is also a finely-cut cog wheel. The pedals are attached to the forward cog wheel, and only eight inches forward of the hub. The regular wheel will have a diamond frame, 30-inch wheels, and will be quite light.

Peoria Trade Doings.

B. H. Pratt of the Elastic Tip Company, Boston and Chicago, was in Peoria on business last week. The Elastic company has a pneumatic tire on the market something similar to the Boothroyd; also one on the Morgan & Wright plan.

A. G. Spalding & Bros., representative, F. J. Fanning, was in Peoria last Friday with the Victor for next year. The Victor folks will have a wheel out that will weigh 28 pounds. Spalding's line of Credendas will be greatly improved for '93. They will list with pneumatic tires at \$115.

Kirkwood, Miller & Co. are building a new repair shop and putting in a large

amount of new machinery. W. O. Wood has charge of this department.

Patee, Henning, Blake and Greenwood of the Peoria trade were all registered in Chicago last week. The four named gentlemen who represent the four different cycling houses in this city, were in search of trade.

Charles F. Vail, who was so roughly used some time ago by a pair of toughs, has now fairly recovered and is at his post of duty. LAUREL.

Solid Comfort Saddles.

Bretz & Curtis Manufacturing Company's representative is now on his way through the west placing orders for Solid Comfort saddles, and appointing agents for the Quinton Scorchers machine for 1893. The Solid Comfort saddles are now made in four patterns and can not fail to meet with popular favor. The line consists of the scorchers pattern, weight 25 ounces; the roadster, 30 ounces; the ladies', 23 ounces, and the boys', 20 ounces. The special light roadster, Quinton Scorchers will meet with success this coming season. Its lines are graceful, the machine possessing great strength, and the weight is only 30 pounds.

L. B. Whymper.

Few men in the cycle trade are more favorably or better known than L. B. Whymper—"Barney," as his friends call him. For eleven years he has served his present employers, Schoverling, Daly & Gales, Broadway, New York. When the bicycle department was added to their large business, Mr. Whymper was placed in charge and, backed by a good firm, he made the department the success it is. The firm has made a strong lead in Humbers and Gales, and dipped heavily into the sundry business. Whymper was a member

WHITWORTH CYCLES

. . . . U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

THE WHITWORTH WORKS CYCLE CO.,

P. O. Box 2225, NEW YORK, or - BIRMINGHAM, ENG.

of the old Calumet Bicycle Club of Brooklyn, which joined the Kings County Wheelmen. He is a trustee of the latter club and editor of the club's monthly journal, the smart little *Announcer*. Whympier is also a member of the Hudson County Wheelmen and the Elizabeth Athletic Club. He is a warm advocate of club papers and a gay young bachelor and good fellow generally.

Incorporation Papers Filed.

The American branch of the Coventry Machinists' Company filed articles of incorporation with the county recorder at Richmond, Ind., on Thursday of last week. According to despatches the capital stock is \$200,000, divided into shares of \$100 each. The company is incorporated for a term of fifty years, and the following directors will have charge for the first year: Edgar G. Hibbard, Micajah Henley, Johann Sedgwick, A. J. Marrett and A. S. Hill.

The company is allowed the privilege of using the Coventry, Eng., trade mark, "Swift," and all patents registered or adopted by the Coventry company become property of this company.

Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

486,914, velocipede; Pardon W. Tillinghast, Providence, R. I.; filed May 11, 1891; serial No. 392,393.

488,915, pneumatic tire; Pardon W. Tillinghast, Providence, R. I.; filed June 20, 1892; serial No. 437,375.

488,835, bicycle brake; William T. Lewis, Peoria, Ill.; filed April 14, 1892; serial No. 429,114.

489,017, wheel; Stephen H. Kimball, Everett, Mass.; filed Jan. 25, 1892; serial No. 419,191.

487,018, bicycle; Stephen H. Kimball, Everett, Mass.; filed March 12, 1892; serial No. 424,682.

487,081, support for bicycle saddles; Elial M.

Staples, Elizabeth, N. J.; filed Nov. 7, 1891; serial No. 411,177.

A New South Road.

A REFEREE man has had the pleasure of trying a new South Road, 28-pound machine, fitted with Preston-Davies tires, a cut of which appears in this issue. It is as pretty a wheel as is on the market to-day (the cut does not do it justice by any means) and is very handsomely finished and designed. The South Road is built in several weights,

30x30 feet, is separate and will be used as an engine room when certain large additions contemplated are completed. The present building is but a starter, as this company has a large capital and is preparing to do a large manufacturing business. It intends making the wheel which the public demands, to be about thirty-three to thirty-five pounds in weight. The design will be a copy of none on the market now. S. W. Goodwin, formerly with the Gendron company, has been secured and is now de-

agent for the Marion Cycle Company. In fact, he was once employed by the concern, but not since Aug. 9. He was engaged to a young lady in Detroit, borrowed from her a \$30 diamond ring, and has not been heard of since. Several hotel keepers would like to see him to the extent of a number of good-sized board bills.

Two Popular Wheels.

The King and Queen of Scorchers, made by the Centaur Cycle Company and handled in this country by Kingman & Co., Peoria; the McIntosh-Huntington Company, Cleveland, and Hulbert Bros. & Co., New York, are probably as light wheels as can be found on the market; yet they have great strength. To our knowledge a Queen of Scorchers, fitted with Dunlop racing tires, weighs less than thirty-three pounds and was in service all last season without suffering a scratch or a bend. The King of Scorchers comes in three weights—racer, twenty pounds; semi-racer, twenty-six pounds and roadster, thirty-three pounds.

The Statement Misquoted.

The New York Press, which is a rabid republican sheet, printed the following on Nov. 30:

CANTON, O., Nov. 29.—News comes from Shelby, a flourishing city in Richland county, that the big steel mill there, the only one in the country which manufactures cold drawn steel tubing, used in making bicycles, is completely demoralized as a result of the election. Not a single order has been received since Nov. 9. Several of the large bicycle manufacturers in this country were negotiating for large amounts of tubing, but have announced that they will not place any further orders, stating that if the new administration takes the tariff of 45 per cent. off bicycles they will have to go out of business.

The plant started one year ago in July on a small scale, employing but a few men. Now the buildings cover nearly five acres of ground and furnish employment to hundreds of workmen at good wages. The second largest plant is nearly

A NEW SOUTH ROAD.

the one shown the REFEREE being a 28-pounder. W. F. French & Sons, the makers, have certainly brought out a machine that will take well, and the James Cycle Company, Chicago, the American agent, should have no trouble in disposing of a large number.

Bay City's New Factory.

The National Cycle Manufacturing Company of Bay City, Mich., has a factory under way 50x110 feet and two stories in height. The enameling room,

signing the wheel. He has had five years' experience in this business and designed most of the Gendron company's machinery. F. C. Finkenstedt will probably be secretary and treasurer of the company. Henry B. Smith is president.

Look Out For Him.

A number of Michigan dealers have recently been swindled in various ways by a man giving the name of George W. Hayward. He has been posing as an

CHICAGO, Nov. 29, 1892.

EDITOR THE REFEREE:

DEAR SIR:—Please insert the following trade note in your next issue, and oblige,

Yours truly, GEO. K. BARRETT, For Marble Cycle Mfg. Co.

The well-known and popular cyclist, Col. Geo. K. Barrett, is having great success in selling the Celebrated Smalley Cycles. They are absolutely the finest thing we have yet seen in cycles—light, strong and graceful. The factory, at Plymouth, Ind., is the most completely equipped one on either side the Atlantic. We recommend our readers to write to the genial Barrett, at the Company's wholesale and retail depot, 271 Wabash Ave., Chicago.

Safety Bicycle Frames.

SHAMP SADDLE, NO. 1.
Weight, 21 oz.

WE carry a stock in three weights; racer, semi-racer and roadster; first-class frames every one of them; and what is to the point, we guarantee them. They are made for the '93 trade and are of the Humber long wheel-base variety. We needn't illustrate them. You know the popular type—looks not unlike the famous Beeston-Humber. Don't buy ancient relics because they are cheap. In the cycle trade the latest patterns are the only sellers. You know that.

Everything in the line of cycle manufacture and repair.

Weight, 16 oz.

completed and would be ready for operation within the next sixty days.

It did not seem possible, even to a good republican, that the result of the recent election could prove so fatal to one particular industry. A letter to the Shelby company, dated Dec. 3, elicited the following reply:

REFEREE PUBLISHING COMPANY.—GENTLEMEN:—Replying to yours of the 3d inst., we beg to assure you that there is no foundation whatever for the statement in the New York Press. Soon after the election the writer had an interview with a gentleman, whom he did not suspect as being a reporter, and through a running conversation, in which we both expressed regret at the turn the election had taken, I remarked to him, however, that no matter what might come of the change of administration, we had sufficient orders to run us for sixty days from that date, and he claims that he so wrote his paper, but that instead they changed same and made it read that we would have to close down in sixty days. We have not thought it wisdom to contradict the statement, as it would only provoke criticism and give it more general circulation. The facts are, we are simply overwhelmed with orders and increasing daily, and from present appearances this condition promises to continue at least through the entire season.

Thanking you very kindly for calling our attention to the matter, we are most truly yours,
THE SHELBY STEEL TUBE COMPANY,
D. L. COCKLEY, President.

Bad for Carriage Men.

A well-known buggy manufacturer of Indianapolis, stated a few days ago that the bicycle business during 1892 affected the buggy trade to the extent of 10 per cent. He also took occasion to say that there would be a falling off in the buggy business next season of at least 20 per cent, and that the bicycle would be the direct cause of it. The falling off in the buggy business has caused the implement dealers throughout the country to put in bicycles as an experiment, and in nine cases out of ten it has proved so satisfactory that the bicycle was made a part of the business.

New Hoves in Chicago.

The New Howe Machine Company has in its English factory 128 workmen from the Humber works at Beeston. As they are all experts, it is small wonder the New Howe has such a splendid reputation. Mr. Golder, American and colonial representative for the company, will remain in Chicago at least two weeks, and will shortly have a line of these wheels to show to the Chicago

trade. From Chicago Mr. Golder will journey west and south into Mexico, F. P. Prial being his companion.

Trade Men in Chicago.

During the past week Chicago has been invaded by trade men—men with tires, sundries bicycles, etc. A. Kennedy-Child, of the Warwick Cycle Company; W. M. Perrett, of the Bretz & Curtis Manufacturing Company; Stephen Golder, of the New Howe company; H. Crowther, *Bicycling World*; J. J. Prial, the *Wheel*; W. B. Troy, *Sporting Life*; and Mr. Tillinghast, of Providence, maker of the tire which bears his name.

Chicago Trade Jottings.

J. O. Blake, manager of Gormully & Jeffery's retail store, is in New York on business.

E. W. Roth of the Roth-Kasten Cycle Company of Milwaukee, was in the city last week.

Harry Pound is in Indiana in the interests of the Gormully & Jeffery Manufacturing Company.

George K. Barrett, the Marble company's inducer, has gone east to be away three or four weeks.

The St. Nicholas Manufacturing Company is employing nearly two hundred men on cycles alone.

The Fulton Machine Works, 82 Filton street, manufacturer of Thistle safeties, will move its plant Jan. 1.

The St. Nicholas Manufacturing Company's store is 380 feet deep, fifty-five feet wide and two stories in height.

Siegel, Cooper & Co., the great dealers in "everything," report a lively Christmas trade in medium grade cycles.

George Formhals, of the Gormully & Jeffery Manufacturing Company, is in Minnesota. J. Elmer Pratt is in the south.

Thomas Sanders, the English traveler, representing several English concerns, came into Chicago Wednesday from a trip to Boston.

A local manufacturer contemplates making several lines of wheels, which shall be exact copies of prominent English patterns, before the name of which the word American will be placed. An English representative seen declared that

copying his line in this way and using the name would result in a suit at law.

F. M. Smith, of the firm of F. M. Smith & Bro., St. Paul, is in the city. He will handle Liberties for St. Paul and surrounding territory.

M. A. Meader of the Ariel Cycle Company, Goshen, Ind., will arrive in Chicago next Saturday or early Monday morning from the east.

It is said that Marshall Field & Co. have been figuring on a number of cycles for a jobbing business, and that they have a practical cyclist in charge of their department.

L. A. Howell, formerly with the Union company in the east, has entered the employ of the Sterling Cycle Works of this city, for which he will travel through eastern territory.

With the Lyndhurst and a special line of wheels now being manufactured for it, the Henry Sears Company will make a lively bid for a prominent position in next season's cycle business.

G. W. Cushman, who has been in the cycle business for the past year at Harris & Ross' old stand at Oakwood square, has entered the employ of the Taylor Cycle Company.

George E. Lloyd & Co. will manufacture a few machines for a Chicago concern this year, but will not ex-

AGENTS WANTED.

E. C. STEARNS & CO., SYRACUSE, N. Y.

sady promises it will be only the very best. This firm will spread out this season and quite eclipse its last year's business.

"Elliptical" De Vore was in Chicago last Monday. Mr. De Vore has taken out 110 patents, including the much talked of elliptical sprocket wheel, in his lifetime and is still at it.

Hibbard, Spencer, Bartlett & Co. are receiving large orders for St. Nicholas safeties, which they handle for all territory west of Pittsburg. This line will be fitted with Morgan & Wright pneumatic tires.

A. Kennedy-Child, the orator of cycling, is in the city, his silvery tongue tuned for Warwicks and their perfections. Failing to secure a good Chicago firm as representative, he may open a retail store.

Morgan & Wright have shown the trade this week a racing tube weighing but six and a half ounces, of fine texture, seamless, molded ends and stretching to four times its length, regaining at once its natural length.

There is a rumor that a large willow ware firm is about to engage very extensively in the cycle business as manufacturers and retailers, with a store in cycle row. The factory of this firm is now completed and an announcement will be made soon.

Robert Lennie has resigned his position with Thomas Kane & Co., and, it is thought, has signed with the Stover Bicycle Manufacturing Company. Lennie has gained an enviable reputation as a bicycle salesman and will prove a jewel to whoever secures him.

Thorsen & Cassady have secured all selling rights for Garford saddles for territory west of Elyria. Parkhurst & Wilkinson reserve the right to all contracts of over 500 saddles. Thorsen &

Cassady will sell to the importers, dealers and manufacturers.

There will be a great shifting around in cycle row Jan. 1, and, in fact, everywhere among the cycle dealers, jobbers and manufacturers in Chicago. There is lively bidding for some of the men, and good ones are exceedingly scarce. A few short weeks and the unemployed will have drifted down quite considerably.

In an item regarding a large order for tires which the Gormully & Jeffery Manufacturing Company had received, the REFEREE was some \$135,000 out of the way. The order was for \$150,000 and not \$15,000 worth, as stated. The absence of that one little cypher made considerable difference in this case. And this is only the first order—not to carry the house through the season of 1893.

Trade Jottings.

C. S. Merrill has left the employ of the Monarch Cycle Company.

Frank Riggs is doing the cities of the south for the Kenwood Manufacturing Company.

The rims of the Campbell racer will be finished in gold and will be called the gilded rim next year.

R. J. Mecredy and Arthur Du Cros, the Irish cracks, have ordered Raleigh racers for their next year's mounts.

Beecher & Lutze will handle Royal safeties at Jackson, Mich., and George Hilsendegen at Detroit, both having placed large orders.

The Dunlop Cycle Company has secured the Raleigh agency for Ireland, and has contracted to take not less than \$40,000 worth of wheels each year. The Raleigh company has had to enlarge its factory, and is now occupying the new building recently erected. The com-

pany's novelties for next year will consist of a 21-pound racer, a light tricycle and a light ladies' wheel.

The New Howe Company will show a line of wheels at the Philadelphia cycle show, each of which will be fitted with a different set of tires.

It is said—it's a rumor yet—that Crypto geared ordinaries will be manufactured in America next season, thus saving importing fees.

Ben Hinchleffe, the old-time English racing crack, seeks a position among the Chicago manufacturers and dealers. Mr. Hinchleffe is now at Parsons, Kas.

Is was reported that Studebaker Bros., the carriage builders, were contemplating the marketing of the output of H. A. Lozier & Co. This was denied Monday, but they are contemplating handling another line.

The Grand Rapids Cycle Company, Grand Rapids, Mich., will show to friends this season a wheel on Humber lines, light, strong and very handsome. The factory is working a full force and preparing for large trade in 1893.

Should the tariff be reduced to thirty per cent on bicycles, every store and every barn in the back alleys of Coventry would be devoted to cycle building for American trade, says a prominent Englishman, who ought to know.

The retail cycle business of Bay City, Mich., is handled as follows: A. R. Baker, Victors and Ramblers; Clayton Taylor, Columbias; C. N. Gent, Humber. Many Imperials were purchased elsewhere and gave splendid satisfaction.

An aluminum bronze wheel, without a brazed joint, unnicked and unenameled, but highly polished, weighing one-third less than steel, will shortly be placed on the market. The REFEREE

will contain a full description next week.

The J. J. Warren Company, of Worcester, Mass., has issued a neat little book containing illustrations of its leather goods. There is little in the line not made by this concern. A specialty is made of tool bags, belts, saddle leathers, etc.

Stephen Golder, now in Chicago, has placed the following agencies for the New Howe: Amos Shirley, New York city, for New York state; H. B. Davies & Co., Toronto, for Canada, and the Schulenberg Cycle Company, Detroit, for Michigan.

The Illinois Cycle Works, Chicago, has been incorporated, with a capital stock of \$25,000, by William J. Yates, Frank C. Lake and John E. Crawford. H. J. Winn is the prime mover in the concern, which is now in running order and making the Flyer.

The Sercombe-Bolte Manufacturing Company has its samples for 1893 completed, and expects in a few days to start its traveler on the road. The company will be in shape to supply wheels promptly, and expects to be in the front rank in the point of sales.

George W. Hilsendegen & Co. of Detroit have contracted for a large number of Royal safeties. E. Ealsdorf & Co., Broad street, Newark, N. J., will also handle this line. The Royal Limited, twenty-seven pounds, will prove a prominent factor this coming season.

The Projectile Tubing Company of England, which makes the famous special P brand of steel tubing as used by the United States government, has just completed an immense plant at Bay Ridge, L. I. The chief promoters are President Lewis and Director Bliss of the Brooklyn City Railroad. The bicycle trade will receive their attention, and

24 Cash Prizes.

We desire to thoroughly introduce our Sunol Bicycles throughout the United States in 1893, and in order to give them such an introduction, we realize that we must advertise liberally and well. We are willing to advertise liberally, but that it may be done well, we must have a supply of bright original advertisements. We therefore make the following offer for the best 24 advertising ideas, first prize to be awarded to the author of the best, second prize to the author of the second best, etc.; decision to be made by three competent judges:

1st Prize, \$200. 2nd Prize, \$100. 3rd Prize, \$50.
 4th Prize, \$25. 5th to 24th Prize, \$10.

We will also pay \$5.00 for each idea not securing a prize that we think we can make use of. Contest closes January 15th, 1893. For particulars as to the nature of advertisements required, etc., address—

The McIntosh-Huntington Co.,
 Adv. Dep't. Cleveland, Ohio.

LEARN SOMETHING ABOUT OILERS.

An oil can should not only be clean and tight but should also be able to regulate the supply of oil. No oil should overflow causing dirt to collect on the wheel and soiling the hands and clothes. An oil can seems an unimportant article, but a poor oiler will cause a large amount of trouble. Look into the matter and buy the best. It will repay you. Price, 25c. each.

'PERFECT' POCKET OIL HOLDER Best and most convenient device for carrying an oil can on a bicycle. Thoroughly adjustable and easily attached to any part of the machine; no rattling; handsomely nickel-plated. Price, 25c. each. CUSHMAN & DENISON 172 9th Ave., - New York.	'PERFECT' Pneumatic Pump Holder Similar to oiler holder, but slightly larger. Pump is always convenient and vexatious delays avoided; handsomely nickel-plated. For sale everywhere. Price, 25c. each. CUSHMAN & DENISON 172 9th Ave., - New York.

THE PHILADELPHIA SHOW.—How the interior of the building is arranged.

the Anglo American company will control the cycle trade tube output. The works will be operated by hydraulic power, and will be ready for business Jan 1.

T. F. Rockwell starts out next week for Warman & Hazlewood. He will go west and south, and will take with him, besides the Coventry Cross, a full line of drop forgings and Foley & Webb's saddles, the latter being controlled in this country by Warman & Hazlewood.

The Phelps & Dingle Manufacturing Company writes the REFEREE to the effect that its Mr. Fulper needs to be pacified, inasmuch as a notice intended for him read "H. S. Fuller," for Fulper. The company says he is "full'er" wrath about it, so we hasten to make the correction.

The Zucker & Levett Chemical Company of New York has fitted out a large percentage of the bicycle factories of the country with its nickel-plating plants, among them the Raleigh, Queen City, Rockaway, Common Sense, Royal, Indiana, Comet and Niagara Machine companies.

Schoverling, Daly & Gales have brought out a new style luggage carrier, consisting of waterproof material fitted with straps and buckles so as to attach to the handlebar. It is designed for touring, as clothing, tools, etc., can be wrapped up in it. The carrier retails for a dollar.

Aleck Hill, manager of the Coventry Machinists' Company's Boston house, sailed for England on the Teutonic Wednesday, Nov. 3. Vincent Dugmore, of V. Dugmore & Co., Columbus avenue, Boston, accompanied Mr. Hill. Both are on business bent this trip, Hill going direct to Coventry.

The Baine & Kirkpatrick Company, Atlanta, Ga., is apt to soon control the bicycle business of the south. The concern handles Ramblers and Ariels, and is pushing its business in all localities. W. F. Moss travels for the house, while Guy Mitchell, the vice-president, handles the bicycle department.

Herbert Hadden and Howard A. Smith, of Newark, held a consultation regarding a further order of a thousand Excelsior wheels. The applications for the agencies of Bayliss & Thomas' goods have

been many according to Mr. Hadden, who showed letters from far-off California, Mexico and other points.

The National Cycle Manufacturing Company wrote us recently that as soon as its 50x109 feet, two-story, building, now nearing completion, is finished, it will begin the manufacture of a strictly high grade machine, making everything but the tires and saddles.

"There is a wrong idea," said a prominent cycle salesman, "of the inflated profits made in the cycle business, and that is leading many large firms in other lines of goods, hardware, dry goods and willow ware, to engage rather extensively in the cycle trade. Some will take a tumble, too, mark my words."

Charles B. Tewksburg, representing J. A. Hunt & Co., the Westboro, Mass., saddle makers, was in New York last week with a splendid line of saddles. He had ten different styles. A beautiful little ladies' saddle, the spring frame being covered with undressed calf leather, is the prettiest seat shown in New York this year.

D. B. Harwood, one of the pioneer business men of Bloomington, Ill., embarked in the bicycle business in a small way a year ago, doing some jobbing and retailing. This year K. B. Harwood will be associated with his father, and the firm will go in heavily on the bicycle trade. A large order for Sterlings has already been placed.

Stephen Golder is at last out of the toils of Uncle Sam's customs, where he languished for two long months. Through some informality Golder got tangled up, and the election delayed his getting the matter settled. Now, however, armed with a quarantine certificate and a fine lot of New Howes, Stephen smiles, keeps up his wonderful press work, and is selling wheels.

The following directors of the Snell Cycle Fitting Company, of Toledo, were elected Wednesday, Nov. 30: W. H. H. Smith, lumber merchant, president; Samuel Snell, general manager and vice-president; W. F. Dewey, secretary and treasurer. The capital is \$50,000, all paid up. The firm will be ready for business July 1. Contracts have been signed for a building 160x50 feet, two stories high.

The Philadelphia Show.

The Philadelphia cycle show of 1893 might as well be called the Bourse of cycling, as witness the reply of the Union Cycle Company to the committee: "We are notifying all our representatives throughout the state that we will be in attendance and can be found at stands 62 and 64, and that we shall be pleased to have them visit us there. Considering that we are doing this, we hardly think it necessary for you to notify the same people. A number of them have written us making appointments to meet us there to close deals for the ensuing year."

The prospectus sent out states that the show would open at 12, noon, each day. This was erroneous; the show will be open from 2 until 10 p. m. The Germania orchestra, the finest in Philadelphia, has been engaged to furnish music for the nine days of the show. Two of the most attractive features of the show will be the trial-against-time device and the chronograph. This is a contraption or line similar to the horse-race track used in the well-known play "A County Fair." Mr. Elliott will furnish a track which, by the use of electric motors, is made to revolve at a fearful velocity. The rider will be mounted on any make of wheel and start from one end of the stage and attempt to cover the track. If he is successful his time will be as reliable, and as accurate as though he had ridden and been timed on the open race course. Mr. Elliott says the track may be speeded to any time between one and three minutes to the mile. His chronograph is used for timing horse and bicycle races, and is capable of splitting a minute into a sixteenth and be strictly accurate. This is also an electrical device, and will cause a furor among horsemen, it being expected that several thousand equine enthusiasts will visit the show. Among the other distinct novelties at the show will be exhibited the original pneumatic tired sulky, owned and driven by Budd Doble in the record performance of Nancy Hanks. A complete list of the exhibitors to date includes:

The Ames & Frost Company.
Ariel Cycle Company.
American-Ormonde Company.
Elliott Burrell.
George R. Bidwell Cycle Company,

Bretz & Curtis Manufacturing Company.

J. F. Bailey & Co.
Buffalo Wheel Company.
Buffalo Tricycle Company.
Coventry Machinists' Company.
R. L. Coleman & Co.
C. W. Dalsen Cycle Company.
Common Sense Bicycle Company.
Cycling.
Crawford Cycle Company.
Cushman & Denison.
Elliott Hickory Cycle Company.
Eagle Cycle Manufacturing Company.
Excelsior Chemical Company.
Gormully & Jeffery Manufacturing Company.

Gendron Iron Wheel Company.
Grant Anti-Friction Ball Company.
Hulbert Bros. & Co.
Hartford Cycle Company.
Hart Cycle Company.
William W. Hart, Jr.

W. H. Wilhelm & Co.
The Wheel
Yost Manufacturing Company,

Yes, The TILLINGHAST TIRE Is In It.

Although we are not given to spread - eagle advertisements, or to running around the country soliciting orders out of season, we have been quietly at work perfecting the best pneumatic tire ever made. This tire is the same in appearance as our '92 tire, with radical improvements in the construction of same, and entirely new and perfect valve. As a matter of fact, out of the thousands of tires made and in use since April 1st, not one has yet burst. Our representative is now on the road, and we believe it to be to the interest of every manufacturer and dealer to examine our '93 tire before placing orders.

THE TILLINGHAST PNEUMATIC TIRE COMPANY,

59 CLIFFORD ST., PROVIDENCE, R. I.

Anglo-American Iron & Metal Com-
pany.

Michelin Pneumatic Tire Company.
Rooms have been set aside by the
cycle show committee for the purpose of
a general meeting and reception room
for the makers and agents and for gen-
eral use of the press.

CHRISTMAS

ISSUE ...

1892

A partial list of the contents of
This issue is here given:

TRADE DIRECTORY of the U. S. Com-
prising a list of manufacturers, im-
porters and jobbers of wheels, sundries,
parts, balls, tubings, forgings, tires and
tire materials, saddles and cycle-making
machinery.

CLUB DIRECTORY of the U. S., contain-
ing the names and addresses of about
1,500 clubs, with date of organization,
names and addresses of president and
secretary, and number of members.

"AN INTERNATIONAL MATCH," a
Christmas cycling story in three chapters
by Charles Perez Murphy; illustrated by
Henry Mayer.

"A RACE FOR LIFE AND A BRIDE," a
Christmas cycling story by Wright A.
Patterson; illustrated by F. B. Hart.

A CYCLING TRADE ARTICLE (subject
announced later), by Henry Sturme-
y, editor of the *Cyclist*, England's recog-
nized trade authority.

A CHAPTER ON CYCLING, by Ernest H.
Godbold, editor of *Bicycling News*, the
oldest cycling journal in the world.

"PNEUMATIC TIRES," an interesting
paper by F. W. Morgan, of the firm of
Morgan & Wright.

"A MODEL TRACK AND GROUNDS," A
complete description, with numerous
illustrations, of how to build and conduct
a cycle track on most approved prin-

ciples.

"A YEAR'S HISTORY," comprising a
brief review of the year's doings, with
illustrations of the principal events.

"CANADIAN CYCLING," by J. H. Ger-
rie, sporting editor of the *Toronto Mail*;
with portraits of the leading Canadian
riders.

"CYCLING ON THE COAST," with numer-
ous illustrations, by Robert A. Smythe,
of San Francisco.

"ADVERTISING IN THE CYCLE TRADE,"
by Llewellyn W. Conkling.

"THE STORY OF A WRECK," a short
story, by Guy P. Wilson.

"MY CHRISTMAS WIFE," a cycling

story, by W. E. Holding, editor of the
Cycle Record, Coventry.

"HOW I WAS MESMERIZED," a story
by C. A. Hill; illustrated by G. T. Verre-
ault.

The issue will contain many other fea-
tures, including the records to date,
pictures of cycling celebrities, and the
racing men of the United States, Canada,
England and France, cartoons and illus-
trations, a column or two of illustrated
humor, contributions by our regular and
a number of special correspondents, etc.

The issue will go to regular subscribers
and advertisers free. To others, twenty-
five cents per copy.

Ready for distribution Dec. 20.

MONARCH ROAD RACER, 32 POUNDS.

“He That Is Last ☉

☉ Shall Be First”

And so with the Tillinghast tire. Although last in the field to solicit orders for '93, it is first in rank as a Pneumatic Tire. New valve, simple, and perfectly air tight, new construction, not a tire burst made since April 1. Pure rubber; weighs less than any tire on the market. Safe from puncture from glass and stones, and at a price below some inferior tires. Our racing tire, which is new this year, weighs less than two pounds each, and one on hand this day with a hundred pounds of water to the square inch inside, shows no sign of bursting or bulging. Let others say more if they can.

THE TILLINGHAST PNEUMATIC TIRE COMPANY,
59 CLIFFORD ST., PROVIDENCE, R. I.

THE RALEIGH CYCLE CO., Ltd.

AMERICAN FACTORY AND OFFICES,

Greenwich and Bank Sts.

NEW YORK, Dec. 1, 1892.

To The Cycle Trade:

GENTLEMEN:---We are pleased to offer you an opportunity to secure the agency for your city, of the **Raleigh Cycles for 1893.**

We beg to say that, No More Complete Line can be offered you.

It costs less to sell a RALEIGH than any other bicycle manufactured, and as we allow **Good Discounts** you can make more money than you have during past seasons while handling other makes.

We are, yours very truly,

THE RALEIGH CYCLE CO., LTD.

P. S.---Have you ever heard of “ZIMMERMAN?”

ORDER CHRISTMAS NUMBERS.

The Christmas number of the REFEREE will contain much valuable information to the trade and general cycling public. The trade directory alone is worth the price, twenty-five cents per copy. Those who are not regular subscribers or advertisers should order immediately (enclosing the price named) in order that prompt delivery may be made.

HOW CAN THEY BE HELD?

It did not take long for the international conference to decide upon holding a series of contests to decide the amateur (we presume) championship of the world. Not every country that pretends to amount to anything in the cycling line was represented at the meeting, but the United States, Canada, France, Germany, Holland, Italy, Ireland, Scotland and England sent delegates. Denmark, Sweden, Russia, Switzerland and Australia did not see fit to take part. Australia, however, had no license to enter into the deliberations of the body, inasmuch as amateurs are scarce in that country. Matters pertaining to racing are gradually becoming intensely muddled. We should like to meet the individual who to-day knows absolutely how matters stand; it is doubtful if that person exists. We have been promised a cash-prize league, two classes, pure amateurs, makers' amateurs and shamateurs—probably we will continue in the old rut and have the last named; but heaven forbid! The cycle politicians, correspondents and cycle press have been wrestling with all sorts of schemes and propositions. None has solved the problem. Certain knowing ones and particular daily papers tell us that so far as the United States is concerned, we are to have pure amateurs and knick-knack prizes and makers' amateurs and cash prizes.

Granting, for argument's sake, that this is to come about, how do these fine workers intend to arrange things so that all comers may part cipe in the international races? If makers' amateurs are to form one class of riders and the pure ones another, in the future someone will not, under the amateur rule, be allowed to compete in international races. The genuine amateur, whether he be an Englishman, Frenchman,

Dutchman or American, cannot and will not care to compete with professionals, shamateurs or makers' amateurs. The best men in the country will doubtless be makers' amateurs, if such a class is formed. If the international races are for amateurs then the best men cannot compete, for as before stated, they will be in the other class. Then it will not be a championship affair, except for one particular class.

The league and all other governing bodies could permit those belonging to all these various classes to ride together for the one occasion. But would these governing bodies do this? Hardly. It is understood that a competitor in the international races must first have won the championship of the country which he represents, or he may be selected to represent his country by the governing body of the same. If the league proposes having two classes the best man in one or the other class must represent the United States and—which shall it be? This is only another difficulty to surmount. It seems as if the league has a most difficult problem to solve.

WELL-DESERVED PUNISHMENT.

The young man who beat his way from New York to Chicago and stayed in the last named city—unfortunately for all concerned, it must be admitted—has of late been "sat upon" in a most deserving manner. He would have been welcomed in Chicago by the wheelmen but for his enormous impudence. Now he is cuffed and kicked—figuratively speaking and in reality—and shunned by every peaceably inclined cyclist. Even "the push," to which he craved membership, shuns him. He certainly deserves the punishment being inflicted upon him.

A FEW PLAIN FACTS.

Under the heading "Defying the Racing Board," the REFEREE last week commented on the way the amateur rules, now existing, were being transgressed, while the news columns told how a band of record breakers was living in the south. Within the past seven days it has been hinted that this paper was wrong in some of its statements. To begin with, Mr. Patee of Peoria denies most emphatically that his firm, Rouse, Hazard & Co., is paying these southern record breakers or furnishing their expense money. We have not claimed this. But we do claim that somebody is paying at least their expenses. It is preposterous to even try to believe that young men like Johnson, Rhodes, Ballard and Myers can afford to go south and remain there a couple of months for the honor of possibly breaking a few records. Tom Eck isn't there for nothing either; and he certainly is not paying his own way.

The facts in the case are these: At last accounts A. L. Atkins was in the employ of Rouse, Hazard & Co., likewise Bart Myers; our Nashville correspondent, "Souvenir," who, by the way, is one of the party that left Illinois for the southern trip, says "the quartette is now known as the Rudge team," and further on he says "all these men are under the care of A. L. Atkins, at one time a successful manager of the Columbia team, who now represents the Rudge company's interests;" and all the men are riding one particular make of wheel. A REFEREE man has seen a letter wherein a certain southern rider states that he was asked to ride a wheel of this same make, and there are to-day letters in the REFEREE office written from Nashville on Rouse, Hazard & Co.'s note heads and by those who are on that junketing trip.

In the face of these facts can any one doubt that somebody is paying at least

the expenses of these men? The statements made herein are true in every respect and cannot be refuted. All that can be said is, if the coat fits put it on.

If Rouse, Hazard & Co., are paying these men's expenses they are not to be blamed, for it is only what other makers have been doing and will continue to do, racing board or no racing board. The REFEREE again says the amateur rule is being violated, the racing board is being defied, and there is a mighty lot of individuals that ought to be suspended instant.

REPORTS of poor trade in cycles in the United States have been floating about for some time. It might pay a few dealers to move to Winnipeg, for according to a Detroit paper, one dealer there has placed orders with English makers for 1,000 high grade wheels. This is nearly as charming as the stories told by one or two Chicago travelers we have "heard tell 'bout."

THE Chicago Globe thinks that Chief McClaghry is opposed to the use of the bicycle in the police department, probably because an officer mounted on one is liable to catch a thief once in a while. What a merry chase the mounted policeman would have in trying to catch some of Chicago's scorchers.

If the columns of an evening Milwaukee paper are to be relied upon Charley Price has arrived in Jamaica and is meeting with good success at having a splendid time, being able to compete with the English manufacturers on account of the low duties.

A New Puncture Repairer.

The Plainfield cyclist who used chewing gum to mend a puncture in his tire until he could get home, was outdone the other day by a South Jerseyman. The latter ran over a small screw in the road and his hose-pipe tire suddenly collapsed. Although the puncture was very small it would be the means of his walking home unless he could remedy it, and after a few minutes spent in "cussing" the screw, he picked it up and was about to hurl it from him when he was struck by a happy idea. In his tool bag he had a file, and with this he cut it in half, screwed it into the aperture in the tire so that the head was even with the tread, wound the tire tape around it, pumped his tire and rode home rejoicing. It is said that he has since ridden the wheel many miles without removing the plug, and thinks it the best plan yet discovered.—Newark Call.

Strength of Aluminium.

Several manufacturers in Europe are now using aluminium in the construction of cycles, says Iron. The aluminium is alloyed with a small percentage of titanium, which is said to increase the strength of the aluminium very considerably. The following are as the results of the tests of alloy and metal used for this purpose: Tensile strength of aluminium, 22,300 pounds per square inch; titanium alloy, 73,500 pounds. The tensile strength of the alloy is very great if these figures are correct. It is greater than that of wrought iron and steel (48,000 to 67,000 pounds), but it is not so great as steel wire, which has a tensile strength of nearly 200,000 per square inch.

The Portland (Me.) Wheel Club was reorganized last week with officers as follows: President, Dr. George E. Dow; vice president and captain, Philip C. Kilborn; secretary, Charles Steele; treasurer, B. H. Farnsworth; club committee, president, vice president, treasurer, J. M. Mason and W. W. Jordan.

CURRENT COMMENT.

"A Beatrice boy was run over by a bicycle and badly bruised, and so was the rider of the dangerous two-wheeled contraption."

"A little son of Al. Andrea, three miles from Wilsonville, was kicked in the face by a colt and lay unconscious four days. He is now thought to be out of danger."

"While attending a sale at Harvard the other day, George Wyckoff was kicked in the mouth by a vicious horse. He will wear store teeth after his gums settle."

[These items were taken from the paper being only separated by a couple of other squibs.—Ed.]

The above clipping, sent to an eastern paper by J. B. McConnell, of Lincoln, Neb., shows very plainly that the day of prejudice is not yet drawn to a close. Why it is that people in this wonderful country will allow their personal, unreasoning prejudice to get away with their sense of the eternal fitness of things, I don't understand. A man, woman or child might be trampled to death beneath the feet of a runaway horse, or crushed under the wheels of a street-car or omnibus, or, as in the clipping, kicked into smithereens by a vicious colt without creating any surprise or more than a passing notice; probably blaming the late lamented for getting in the way. But if a miserable bicycle man happens to run into some awkward citizen there is a terrible row, and one would think from the fuss made that he had taken particular pains to occasion the bump, when as everyone who will stop to think should know that the rider is in absolutely more danger than the pedestrian. It is time the rural press stopped such foolish itemizing. It does them no good for they might as well try the Mrs. Partington act as to influence the tide which sets toward bicycling; as a business and as a sport, while it does do a certain amount of harm by keeping ignorant and unthinking people in the rut of prejudice.

I am glad to learn that "Mr. Snaix" did not get a league membership. The motive which prompted "the push" in forwarding the name of this illustrious gentleman to the L. A. W. secretary was in a way laudable. They simply wanted to call attention in a very pointed manner to the ridiculous way in which the official organ pretends to protect the L. A. W. from unwelcome applicants, and they most eminently succeeded. I do not believe they intended an insult to the good body of wheelmen, but that the whole business was simply an act of the moment by some of the boys. Let Mr. Snaix be a shining example, oh, official organ, and let us have the names and addresses of all applicants. It is the wiser plan. The L. A. W. waxeth big and strong, and no corporation banded together for business purposes can control them long. Better stop trying. The darkey, the Chinaman and club dogs and cats are not desirable members of the greatest organization banded together for the good of the greatest sport in the world.

LA COTE MAL TAILE.

Nancy Hanks to the City of Paris.

Speed on, O shapely ship! speed on,
From shore to shore;

There's much between
Your 5:14

And my 2:04.

Speed on, O shapely ship! speed on!

But stop—may I inquire,
If on your last

You used the fast

Pneumatic tire?—Columbus News.

The December number of *Good Roads* will be an "Illinois edition." It will contain articles by Governor-elect Altgeld and prominent editors and public men of that state.

ORDER CHRISTMAS NUMBERS.

The Christmas number of the REFEREE will contain much valuable information to the trade and general cycling public. The trade directory alone is worth the price, twenty-five cents per copy. Those who are not regular subscribers or advertisers should order immediately (enclosing the price named) in order that prompt delivery may be made.

Among the callers at the REFEREE'S eastern office the past week were: Mr. Collins, of Collins & Nuttall; James T. Allen, United States patent office, Washington, D. C.; Charles Sulzner, Philadelphia; H. Arnold, London; G. von Art, Hanover, Germany; T. Stebbins, Coventry; H. Drexel, San Francisco; W. Fish, Newark, N. J.; M. Quinlon, R. L. Coleman and others.

Joseph Chamberlain on Professionals.

Hon. Joseph Chamberlain of Birmingham—called Joe by English liberals and radicals—is a liberal-unionist by political profession, and was at one time an ardent admirer of the man who chops down trees for exercise—Gladstone by name. The Hon. Joseph is acknowledged to be a very liberal and brainy man, and a good speaker. The Birchfield Harriers (all English athletes know this midland organization) did a happy thing when they invited "Brummager Joe" to their meeting recently, but how they must have winked the other eye when Joseph said: "Well, one of the great distinguishing features of this association is that it is an amateur association. Mind, I have nothing to say against professional sport, because it shows us what is the greatest excellence which can be achieved in this particular direction; but of course professional sport is fatal to amateur sport, because the whole meaning and sense of amateur sport is that it gives healthful recreation, whereas professional sport is, of course, business and a means of subsistence. But not only does it give you recreation—and remember, that is not a matter of slight importance—but I am one of those who think that the question of our sports is sometimes of as much importance as the question of our work, and that a man cannot do his work well unless he has a fair amount of recreation and even of innocent excitement. Lastly, I may say that such an association as this brings men into friendly relationship, and helps to create those social relations which add so much to the pleasure of life."

Mr. Chamberlain sized up the question correctly, and there is cash-prize logic and pure amateur sermons galore in the above. Raymond, *et al*, read it, and read it aright, and then shut up shop in '98 if you can't "solve" the above.

Ministerial Scorchers

Brooklyn is not such a bad place after all, notwithstanding some of the clergy said it was naughty to ride bicycles on Sunday and a spinster called the boys "callow things." We must be charit-

able, because twelve clergymen from various Protestant churches in Brooklyn met Saturday night in St. Peter's Lutheran Church on Bedford avenue to form a bicycle club. Rev. John J. Heischman presided. The object of the proposed organization is to create an opinion favorable to the bicycle as a means of exercise for the clergy, and to have parochial visits made on a wheel. This feature, however, will be delayed until the Brooklyn streets are better paved. In the meantime the Brooklyn pastors will ride once a week in the country, and may take a cycling trip in Europe. They want the new organization to be known as the Clerical Cycle Club. No uniform has yet been suggested, but the members propose to lay aside all doctrinal differences when they ride out together.

Ten ministers handed in their names to the Rev. J. Winslow Hegeman, who acted as secretary of the meeting on Saturday.

A Noted Club.

It is always a pleasure to visit Springfield, Mass., because there you meet a real live club, and during a recent visit

the postponement of the second day had not occurred the profits would have been much larger.

Felt Hurt and Cold.

The Recorder man evidently "saw the wrong people" when he visited Chicopee Falls recent y, and gave the concern the following vicious little dig:

To reach the factory of the Overman company, at Chicopee Falls, requires a ride of nearly an hour in electric cars. On reaching the falls a short walk brings one to the stronghold of spring frames and pacemakers. Upon announcing yourself, although invited, you are told that no business can be transacted; mind, too, before you have stated your errand. Mr. Overman is at his shooting box, and with a curt dismissal the door is shown to you, with a privilege of seeking shelter from the storm where you will. The only recourse is a journey, quick as limited trains will take you, to Boston, where hospitality is sure to greet you.

I wonder who it was that Boardman saw; surely not George Powell nor Superintendent of Agencies Morgan; and certainly not Andy McGarrett. Some office boy got his work in on the Recorder man. Office boys will do such things if one is timid. President Overman is always most courteous to visitors—so are his employees, as a rule—but you are not allowed to gallop of your own sweet will all over the place. The same can be said of many other similar institutions, and rightly so, for visitors generally cause confusion among the employees. Mr. Overman wrote a cordial and soothing letter to the Recorder man, assuring

in the race of civilization, and is not "in it" in the race when free postal delivery and good roads are up for discussion. "President" Bates calls attention to John Wanamaker's allusion to the subject in his last Sunday school—I mean postoffice report, and then the Michigan-der made a big mistake. Anything that the superintendent of Bethany Sunday school suggests in his brief but happily expiring moments of office will be sat upon by a robust democratic majority until it is as flat as some of John's bargain counter ribbons. This is unfortunate, but it is true, and if "President" Bates has any suggestions to make to Grover & Co. he must wait until next March to do so. Partizan politics has nothing to do with the question, did you remark? You will find it so all the same, much as all true reformers regret it. Then again, too many petitions will cause confusion, and the hoary headed members of the senate will commence to think those cyclists want to run things pretty strong, and may, in the language of Judge Cobb, enquire, "Where are we at?" The Bates petition should be smothered in its infancy.

ENGLISH PRESS OPINIONS.

Those Dress Competitions.

The staff of the I. C. are all practical people, and do not take their ideas at second hand. They prefer "not to prophesy unless they know"—and therefore one of them, who is entitled to speak with some authority on this particular subject, wishes to protest against the absurd manner in which nearly every wheel paper has been quoting some recent American remarks on cycling dress for ladies, without any apparent sense of their utter foolishness. These "dress competitions," which are so largely advertised and so much quoted, are talk pure and simple. Nine-tenths of the proposed costumes have never been made and never will be, for the reason that they are ugly, impracticable, extremely conspicuous, and—most important of all—could not by any possibility be worn off the machine. The remaining tenth are ordinary street costumes. As to the various paragraphs recommending divided skirts for cycling women, and talking glibly of them as existing facts, they are about as worthy of attention as the periodical reports of entirely apocryphal cycling elopements and funerals that crop up to make stop-gaps from time to time in the dead season. Who ever saw a lady cyclist in such a costume, and who ever will? It has no practical advantage whatever for cycling, and its disadvantages do not even need mentioning. The real reform that is needed in cycling dress for women is the shortening of the ordinary dress skirt, and that improvement is likely to be affected in a year or so, since short skirts for walking are being more and more widely advertised every day, and cycling modes go hand in hand with street fashions. We have touched upon this subject at some length, since the nonsense that is being written about it is incalculable and likely to cause many false impressions. The circus style of costume may take prizes in "dress competitions," but it will remain where it began—on paper. It does quite enough harm there to feminine cycling, since it very probably impresses the outside public with the undesirable idea that feminine Merry Andrews are to be seen cycling in one place if not in another.—*Irish Cyclist*.

**

A Quaint Episode.

One of the funniest of all the Zimmerman developments is the little theory set up by a contemporary that no one at

English wheelmen tempt Providence and public opinion by holding "cigarette concerts." We have never heard a cigarette in concert action, but if its music be equal to the violence of its odor, it must be robust enough to be heard by the inmates of a deaf and dumb asylum.—*Detroit News*.

of a REFEREE correspondent he was greatly impressed with the large attendance at the club house on a very cold night.

The club held its monthly meeting and elected thirteen new members. The nominating committee reported a list of officers as follows: Secretary, W. C. Colton; treasurer, L. H. Adams, H. H. Bowman and Dr. D. H. Allis; directors, D. E. Miller, J. D. Law, F. H. Weston, W. S. Warriner, E. E. Sawtell, H. H. Bosworth, H. A. Jordan, F. G. Jensen, I. M. Allen, H. W. Southworth, H. D. Taylor, J. W. Drown, F. M. Coe, Dr. E. C. Collins, J. D. Norton; captain, F. H. Weston, F. W. Westervelt, H. E. Schmuck; first lieutenant, E. H. Hildreth, F. C. Hubbard, H. B. Trask; second lieutenant, F. C. Graves, C. B. Trask, W. F. Mellows. The directors made an appropriation of \$200 for additional apparatus for the gymnasium, and the social committee was authorized to inaugurate a series of dances to take place probably at Union Armory. The trustees reported that the profits in the tournament were \$4,298. It is thought that if

him that no slight was intended, and that he would like to see him at any time by appointment. This soothed the mad storm that surged in Boardman's breast.

**

One Thing at a Time.

Mistaken and misguided zeal does more harm than good at times, and the proposed petition by the genial "President" Bates seems to come under that distinction. Just at the present time there is going the rounds a widely circulated petition to the people at Washington for good roads, which bids fair to receive considerable attention at the hands of the present and incoming administrations. "President" Bates tells the "powers that be" in his petition that the rural portions of the U. S. should have free postal delivery (we presume the majority know that) and that the agriculturalist should have his missives of sorrow and cheer delivered to him by these "bicycle fellers" who have to call a good many hayseeds "road hogs." The ex-editor goes on to assure congress that this great country is several laps behind

KING OF RACERS, 32 POUNDS, \$150.00.

Agents will make no mistake in making them their Leaders. We are ready to talk terms and territory for 1893. Let us hear from you.

Kirkwood, Miller & Co., PEORIA, ILL.

P. S. We have no old stock to sell. All our wheels are new and up to date.

K., M. & Co.

THE TELEPHONE

Occupies a Seat in the Front Row.

The Custom Officials Brand Them Quality "A."

1893. — 1893.

There is no question that we have one of the Finest Lines of Bicycles in America.

QUEEN OF RACERS, 35 POUNDS, \$150.00.

Herne Hill—Mr. J. S. White included—had anything whatever to do with the training of the American crack, and that Mr. J. McDermott was alone responsible for his success. It's a funny theory, but it won't hold water from a physical point of view. Zimmerman came on slowly but surely, and before Mr. McDermott's arrival broke the flying quarrier record, then his brother-in-law came, arriving two or three days before the Polytechnic meeting. Now no one can make a physical improvement of many yards per quarter-mile in a peculiarly slow training man like Zimmerman in three days, though people who fancy that a fifty-mile race does not make a man stiff may fancy so; and Zimmerman was only just proportionately better at the Polytechnic meeting than he was at the county—physically. Where the real advantage came from the gentlemen who seek to disparage Herne Hill do not know. It was purely and wholly a mental effect. Arthur Augustus was homesick, poor thing, a little doubtful of himself, and he wanted the companionship of his sister and brother-in-law, and the sound advice and judgment of the latter, and when he got it he went on to victory. Mr. McDermott would be the very last person to claim that he could make Zimmerman fit to race in seventy-two hours, and it is hopeless to expect any practical cyclist to swallow this fiction.

**

Tricycle Racing Dead.

The news that we are to be spared those precious farces—ordinary bicycle championships—will probably shock nobody but George Lacy Hillier, nor do we think that any worse effect would be produced in the tricycle races also were allowed to go by the board. In England tricycle racing is as dead as any door nail, and in these days of championships

galore, we think they might very well be spared. If ever three-wheel racing should become popular again, they could easily be revived; but until that day they might well be allowed to slide, since at the present time their chief value lies in the fact that they admit a few second raters to earn a little cheap notoriety, or, at best, save habitual safetyists the same turn. Such a value is scarcely rateable, except to the notoriety hunters themselves.—*British Sport.*

**

A Daily Cycling Paper.

We like enterprise, whether in England or abroad, and we are pleased to announce a bit of real enterprise on the part of our excellent confrere, the *Veloce Sport*. The management of that journal is not content with having the best cycling paper on the Continent; they aim even higher. Their new venture, which is to commence its career with the new year, is a startling departure from the ordinary paths of wheel journalism, for it is to be a daily cycling paper, published in Paris. We can not say more about it at present, except to note that Paul Rosseau will manage it well.—*Wheeling.*

**

Come Out, Waller.

"Waller, the California twenty-four hour rider, is a tall, muscularly-built giant, and is able to set a twenty-miles-an-hour pace and hold it for a hundred miles, he says."—*Exc.* Then, Waller, why don't you go and do it? The cycling world has been waiting for just such a man as you these many years.—*Irish Cyclist.*

The Waterville (Me.) Wheel Club has been organized with A. B. Cook, president; M. L. Keene, vice president and captain; H. W. Pollard, secretary; H. F. Davidson, treasurer.

DOINGS AT BUFFALO.

The Woman's Wheel and Athletic Club to Build.

BUFFALO, Dec. 12.—The Women's Wheel and Athletic Club is now a most flourishing affair, numbering as it does about sixty members. Included in its membership roll are the names of many of Buffalo's brightest and best of the fair sex. This society has been organized since July, 1888, at which time it devoted its entire attention to wheeling, but since then it has broadened its constitution and by-laws, so that it now embraces the following divisions: Pedestrian, organized 1889; bowling, 1890, and billiards, 1891. It is an organization to be proud of, and its meetings are conducted after the business ideas of all societies. It is the intention of members to purchase a parcel of land in a convenient locality and erect a bowling alley thereon. This place will be fitted up after the most modern manner, and will contain rooms for assembly or business meetings, offices and a cafe will be added, where luncheons or light refreshments will be served. They hope to have the patronage of all the ladies' bowling and the mixed bowling clubs in Buffalo. This movement will be inaugurated very soon, as the committee has its eye on several very fine sites, and as soon as this selection is made, the purchase will follow, and then up will go the house. The list of officials embraces a president, vice-president, secretary and treasurer, with captains for the several divisions. Their entrance fee is \$1 and the annual dues are \$3. They now are and have been since the organization holding the business meetings at the home of the Buffalo Bicycle Club, which has most generously offered them the free use of the house as long as they wish or have use for a meeting place.

During the past season these ladies have visited all the interesting places in this vicinity, both afoot and awheel. The destination has always been some place of special interest, where a lecture was delivered upon the historic features and the mechanical interests of the locality, so that by this method a quantity of very valuable information was acquired.

Elections and nominations are absorbing the attention of the various clubs about this time. The latest is that of the Mohawk Athletic and Cycling Club, which has elected the following officers: President, Frank L. Beyer; vice-president, U. S. Deitzer; secretary, N. W. A. Becker; treasurer, C. J. Planz; athletic and field captain, F. H. Oelrich; first lieutenant, Charles F. Wedell; second lieutenant, W. G. Parker; captain cycling section, J. S. McFarland; first lieutenant, F. A. Kemp. There is a strong desire for the formation of a football team, but the rules under which it would be governed are most likely to be a severe stumbling block.

The Iroquois A. C. held its annual election during the past week, resulting as follows: President, Col. L. P. Richert; first vice-president, A. J. Rauert; second vice-president; William McPherson; corresponding secretary, Fred C. Schumacher; financial secretary, C. O. Smith; recording secretary, William Vincent; directors, F. J. Scott and George Cosander. WILLIE DUNN.

The Hudson County Wheelmen have made nominations for the annual election, which will take place next month, as follows: President, C. V. Tuthill; vice president, J. Appleby; secretary, Edward Romaine; treasurer, T. J. Cassidy; trustees, George H. Earl, F. Kerr, F. E. Rich, T. Blood and J. Cordner.

The students at Colorado Springs, Col., have organized a club.

INTERNATIONAL RACE RULES.

An Apparent Attempt to Let in the Makers' Amateurs.

The complete organization of the International Cyclists' Association, which occurred in London some two weeks since, will possibly put matters in such a shape as to allow some one to capture the title of world's champion. As will be seen in the matter which follows, the delegates, as a body, have prepared and adopted what might be called a constitution and set of rules. The rules are, practically, the ordinary track regulations, to which many objections may be found. It would seem as if the representatives from so many different countries could at least think up a few things tending to the betterment of track regulations; the rules as adopted are behind the times and not adapted to the present age.

Rule F defines an amateur who has never engaged in, nor assisted in, nor taught any athletic exercise for money, or other remuneration, nor knowingly competed with or against a professional for a prize of any description, or in public (except at a meeting specially sanctioned in writing by the union of the country in which he resides), or who is recognized as an amateur by the ruling body of his country. This is beautifully worded—so as to let in the makers' amateurs, it appears. But the moment makers' amateurs begin operations they ride for cash and then they are not amateurs under this rule. The result will be that we will have no makers' amateurs next season or the best men of the United States will not be eligible to compete in the international events.

The rules follow:

(A) The International Cyclists' Association of the recognized governing bodies of amateur cycling sport throughout the world is formed expressly and solely for the holding of the "Amateur Cycling Championships of the World," and for the proper conduct and carrying out thereof.

(B) The unions of all countries shall be eligible to membership in the international association, providing they enforce a strict amateur rule. The board of the international association, consisting of one delegate from each country that has already joined, to be sole judge whether the amateur rule of any union desiring membership is sufficiently stringent and properly enforced.

(C) Membership in the international association may be conferred on a resolution to join being duly passed by a two-thirds majority of the executive body of the union in the country desiring membership.

(D) Each union taking part in the international association shall furnish the sum annually voted by the board to cover clerical, postal and other necessary expenses, and shall be responsible for the carrying out of the meetings on the terms of the agreement below, when called upon to do so.

(E) The world's championships shall be open to riders of all classes of single bicycles, and shall be held at the following distances as follows:

1 mile for short-distance championship.
10 kilometres for mid-distance championship.
100 kilometres (with pacemakers for each rider) for long-distance championships; also, if possible, a team race of teams of not more than four, the distance for which we suggest be ten kilometres.

(F) Only riders are eligible to compete

who have won the amateur championships of their respective countries, or who have been officially chosen by the body ruling the cycling sport in their own countries, and who are amateurs according to the following definition:

"An amateur is one who has never engaged in, nor assisted in, nor taught any athletic exercise for money, or other remuneration, nor knowingly competed with or against a professional for a prize of any description, or in public (except at a meeting specially sanctioned in writing by the union of the country in which he resides), or who is recognized as an amateur by the ruling body of his country."

(G) The championship meetings shall not be held later than Sept. 30, nor earlier than Aug. 1 of each year, or at such other time as may be decided by the board.

(H) The venue of the meetings shall be changed each year, no country to have the privilege of holding a second meeting until all the countries of the international association sending competitors have had the opportunity of conducting a meeting. A country that has not sent any competitor for three consecutive years shall be deemed to have forfeited its right to hold a championship meeting of the international association until the next series.

(I) The places or meetings shall be decided by a majority vote of the international board.

(J) Each country sending competitors to any one meeting shall be entitled to two official representatives on the board of management of that particular meeting.

(K) The country carrying out each meeting, or series of meetings, shall take one-half of the net profits, the other half to be divided equally amongst the other countries sending competitors. In the event of one other country only competing, then the managing union shall take two-thirds and the other one third of the profits.

(L) The expenses of the competitors may be paid by the unions of the countries they represent.

(M) The prizes of the championships shall consist of special gold medals, and in the team race of a shield, to be approved by the board, each rider competing also being presented with a silver medal recording his performance.

(N) The races shall, in all cases, be held on a fair track, which should be, at least, 400 metres in circumference (measured .30 metre from the inside edge), 7 metres in width, and 1.25 metres in the banking, the choice of the track to rest entirely with the country holding the meeting. The foregoing measurements to be adhered to as far as possible.

(P) The rules under which the meetings shall be conducted are as follows:

1. Unions desirous of sending competitors must notify their intention, together with the names of the competitors, to the honorary secretary of the union managing the meeting, in sufficient time for him to receive the entries not later than seven days prior to the date fixed for holding the meeting.

2. Any dispute whatever which may arise in connection with any of the contests shall, if either of the parties to such dispute so desire, be referred to the board of management of the meeting, whose decision shall be final.

3. No union or governing body in the international association shall hold or recognize within its territory any race which shall be announced as for "the championship of the world," or a "world's championship," other than the races held by instruction and on behalf of the international association, and every union in the international association shall take every step in its power to prevent the holding of any such meeting.

4. Until decided otherwise by the international board, all world's championships shall be "bicycle races," the definition of a bicycle for such purpose being—"Any two-wheeled one-track machine carrying one rider."

5. Any objection respecting foul riding during a race shall be made in writing to the judge as soon as possible after the race, and shall be considered by the board of management of the meeting at the earliest opportunity. If possible, on the ground,

6. A bell shall be rung before each heat or race, and after sufficient time has been allowed for competitors to get to the mark, a start shall be effected by the firing of a pistol.

7.—Attendants, when pushing off competitors, must keep both feet behind the mark. Should the attendant cross the mark with either foot whilst starting such competitor, the competitor shall be liable to disqualification.

8.—In starting, the foremost part of the competitor's machine in contact with the ground must be placed on the mark.

9.—Should any competitor start before the signal, the men shall be called back, the offending competitor warned by the judge, and should he repeat the offence, he shall be ruled out of the race.

10.—As far as possible the times on the programme shall be adhered to, but no race or heat may be started before the stated time except with the consent of all the competitors concerned.

11.—Before the race lots shall be drawn by the competitors for positions, counting from the inside of the track.

12.—None but the officials of the meeting, the press, the competitors and attendants shall be allowed within the enclosure, except by special permission of the secretary or referee of the meeting.

13.—Competitors and their attendants shall be allowed within the enclosure only during the time between the heats preceding and following that in which they are engaged.

14.—Every competitor must wear a scarf of a color or colors distinctive of the country he represents, also a number corresponding with his number in the programme, the ticket bearing the number being placed on the back of the competitor.

15.—Competitors may dismount during a race at their pleasure, and may run with their machines, but they must keep to the extreme outside of the track whenever dismounted.

16.—A competitor passing another must always pass on the outside of the track, unless the man who is passed be dismounted, or has retired from the contest, and must be a clear machine's length ahead before taking ground in front of his opponent. The inside man must allow room for his opponent to pass, and any competitor guilty of foul or unfair riding shall be liable to disqualification.

17.—If a machine becomes disabled in the course of a race, the rider shall be allowed to use another.

18.—The officials shall consist of referee, judges, umpires, starters, timekeeper or timekeepers, clerk of the course, lap-scorers, and the members of the race committee, including the secretary of the meeting.

19.—It shall be the duty of the judges to declare the placed men in every heat.

20.—It shall be the duty of the referee to instruct the umpires, to act as he may think fit in cases of misconduct by attendants, and to disqualify any competitors who have become liable to disqualification. His decision shall in all cases be final.

21.—In starting, the judges shall give their instructions to the competitors and attendants, and shall see that the men are placed in position, after having caused them to draw lots; and every competitor shall go to the mark so drawn, and any refusing to do so shall be liable to disqualification by the referee.

22.—It shall be the duty of the umpires to watch the riding, and to report to the referee any competitor or competitors whose riding they consider unfair.

23.—It shall be the duty of the starter, when it is reported to him by the judges that all the competitors are ready, to see that the timekeeper is warned, and before starting the men to say "Mount," in a few seconds after to say "Are you ready?" and, if no reply to the contrary be given, to effect the start by report of pistol.

24.—In case of a fall within 25 yards of the start, the competitors shall be called back by the starter by the ringing of a bell and restarted. Any competitor refusing to obey the starter shall be at once disqualified by the referee.

25.—It shall be the duty of the timekeeper or timekeepers to take the times of the first and second in each race, and such other times as the secretary of the meeting may have previously arranged. The timekeepers shall be approved by the unions they represent.

26.—It shall be the duty of the clerks of the course to call over the names of the competitors in the dressing room before the starting of each heat, to ring the bell shortly before the time that

each heat should be started, and to see that the competitors have their numbers properly exhibited.

27.—It shall be the duty of the lap-scorers to check the number of laps ridden by every competitor, and to give the distance ridden by any competitor at any point when requested to do so by timekeeper or judge. In long distance races a lap-scorer should be provided for every two competitors, and an additional one to check the laps of the whole of the riders. One of them shall be appointed to clearly indicate to the various competitors the number of laps they have still to cover, and the same official shall denote the last lap by the ringing of a bell.

28.—It shall be the duty of the board of management of the meeting to appoint the officers, to conduct generally the business of the meeting, and to adjudicate on any points not provided for.

29.—It shall be the duty of the secretary of the meeting, under the direction of the board, to see that the various officials are at their respective posts before the first race is started, to provide for any contingency that may arise, and generally to conduct the meeting.

30.—The board of management of the meeting reserve the power to postpone all or any of the races in cases when they think it necessary, but in no case shall a race be postponed longer than seven days.

31.—The finish of all races shall be judged by the first part of the machine which touches the tape, which shall be fastened flat on the ground at the winning post.

* * *

A Fast Californian.

Wilbur F. Edwards, of the Garden City Cyclers and the Palo Alto Club, lives at San Jose, Cal., and attends the Stanford University at Palo Alto. During the racing season young Edwards has proved his ability to defeat almost any man on the coast, unless it be Foster. He was more than successful this year,

having won many firsts, though he only began riding June 1. He is small and muscular and rides comparatively erect in position. He is the son of a prosperous farmer, banker and capitalist, is popular, and before another season passes his friends think he will show his heels to the best of them.

* * *

General Race Notes.

The wheelmen of Salt Lake City have decided to build a three-lap track.

San Antonio, Tex., is badly in need of a track, and an effort will be made to have one for next year.

Haydin Coffin, who plays the principal parts in Lillian Russell's pieces, is an old-time English racing man of great fame, a member of the Druid's Bicycle Club of England.

The Illinois Cycling Club will spend no money in placing a racing team on the path next season. Three gentlemen who would see the club prominently known on the path were up for nomination at the recent caucus and were snowed under. They may, however, present an independent ticket at the election next month. The Illinois was once next to

"SURE THING."

At the PHILADELPHIA Cycle Show.

20-Pound Rudge Racer (Red Rims).

No effort will be spared to have the American product equal to or better in finish and workmanship than any cycle in the market.

Our terms are more favorable than ever, and all dealers and wheelmen should see samples before making their '93 purchases.

Catalogue soon ready. Correspondence solicited.

ROUSE, HAZARD & CO., - 89 G Street, - PEORIA, ILL.

EXCLUSIVE MANUFACTURERS AND IMPORTERS FOR THE UNITED STATES.

the Chicago in local reputation on the road and path.

Shorland and his geared ordinary, of the Crypto pattern, are sure winners of next season's Cuca grind, as the Englishmen term the annual twenty-four hour race for the Cuca Cocoa cup at Herne Hill track. Shorland is invincible, Stephen Golder says.

H. L. Saltonstall of the Elizabeth Athletic Cyclers offers a \$1,000 prize for the World's Fair race meet in 1893. Mr. Saltonstall is a Wall street broker and very much of a sportsman. He will give a dinner party on Dec. 15, to which many celebrities have been invited.

The games and reception of the Twenty-second Regiment (New York) Athletic Association were held last Thursday evening. The most exciting event was the two-mile bicycle race. H. S. Thomson and J. W. Judge, the scratch men, kept close together throughout, the latter winning by a yard. H. Brown, with seventy yards, was third. The time was 5:53.

Fred Patee denies most emphatically that there are any racing men in the south at Rouse, Hazard & Co.'s expense. He declares that he is ready and willing to be investigated. Rhodes, Johnson and Eck were in the south and Patee asked them to stay and go for records. In no way, he says, is the amateur law, as defined by eastern amateurs this season, being transgressed.

The California Association of Cycling Clubs has decided to give a series of road races on the last Sundays in January, February and March. The first race of this series will be twenty-five miles, scratch, over the San Leandro triangle, for two prizes, the selection of which was left to the executive committee. Entries will be limited to five men from each association club, the competition,

however, to be individual. The other two events will probably be ten and fifteen miles, respectively, but the details will not be settled until the next meeting of the association.

The coast is to have a circuit next season. The California Association of Cycling Clubs has been considering the matter somewhat extensively and has left it to the committee on membership and inter-club relations, which will take into consideration the existing tracks, the probability of others now projected being completed, and, as far as possible, the wishes of the various clubs.

The racing board of the Milwaukee Wheelmen has completed the programme for the holiday tournaments. The list of events is as follows: One-mile handicap, two-mile open, one mile 3:00 class, one-mile open, two-mile handicap, one-mile 2:45 class, five-mile open, one-mile Milwaukee championship for the Gilowski medal, five-mile handicap, half-mile open and one-mile 3:30 class. The entry list will close Thursday, Dec. 22. The entry fee will be one dollar, with fifty cents additional for each event. A number of Chicago men have decided to ride at this tournament.

AN AERIAL BICYCLE.

An Interesting Machine Designed to Perambulate the Atmosphere.

We have had land bicycles and aquatic bicycles, and now by the picture it is evident that we may have aerial bicycles, says the New York World. The question of aerial travel has been a perplexing one, and all attempts to solve it have thus far proved without avail. Inflated bags, parachutes and balloons have been tried and found wanting. The design pictured here represents a cigar shaped hollow apparatus, to which is attached a geared bicycle. It may possibly be

better to allow the inventor to describe it, as he probably knows more about it than any one else. His letter to the World is as follows:

DEAR SIR:—Inclosed please find a drawing of a flying machine designed by myself.

I submit my design for yours and the people's (at large) approval. I am only a poor boy, and can't test or experiment with this machine on account of cost.

I believe that flying is possible and that some such machine as mine will be a practicable one.

It is so easy understood that hardly an explanation is necessary; by using a cigar-shaped balloon speed and steering is practicable, the screw is responsible for the flight, unless in flying with the wind, and by sliding operator's seat backward or forward either dip or ascent is possible. The main drive wheel is similar to a large bicycle wheel, and in starting off runs on the ground also in lighting, which has to be done obliquely.

Hoping that some man of philanthropic nature may become interested in it, I trust to you to print it in your valuable paper, of which I am a subscriber. Yours in faith, A. J. SNYDER. Grimsby, Ont., Nov. 24, 1892.

Work in the Missouri Division.

ST. LOUIS, Dec. 10.—Now that the election for chief consul is over, members of the Missouri division are getting quantities of advice in the local wheel columns to forget the election and settle down to hustling for new members. The hustle idea is not bad, but as to forgetting, that is not so easy, for the sore place still hurts. It is not known here how the members through the state look upon the result, but there is no doubt that there is a good deal of disappointment here. Holm got elected through the same cause that led to Davis' defeat.

If both men had been better known throughout the state Holm would undoubtedly have got less votes and Davis more. Well, we will have to bury the hatchet for the time being and trust in better luck next year to get a live and popular man in the place.

The first job the new board of officers of the Missouri division will get at will be the revising of the constitution and by-laws, and goodness knows they need it. The idea of a constitution that lets one man have the power to count the ballots is ridiculous, and it is especially so when that one man happens to be running for office himself. Several other changes will be taken up. Rumor has it that a well-known local prohibitionist will try and introduce a clause making it impossible for any one to hold office who is in any way connected with a brewery or anything else in that line.

Rather Surprised William.

W. M. Perrett, of Philadelphia, had heard of the "rag shop" through the cycling papers, and when he came to Chicago intended to take one meal at least at the place with the delectable name. He made inquiries, and on being told it was that elegant marble restaurant, he expressed surprise, as he had expected to find a small corner room just large enough to accommodate a score or two of cyclists instead of a palatial dining room the equal of John Wanamaker's in slow going Philadelphia.

CANADIAN EXCURSIONS.

The Chicago & Grand Trunk Railway will sell excursion tickets to all points in Canada at half rates December 20, 21 and 22, good to return until January 10, 1893. Ticket office 103 Clark street, corner Washington.—Adv.

Marshalltown wants the next Iowa division meet.

Whist Playing at Buffalo.

BUFFALO, Dec. 12.—The Buffalo Bicycle Club has joined the Whist Society and now everyone plays whist every night, Sunday's excepted. This has been going on for some weeks, and as a consequence the members felt as though they were quite proficient in this seductive and fascinating pastime. Accordingly the Whist Club of Rochester was requested to give them a call. In response to this invitation, a delegation of fourteen met a corresponding number of the Buffalo Whist Club, and made them realize that they still had much to acquire. The visiting men won forty-seven games, making 472 points, while the local team won thirty-four games and made 370 points.

The third annual ball of the Press C. C. was held last Thursday evening at Music Hall. The stage was beautifully decorated with palms, flowers, wheels flags and club colors and set with the refreshment tables. The balconies and boxes were most elaborately trimmed. Very nearly a thousand people were present, especially noticeable was the fine delegation of wheelmen from the Ramblers B. C., and there were also representatives from all the other clubs.

The Lincoln's Donation Party.

About forty wheelmen attended the donation party of the Lincoln Cycling Club last Saturday evening. The presents were numerous, but were mostly of an edible kind. The Lincoln indoor ball team received a large pan of baked beans, gaily decorated in club colors, which Captain Tilt served to the assembled guests; also a pan of nicely browned English pastry, which being cut into, proved to be composed, under a luscious appearing crust, of cotton batting in which reposed a score of little black doll babies. Cards served to pass away a very enjoyable evening.

In and About Chicago.

Saturday evening is guest night at the Illinois Cycling Club. Everybody who has attended one of these affairs knows what fun is gained.

The Æolus Cycling Club's second reception of the season occurs Dec. 15 at Natatorium Hall. Wednesday evening, Dec. 28, a bonnet and necktie party will be given at the club house.

Wednesday evening last Ben King, the humorist, entertained a very select audience in the pretty hall of the Ravenswood Cycling Club with a repertory of his famous inimitable sketches.

The Oak Park Cycling Club's programme for the balance of the year is very complete: Dec. 14, duplicate whist party; 16, informal party; 21, duplicate whist; 24, stag party; 30, formal party.

The Ladies' Social Circle of the People's church, Dr. Thomas' congregation, gave a New England dinner for charity last week. Among the most attractive tables was one representing the Illinois Cycling

Club, presided over by the Misses Lizzie Young and Katie Chalmers. The table was adorned in the club colors, cardinal and old gold.

A local wheelman, who does not dance, has agreed to take his wife to dances all winter if she will let him go out with the boys on all the Sunday runs next summer. His part of the contract is being kept.

The gentlemen of the Oak Park Cycling Club dined with the ladies of the same organization at the club house last Thursday afternoon. An informal dance followed. The gentlemen come direct from work to these informal dining parties.

Last Wednesday evening Ben King, the humorist, gave a recital to a crowded house at the Ravenswood Cycling Club, whose spacious hall is well adapted to that style of entertainment. The Wednesday previous an informal dance was held, at which over twenty-five couples took part.

Friday, Dec. 23, the Illinois Cycling Club gives a dancing party at Van Buren Hall. As this comes in the midst of

three numbers has been arranged. Lunch will be served from 11 to 12.

The Toronto B. C. has a literary and debating society.

The Rockford (Ill.) C. C. is having a pool tournament.

The Harlem Wheelmen will give a stag reception on Dec. 31.

The annual ball of the Fond du Lac (Wis.) C. C. occurs Tuesday evening next.

The Brooklyn B. C. announces receptions for Thursday and Friday evenings of this week.

The ladies of the Grand Rapids Bicycle Club give a leap year dancing party at the club hall Thursday evening.

The Montauk Wheelmen of Brooklyn, held their first annual entertainment at Avon Hall, Bedford avenue, Thursday night.

Christmas eve an old time stag entertainment and smoker will be given in the club house of the Hudson County Wheelmen.

The Columbus (Ohio) C. C. reopened its club house on Thursday, when Gen. Joseph H. Geiger delivered his talk on "Fools and Follies."

The Metropolitan Association of Cycling Clubs of New York has decided to hold a grand annual theatre party at the Broadway theatre on Jan. 12. The en-

the holiday season an enjoyable time is anticipated. On New Year's eve members only will be admitted to the club house to a smoker and lunch, to see the old year out and the new year in.

There was joy in the camp of the Columbia Wheelmen last week Monday evening when their nine defeated that of the Æolus in the ninth inning of a scheduled game of the Northwest League. It was the first time the two teams had met. Great rivalry existed, as the Columbia Wheelmen organizers withdrew from the Æolus Club two years ago.

The Chicago Cycling Club's handicap pool tournament, which started last week Friday evening, promises to be very exciting. The prizes, the first of which is a gold watch, are three in number. There are fourteen men entered, handicapped as follows: John Tyrrell, 90 (scratch); Bingham, McNeil and Davis, 75; Hodges and Brooks, 70; Elliott, Crittenden, Cameron, Young, Colvin, Wagner, 65; Abbott and Root, 60.

About the Country.

The first annual reception and ball of the Crescent Cycle Club of Detroit is set for Thursday night of this week at Clawson's hall. A programme of twenty

fire house has been secured by the association. The "New South" will be given.

The annual stag of the Bedford Wheelmen, of Brooklyn, is set for this evening at Knickerbocker Hall, 163 Clymer street. There will be music, specialties and boxing.

The St. Louis Cycling Club is now hard at work completing arrangements for a big dramatic entertainment to be given the early part of next month. It will try hard to surpass former efforts, and has already engaged enough professional talent to make sure of the entertainment being a good one.

Declines to Serve.

Editor REFEREE:—Will you kindly give space to my declination of the proposed nomination to the chief centurionship of the Century Road Club. The use of my name was entirely unauthorized. I have no time to devote to the duties of the office, much as I should be pleased to do all in my power for the success of the organization. Very truly yours,

HENRY CROWTHER.

Boston, Dec. 13.

Subscribe for the REFEREE

Services are held in the pretty hall of the Ravenswood cycling club every Sunday afternoon, probably the only case of this kind on record.

The annual election of the Oak Park Cycling Club occurs Dec. 7, when a raffle will also be held, in which thirty prizes will be distributed.

Captain Anderson, the athletic fireman, has charge of the gymnasium class of the Æolus Cycling Club, which meets every Friday evening. Twenty-eight men are being put through a thorough course of gymnastic training.

Those Sunday tramps inaugurated by the Lincoln Cycling Club last winter, will be continued this season, no matter what the condition of the weather. Much amusement and a great deal of exercise can be gained in this way.

A majority of the offices in the Royal League and National Union lodges of Ravenswood are held by members of the Ravenswood Cycling Club. Ever since the club's inception it has led in a social way in the town, and now leads in pretty nearly everything.

The Illinois Cycling Club has placed the following ticket in nomination for the election, which occurs on the first Tuesday of next year: President, True L. Sloan; vice-president, C. R. Street; secretary, George Kurtz; treasurer, C. S. Stein; captain, C. P. Smith, Ed. Bamberger; directors, E. G. Richardson, E. M. Baine and Edward Porter.

Joe D. Guinea, the purveying owl of the Midnight Wheelmen, has agreed to arrange for a grand spread on New Year's eve for those who attend the annual run from the old year into the new. Weather will make no difference, and all are welcome. Name and address should be sent at once to either the chief owl or purveying owl, care of the Lincoln Cycling Club, No. 1 Ogden Front, that arrangements may be made.

The Æolus Cycling Club nominations for the annual election, which occurs Jan. 4, are as follows: President, Harry J. Foot; vice-president, A. W. Roth; corresponding secretary, T. J. Swenie; financial secretary, H. J. Freeman; treasurer, C. P. Kenning, C. P. Dose; librarian, W. D. Keats; captain, F. Bodach, W. Bray; second lieutenant, Will Bodach; color bearer, J. D. Roth; directors, four to be elected; H. G. Keats, W. F. Wilk, Dave Wilson, E. Mohr, W. E. Bond, John Clancy, C. E. Crozet, C. W. Peters, C. Bodach, Jr. The Æolus club has 236 members.

Notes.

The Rovers B. C., of North Tonawanda, N. Y., has nominated the following officials: For president, W. F. Davis, Will Hardleben; for vice president, H. S. Sohnsen, Will Ackerman; for secretary, E. C. Koenig, Will Gardel; for treasurer, John Dick; for captain, W. C. Hubman, Charles Treat; for lieutenant, Phil Rumbold, George Zimmerman; color bearer, Edward Hardleben, H. Schwinger.

Prof. L. M. Haupt, of Philadelphia, and C. Heimberger & Son of New Albany, Ind., have been awarded the first two prizes for the best pictures in the bad roads competition organized by Good Roads. N. McDonald, of Augusta, Ill., was awarded the third prize, and several others were allowed honorable mention. The journal offers another \$100 for prizes for photographs of good or bad roads.

RECENT ENGLISH INVENTIONS.

New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Nov. 2, give notice in the prescribed form of such opposition.]

No. 20,628. W. G. Bradley's "Improved handle for velocipedes and other purposes." Nov. 27, 1891.—The objects of this invention are to provide a durable, cheap and serviceable handle which shall not cause any vibration to the hand.

The handle is preferably formed of vulcanized India rubber and has corrugations or recesses (a) formed on the outside thereof and longitudinally therewith the entire length of the handle is perforated with small holes (b) parallel with such corrugations, having at their outer ends metallic protecting eyes (c). Small holes (d) are then formed, passing from the outside of the handle into the small holes (b) before mentioned. As a modification the central hole may be made a little larger than the diameter of the handle-bar, and rings are formed at each end to fit the handle-bar.

No. 21,450. A. Decourdemanche's "Improvements in pneumatic tires and in means for securing the same to the rims of wheels." Dec 9, 1891.—The air tube (a) has formed upon its inner circumference a rib (b) of much harder

India-rubber, extending completely round the tire either continuously or with intervening spaces and having the form in transverse section of a more or less acute wedge. The outer cover (c) is thickened at the tread and is strengthened with one or more thicknesses of canvas (f), preferably formed with

double edges. The edges (g g') of the outer cover are made of hard India-rubber, are enlarged and made of such shape that their inner sides fit closely against the sides of the rib (b) while their outer sides fit into angular recesses (d d') formed in the sides of the rim (e). The pressure of the air jams the parts tight and consequently, the tire must be deflated when it is desired to attach or detach it.

No. 17,264. H. H. Lake's "Improvements relating to the improving of elastic tires and to devices for use therein." Sept. 27, 1892.—(Communicated by the Boston Woven Hose and Rubber Company, Boston, U. S. A.)—The object of this invention is to enable a small puncture in a pneumatic tire to be quickly and durably closed, and in such a manner that there will be no protuberance on the external surface of the tire and no liability of the re-opening of the puncture by the action of solar heat. Punctures are closed by injecting a plug

(p) composed of a material rendered plastic and adhesive by a degree of heat considerably exceeding that caused by the sun, but which becomes elastic without being plastic when exposed to maximum degrees of solar heat. A suitable material is unvulcanized rubber gum. The plug may be injected by heating the gum in a cylinder (s) having a nozzle (sl) formed to be inserted in the puncture. The piston (b) moves in the cylinder (s), and when moved toward the nozzle is adapted to eject a portion of the gum through the said nozzle. The stem (b) is screw threaded and provided with a nut (c), which is formed at its inner end to slide in the cylinder, and is provided with a shoulder (c2). The levers (ds) are pivoted at (dl dl') to ears on the cylinder (s), and are provided with short arms (d2), which engage with the shoulder (c), so that when the levers are swung

toward the nozzle, the piston (b) is brought to bear on the gum by screwing it down by the nut (c). The nozzle is inserted a sufficient distance into the puncture, and then the hot gum is caused to exude in the form of a plug (p) into the puncture, the nozzle being withdrawn during the operation, so that the plug entirely fills the puncture and the material of the plug is cut off about flush with the external surface of the tire. The condition of the plug when injected causes it to adhere closely to the walls of the fracture. The plug subsequently hardens sufficiently to resist the air pressure. The inwardly projecting end of the plug is preferably flattened against the inner surface of the tire, thus forming a head on the inner end of the plug. This may be done by pressing the tire flat while the plug is plastic.

More Mention.

The New Jersey Division, L. A. W., has elected the following officers: Chief consul, G. Carleton Brown; vice-consul, W. T. Holmes; secretary and treasurer, George C. Hennell; representatives, T. S. Gray, W. H. Stauffer, W. A. Drabble, H. C. Leavitt, F. W. Cramer, H. S. Fuller, J. H. Hanners, T. F. Merselles, J. S. Holmes, Jr., C. S. Mathewson, F. G. Wisse, C. B. Holmes, F. L. Martin, Joseph McDermott, James C. Doughty, E. T. Davis and F. C. Pennett.

The Baltimore Cycle Club's new officers are as follows: President, J. A. Arnold; vice-president, M. R. Mettee; secretary, Charles H. Meakin; treasurer, H. W. Barrington; captain, Joseph E. Gigan; first lieutenant, W. H. Jackson; executive committee, A. L. Cline, J. L. Cochran, Charles E. Laws.

George K. Barrett of the Marble Cycle Company is expected home from his eastern trip this week. The orders taken have been very satisfactory to the firm.

toward each other the short arms exert a powerful pressure upon the shoulder (c2) of the nut in the direction required to force the piston a short dis-

"IMPERIAL" HISTORY

—SIXTH CHAPTER.—

THE CLOSE—

Of the past season witnessed the finishing touches put on the latest addition to our already large plant. The rapidly increasing demand for "IMPERIAL" wheels had forced us to patch on hurriedly addition after addition to our factories. We did our level best to increase our manufacturing facilities sufficiently to keep pace with the demand for "IMPERIAL" wheels. Our experience of the past season in positively being obliged to refuse all large orders taken after the 15th of March in order that we might take better care of the earlier trade, has determined us to increase our facilities for '93 FIVE FOLD.

Our 1892 output was well up in the thousands, and our experience in having MORE ORDERS than wheels, speaks volumes for the merit of the "IMPERIAL." We have just finished the construction of an immense seven story structure opposite our present factories. This building has been crowded full of the finest special machinery manned by hundreds of the best mechanics to be obtained. We are now in better position to handle the trade than ever, and most respectfully invite correspondence from representative dealers throughout the United States relative to "IMPERIAL" territory for the coming season.

There are many bicycles on the market to-day; how many GOOD ones you know fully as well as we. The BEST are always the BEST sellers, the most satisfactory for dealer and rider. "IMPERIAL" wheels are lasting; they will double your trade; they can't help it, they are built that way. Don't delay, delays are dangerous, but correspond with us at once.

ORDER CHRISTMAS NUMBERS.

The Christmas number of the REFEREE will contain much valuable information to the trade and general cycling public. The trade directory alone is worth the price, twenty-five cents per copy. Those who are not regular subscribers or advertisers should order immediately (enclosing the amount named) in order that prompt delivery may be made.

TRADE IN NEW ENGLAND.

A Referee Man Visits the Principal Makers and Their Shops.

A cycle journal representative has much to look after among the Boston trade people, for every "inducer" has a fairy tale to tell of "the immense sales last year and the bright prospects for '93," which makes time fly, and it generally flies too rapidly if the tales are very long.

After a good night's sleep on the Fall River Line boat from New York, we reach Boston feeling ready to grapple with all "inducers" and do a good day's work, but after the first two or three grapples you look at your watch and feel that the day sped all too quickly, and the injunction to "work, for the night is

coming, when man's work is done," seems too true.

WILLIAM READ & SONS.

Major Billy Atwell, of William Read & Sons, will greet you warmly and tell you the latest about New Mails and the Easy Club, of which he is president. The major will then switch off to general gossip and tell you that he has reformed and is now a model for all young men to copy. You leave him with a certain amount of incredulity regarding the last statement. Senator Read was away in the west, and while all was ready for '93 the firm was not ready to say anything definite regarding New Mails for '93.

THE McCUNE CYCLE COMPANY.

You take an electric car (this for the benefit of advertising canvassers of other papers), and in twenty minutes arrive at Everett, which is about eight miles from Boston proper. You walk down the railroad track for a mile and come to the McCune factory. You will be impressed with the looks of the factory from the exterior, and feel appearances are not always deceptive after getting inside, and receiving a warm greeting from President J. B. McCune. W. E. McCune, the secretary and treasurer, was away when the REFEREE man called, and the father (J. B.) piloted the visitor around. You will be told, and truthfully, too, that the entire output for '93 is sold, and if you are particularly well known to the firm it will show documentary proof—"just to show we are not talking through our head covering." Having

sold all the '93 output, they don't need to advertise (this also for the benefit of canvassers of other papers).

THE RAYMOND CYCLE COMPANY.

This firm is known all over America, through its famous skates, and is still making 300 pairs a day for Europe and India. The Raymond company saw a chance to increase its popularity by making bicycles, so that in case Europe goes back on roller skating, as America did, bicycle making will fill the void. It commences, like most new concerns, with a claim to some radical innovations, and a saddle post air pump, the post being used as a plunger, which forces air through the cross rod of the frame, to which a valve is attached, and a piece of rubber tubing with proper attachments is connected with the tire. "We claim that it does away with the pump, saves men and women many a backache by avoiding stooping to pump—and you can inflate the tires in a fraction of the time now consumed by use of the little blowers." The whole thing looks possible and practical. The new-thing crank will want 'em; so will some others, no doubt.

THE LOVELL ARMS COMPANY.

The John P. Lovell Arms Company is busy—not particularly with '93 wheel business, but in other heavy sporting goods and toy lines. Manager Harvey of the cycling department, however, is busy laying wires for '93, and presented the REFEREE man with something which appears in this issue, about the Lovell wheels. Mr. Harvey, like all true philosophers, has at last come down to the true Humber frame, and a pretty wheel it is, too. It will be seen at the show.

THE UNION CYCLE COMPANY.

Treasurer Walter Measure was a much sought-for man when this paper's representative reached Columbus avenue. A

delegation of "the people's party," several agents, drummers, and newspaper men besieged the Union office. "There is nothing new to say," was the answer I got to an enquiry regarding '93 prospects; "but"—and W. M. smiled—"they will all think P. D. Q. that we will be fairly among the scratch men this year as usual. Will see you at Philadelphia."

THE POPE MANUFACTURING COMPANY.

The marble front block looked a bit deserted and quiet reigned inside. Lon Peck and Kirk Corey told a few stories, while Albert Pope, Jr., talked of his hunting trip and its barren results, and a story of an interesting nature—of matrimonial intentions nipped in the bud by a fond but stern Pope. The colonel was up to his ears in work, bidding farewell to many business cares, as he started on a long pleasure trip the day following. The prospects for '93 were never better, was the opinion of all the Pope Manufacturing Company's staff.

GENERAL BOSTON NOTES.

W. C. Overman was on the road, V. Dagmore was in Europe, Underwood was guardian angel of Priest, Jr., of Quadrant fame, and A. O. Very was getting ready to boom Liberties and Warwicks in New England. George Seymour was making room for a large machine shop in the Coventry Machinists' Company's basement, and Sidwell & Sabin are pretty well, thank you, and hope to do as well with the Phoenix next year as they did last. W. W. Stall showed a 27-pound roadster, built in his own shop, which will list at \$175. The Singer Cycle Company is quiet, and awaits Manager Ross' return from Europe. The Elastic Tip Company is making tires and sundries, and the Revere Rubber Company, over whose tire department Stillman G. Whittaker presides, is making

ANNOUNCEMENT.

We are glad to be able to say to our patrons that we have already recovered from the effects of our small fire, and can now receive our friends in our new offices. We have been engaged for two months past, with a large force of men, in remodeling our entire factory, putting in a large amount of new machinery, which is now ready for operation. Our capacity will be double that of 1892. We learn that some of our competitors are circulating reports to the effect that we were entirely burned out, thus hoping to injure our business. This anxiety to marry our widow for the money there is in it, before we are cold, is enterprising, indeed, and we presume the said competitors are congratulating themselves on a rich haul. Wait a bit, boys. Western people don't die so easily.

Attention, Road Riders: PRIZES FOR THE SEASON OF 1892. PRIZES CLOSE CHRISTMAS DAY. . . .

As we have given many **PRIZES** for track and road races during the past season, it seems only fair now that Christmas is approaching to offer something for the hard-pounded road riders. If this experiment succeeds we will make a desirable list for 1893, which will be announced later on.

pneumatic tires and all kinds of rubber specialties for the trade. The Boston Tire Company is putting a really good tire of the Boothroyd type on the market, an invention of Frederick White. P. J. Berlo is cavorting around Columbus avenue on his 17-pound Berlo racer, and C. E. Schoff and Jack Holding are hoping for a good '93 trade.

Hunt, the Westboro saddle maker, is very well satisfied with trade so far, and is showing (and selling) a lot of nice saddles. Reed & Curtis, Worcester, are in their new building and turning out the Curtis pedal at the rate of 250 pairs a day.

PROVIDENCE, R. I.

In Providence the Tillinghast pneumatic Tire Company was found to be very busy and orders are commencing to float in from many directions. President George C. Vose says the Tillinghast tire will be as good as can be made, and its durability will be the great feature. The new factory is in full blast, and Mr. Vose is on the ground himself a good deal of the time. Between his wholesale jewelry business, assignee of a big concern in Providence, and the tire business, Mr. Vose says he has little time to crack walnuts after dinner.

Belcher & Loomis are getting in shape for next season's business, and expect to sell many wheels and do a good general business. Mr. Monroe, the cycle department man, had not put in an appearance at the early hour the REFEREE man called.

Rankin & Bruce have extended their large workshop and are doing quite a business in pneumatic and cushioned sulky wheels, besides a very fair general cycle and sundry trade for this time of the year.

Neither member of the firm of Whitten and Godding could be seen, but the

young man in charge said that trade was improving.

Campbell & Co. said things promised well for '93. They will make a specialty of their special built scorchier Phantom cycle and handle their usual full line of other cycles and sundries.

SPRINGFIELD, CHICOPEE AND HOLYOKE.

At Holyoke General Manager Keating was found hard at work; so was Capt. Murphy, who was hidden in a developing room, developing pictures of the factory and the men who will ride the Keating next year. A '93 wheel, twenty-seven pounds all on, was suspended in the salesroom by thin, almost invisible, copper wire. Treasurer Bosworth was in New York. Tommy Relph, one of the "pures," was in the stock room earning the same salary he gets the year round. This he told the REFEREE man through a speaking tube, and it cannot be taken as criminating evidence by the racing board.

The Warwick company was not "at home"—that is, Kennedy-Child and President Rood were away—But T. D. Howard received the traveler. "The same old story we expect to be repeated," said Mr. Howard, "and that is, a shower of telegram orders about Feb. 1. But not many before—that is, to ship—and they all will want them at twenty-four hours' notice, so we are getting ready for them, and are working full time right along.

"Come up to my residence to-night," telephoned President A. H. Overman from Chicopee Falls. By the moon's aid and an arc light the REFEREE man took in the outside of the big architectural place on the hill, which is handsome to a degree. The style is of the old Colonial, and a view all over Springfield can be had from any portion of it. The bell was answered by a pretty maid,

who showed the visitor into the reception room and presented his card to Mr. Overman, who sent word that he would be down in a minute. While awaiting Mr. Overman the splendor of the inside was duly noted. A magnificent library of new volumes, of Shakespeare, Burns, Byron, Memoirs of Napoleon, Dickens, Encyclopedias galore, histories of England and America, and other works which proved the owner of the house as an expert on the quality of literature, and scattered around were three well marked and thumbled bibles—the foundation of all literature, it has been said. Electric lights and call bells extend through the house, and the rooms are finished in old oak. While in the midst of "sizing up" the place, Mr. Overman appeared, looking in vigorous health, and greeted the REFEREE representative kindly.

Then Mr. Overman spoke of his European trip, and the delightful time he spent at Schevoigan, Holland, and as the writer had spent nearly a month there among the pleasant and interesting Dutch people, conversation did not lag. Mr. Overman said he was never in more robust health, and prospects of the company never better. We then talked business, and Mr. Overman said he was to leave the following night for Chicago. When giving men credit for actual work performed and a battle well won, don't forget to include A. H. Overman, of Chicopee Falls, in your category.

HARTFORD, CONN.

A visit was made to the League Cycle Factory. Mr. Gladwin, the well-known broker, who is secretary and treasurer of the concern, said: "Yes, we are going ahead, and two wheels are nearly ready. We have a large factory engaged and will increase our force daily from now on, although we are not ex-

actly ready for business. From what some of the best mechanics in bicycle making and some of Hartford's best riders say, we have undoubtedly hit on the right thing in our chainless wheel. We have plenty of capital and will be heard from pretty strongly in a short time."

David J. Post, secretary and treasurer of the Hartford Cycle Company, says 1893 will be a great year for Hartfords, and even now it looks as if the story of '92 will be repeated—not enough wheels to satisfy the demand. There is no doubt that the Hartford was the popular medium-priced wheel last year.

A. M. Stillman is getting ready to boom his upright oil can holder, and works during the day in the Hartford Screw Works.

NEW BRITAIN AND BRISTOL.

At the former place I had an interesting talk with George Corbin, Jr., of the great Corbin Cabinet Lock Company. Mr. Corbin is an old-time ordinary rider, and recalls with interest many interesting and exciting incidents of the pioneer days of cycling in America. Mr. Corbin will shortly place on the market two bicycle locks. This firm can compete in quality and price with the best.

The New Britain Hardware Company, through Manager Wilbur, always greets a visitor cordially. A trip through the factory, where expensive machinery turns out everything in the way of parts with a thread on, was made.

A pleasant evening in the company of Harry Arnold, the crack Nutmeg State racer, and a look through his place, where he is building the Windle bicycle, called so after his bosom friend of Milbury, brought another day to a close. Mr. Arnold's wheel looks like the Relay Columbia, but has a larger head, and looks like a goer. Mr. Arnold may build a hundred, then again, he may

Can I Repair My Pneumatic Tire?

That is what it comes to finally with the rider—he wants to
know if he can repair easily and quickly.

CHICAGO, Nov. 29, 1892.

EDITOR THE REFEREE:

DEAR SIR:—Please insert the following trade note in your next issue, and oblige,

Yours truly, GEO. K. BARRETT, For Marble Cycle Mfg. Co.

The well-known and popular cyclist, Col. Geo. K. Barrett, is having great success in selling the Celebrated Smalley Cycles. They are absolutely the finest thing we have yet seen in cycles—light, strong and graceful. The factory, at Plymouth, Ind., is the most completely equipped one on either side the Atlantic. We recommend our readers to write to the genial Barrett, at the Company's wholesale and retail depot, 271 Wabash Ave., Chicago.

start a stock company and build many, as he owns an entire brick building, the upper floors of which he uses as a factory.

At Bristol I found the New Departure Bell Company, and it was busy. Mr. Rockwell, the superintendent, who is responsible for the many clever bell productions, personally conducted me through his factory. The latest New Departure shows a neat looking double electric alarm, with lock clamp and key. This is a new idea and certainly a taking one. Mr. Rockwell had been laboring with a new idea in pneumatic tires the past few months in his spare moments, when he found a man in England exhibited the very same thing at the Stanley show.

EAST HAMPTON, CONN.

This place should be called Belltown, for out of the seven factories in the place of 3,000 people, five of the factories make bells. In this issue Starr Brothers Bell Manufacturing Company announces its ability and willingness to supply bell music to the thousands. One can get anything from a bell the size of St. Paul's to the tiniest sleigh bell. In bicycle bells they have four kinds. They show in this issue an open base of the cheaper variety, and will illustrate four more in their quarter-page "ad" next week.

Bevin Brothers is another big concern

in East Hampton, and, like all the other people, are courteous to the stranger. The Messrs. Bevin have been noticed in these columns before.

The American Gong Company, over whose destinies Mr. Clark presides, advertises five new styles of bells. The concern is reaching out in vigorous style for the bell trade. This house may have an exhibit at the Philadelphia show. The two other concerns make all other kinds of bells but bicycle bells.

NEW HAVEN, CONN.

The New Haven Metal Company is now making a neat-looking saddle, entirely different in construction from anything yet on the market. It is called the Best. Mr. Morgan, the manager, claim it is the only saddle that gives perfect downward and backward motion.

The Yale Cyclometer Company has sold its really useful article to Whitten & Godding, which firm, by the way, seems to be gobbling up many good specialties.

The Barnes Tool Company reports orders for its wrenches as fair.

Pomeroy Brothers are doing a nice business with their oilers, nipples and other specialties. Their oiler is having a wide sale.

BIRMINGHAM, CONN.

Wilcox & Howe feel elated because orders for their drop forgings have come from far-off Chicago, G. & J. being the

latest to patronize them. Many other concerns, including the McCune Cycle Company, have given pretty large orders for the Wilcox & Howe forgings. Mr. Howe and the firm are well spoken of all over, whilst at home it is a tower of strength.

TORRINGTON, CONN.

Here the Eagle bird is hatched, and although early in calling, the secretary and superintendent were around. The REFEREE man was shown a '93 road racer, which Superintendent Gaylor was just taking to the photographers. It is strong and of graceful lines, and as the superintendent jumped on the crank the frame remained perfectly rigid. It is as pretty and strong-looking as any wheel seen this year. The roadster is a solid yet light wheel. The Eagle Bicycle Manufacturing Company means to be ready in time this year.

Another Hartford Factory.

The League Cycle Company, capital stock \$100,000, is the title of a new corporation organized at Hartford, Conn., last week Tuesday. The officers are: Gen. Henry C. Dwight, president; R. S. Gladwin, secretary and treasurer; L. A. Corbin, Henry C. Dwight, E. G. Parkhurst, C. H. Cooley, E. J. O'Connor, R. S. Gladwin, P. H. Billings, Leander Hall, and R. P. Chapman, directors. No vice-president was elected. The new con-

cern proposes to manufacture a new chainless wheel, patents for which were secured by E. J. O'Connor, of Provi-

dence, last September. Two wheels constructed according to his designs have been in long and successful use. One was ridden for 3,000 miles and the other 2,500, and they have, it is believed, shown the thorough practicability and excellent wearing qualities of the new machine. The power is transmitted from the crank shaft by a large beveled gear wheel to the end of the connecting shaft, which turns on balls inside the rear fork tube. From this the power is transmitted to the rear wheel by a pair of beveled gears at the rear of the rear axle. Many orders for the new wheel have already been received and a factory will be secured at once. The old building of the Hartford Cycle Company has been looked at and will likely be secured.

A Bicycle Canopy.

John S. Barnes, of Detroit, has brought out a neat little article which

ought to prove a blessing to the tourist and those who desire to ride in the sun. It is nothing more or less than a bicycle umbrella, called a canopy, and is made by the Bicycle Canopy Company, of Detroit. We show in a group of illustrations the many uses to which the little article may be put. The pictures are from drawings made from photographs.

The canopy is suited to all wheels, conditions, position of the sun, direction of wind, size of riders, etc., easily adjusted, light in weight, easily folded and put entirely out of the way when not needed as a sun shade, in which position it becomes a handy package carrier. The canopy is nearly flat when open, and pointed in front, from which fact the wind has little or no effect on it.

Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

487,419, india rubber tire; Henry N.

Lee, London, England; filed Jan. 12, 1892; serial No. 417,833. Patented in England June 27, 1891; in Belgium Jan. 4, 1892, and in France Jan. 4, 1892.

487,473, bicycle stand; George S. Crosby, Buffalo, N. Y., assignor to Pratt & Letchworth, same place; filed July 7, 1892; serial No. 439,309.

487,522, pneumatic tire; William Golding, Manchester, England; assignor to Charles Macintosh & Co., Ltd., same place; filed Sept. 18, 1891, serial No. 406,051. Patented in England Feb. 21, 1891.

487,577, bicycle attachment; Allen Marthens, Pittsburg, Pa.; filed June 21, 1892; serial No. 437,482.

487,596, bicycle tire; George R. Bassett, New York; filed March 7, 1892; serial No. 424,036.

487,669, pneumatic tire; Walter B. Hardy, Boston, Mass., assignor to the Revere Rubber Company, same place; filed July 9, 1892; Serial No. 439,451.

The Morgan & Wright Fire.

The fire at the Morgan & Wright tire factory harmed the concern's business comparatively little. None of the machinery was seriously damaged and the engines were started within twenty-four hours after the fire. The new three-story building recently erected was not injured, and the old building on the corner of May and Lake streets had only the windows broken out. These were at once replaced and the damage by water quickly remedied. On Saturday the manufacture of tires was resumed and early the present week a full force was put on night and day to make up the few days lost. By push and energy this hustling firm has overcome what to some would have been an irreparable loss at this season. They deserve success.

Enlarging the Lozier Plant.

A rumor was about last week to the effect that the plant of H. A. Lozier & Co., Cleveland, has been purchased by

the Studebaker Brothers Manufacturing Company, of South Bend, Ind., who would move the same to that city. Word comes from South Bend that the Lozier people have had a conference with the Studebakers relative to the purchase or capitalization of the concern, but the latter have refused to accept the terms and the matter has been dropped. This was all there was to it. The Lozier plant at Cincinnati will be greatly enlarged and building will begin very shortly.

Bright Idea, This.

A Cleveland paper tells of a clever scheme and one which cannot fail to work with success: It has been announced that a number of English bicycle manufacturers propose to open agencies in New York city and Chicago from now up to the time the World's Fair is opened. They very shrewdly propose to import a large number of wheels under the law which permits exhibits at the fair to come in without payment of customs duty. If the wheels are sold all well and good, then the duty will be paid, but if they are not, then they will be shipped back to England. It is said,

few days. They will show samples of these wheels at stand No. 31, Philadelphia cycle show.

Chicago Trade Notes.

Colonel Albert A. Pope, of Boston, arrived in Chicago early this week.

W. C. Anderson is traveling through Illinois territory for A. G. Spalding & Bros.

P. Cease, of the Eagle Bicycle Manufacturing Company, is at the Great Northern Hotel.

H. W. Jenney, of the old firm of Jenney and Graham, has entered the employ of Thorsen & Cassady.

Harvey and Alf. DuCros arrived in Chicago early this week. The Dunlop tire deal will be closed shortly.

G. W. Cushman has left the employ of the Taylor Cycle Company and returned to his old home in New York city.

The Heywood & Morrell Rattan Company denies the report that it is about to begin the manufacture of bicycles and is to open a retail store. However, a local reporter interviewing the son of one of the proprietors, gained an admission that

He has had no experience in the cycle line, but had charge of the hose department.

W. E. Sanborn, of Codman, Shurtleff & Co., Boston, was in Chicago this week. Mr. Sanborn exhibited something very fine in the way of a floor pump.

Thorsen & Cassady have contracted for a large stock of Warwick Perfection cycles, which they will handle in the territory west of the center line of Michigan and north of Peoria.

Said a prominent local wheelman: "You talk an hour with Stephen Golder and you know him as well as you ever will and can't help liking him." Surely an eloquent testimonial.

Cycle salesmen of ability have no excuse for remaining out of a job nowadays, as it is reported that over fifty good men are wanted by jobbers and manufacturers in the west.

W. E. Newton of W. E. Newton & Co., Portland, Ore., handlers of Imperial cycles, is in the city on business with Ames & Frost. This firm's business covers Oregon and Washington.

George M. Hendee gave up the idea of going west to the Pacific, returning to Chicago from Kansas City. He will return east for Christmas and take the western trip the first of the year.

The Crane Manufacturing Company is bidding with a number of prominent makers for a hundred bicycles for employees. This gave rise to the statement that this great firm would enter the cycle trade next fall.

The Charles F. Stokes Manufacturing Company has placed an order with the Indiana Bicycle Company for medium grade wheels. This lively Chicago concern sold 18,000 of the Indiana company's output last season.

A. Kennedy-Child remained in Chicago just a week and then skipped as quickly as possible. He says Chicago is expensive and he don't like it, anyway. Warwicks will be distributed throughout the west by Thorsen & Cassady.

John Read, the Boston cycle dealer, and manufacturer of the New Mail, is a state senator, having been recently elected. Mr. Read was in Chicago the early part of this week, conferring with A. W. Moore, his western representative.

M. C. Henley, the manager of the Coventry Machinists' Company's American factory, at Richmond, Ind., was in Chicago last week. Mr. Henley achieved fame in the manufacture of rollerskates, used the world over, the Henley being considered the best.

W. H. Masters, of the Demorest Company, of New York, is in the city. This company manufactures the New York safety, which weighs thirty pounds, stripped, and lists at \$125. A Chicago store may be opened as a distributing point for western territory.

Thomas Sanders closed a large deal with Sidwell & Sabin, of Boston, for Æolus parts and British seamless steel tubing. This firm will manufacture a line of wheels. Mr. Sanders is now in Chicago seeking to place a western agency for Æolus wheels.

General Trade Notes.

The REFEREE and all latest cycling papers, periodicals and hand books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—Adv.

Harry C. Tyler is traveling for the Union company.

The Cleveland Rubber Company will have its new tire on the market in a few days.

The manufacturers of the Sunol, the McIntosh-Huntington Company, of Cleveland, O., has a surprise packet in

THE BICYCLE CANOPY.

however, that the prices will be made so tempting that very few will be sent home.

Peoria Trade Affairs.

P. W. Tillinghast, inventor of the Tillinghast pneumatic tire, of Providence, R. I., was in Peoria last Saturday with a sample of his '93 tires.

E. F. Rolle, formerly in the employ of A. Featherstone, will open a large bicycle house at Atlanta, Ga., on Jan. 1. Mr. Rolle was in Peoria last week looking at the different lines of bicycles handled here. He was on his way home from a southern trip, and reports the cycling business in that section in a flourishing condition.

C. W. Mallery, representing the New Departure Bell Company, was in Peoria showing samples of the 1893 New Departure bell.

Stephen Garber, Jr., of the firm of Dinwiddie & Gaddis, Frankfort, Ind., was in Peoria in company with Mr. Dinwiddie, purchasing bicycles for the '93 trade.

Kirkwood, Miller & Co. will receive a large shipment of Telephone cycles in a

there was much truth in the report. This firm is said to have lately built a large addition to its factory.

The Marion Cycle Company will manufacture 1,500 H-T. scorchers this year, of which the company reports 1,070 sold.

W. E. Lee, of Devany, Hopkins & Co., 511 to 515 Stanyan street, San Francisco, was in Chicago Monday, on his way to England.

Harry Leaming has accepted a position as superintendent of the Standard Bicycle Manufacturing Company's plant at Indianapolis.

A. J. Marrett, of the Coventry Machinists' Company, now in England, will sail for America on the first boat that leaves after Christmas.

It is reported of western traveling men that they did well in the west but found poor trade in the east, dealers waiting until after the cycle show.

J. F. Ives, an old resident of Chicago, an employe of A. G. Spalding & Bros., is in Chicago, introducing T. M. Plumb to the western trade of the New York Belting and Packing Company. Mr. Plumb will take the place of Mr. Strauss,

THE REFEREE

For one year. Once a subscriber—always a subscriber.

Dueling on bicycles is reported to be a new diversion in Spain. Two members of the bicycle club of Granada recently met in a knife duel, which is probably the first duel ever fought on wheels. Accompanied by their seconds they wheeled out some distance on the road to Malaga, to a secluded spot. There, posted seven hundred feet apart, at a sign they wheeled for each other, each directing his machine with the left hand, and brandishing in the right that terrible knife of Spain, the navaja. At the first clash Perez pierced the left arm of Moreno, but at the third encounter Moreno thrust his knife into Perez's right breast. In a few minutes the latter died of internal hemorrhage.—Ex.

store for the trade, which it will exhibit at the Philadelphia show.

It is said A. Strauss received a salary of \$20,000 per year from the New York Belting and Packing Company.

The Anglo-American Iron & Metal Company announces something startling in the line of rims, and says "something is going to drop."

So well pleased is the George Worthington Cycle Company, Cleveland, over this year's trade that the company will for '93 largely extend its trade.

The Bingham Company, Cleveland, controls the output for next year of the Hackney Bicycle Company and the Yost Bicycle Manufacturing Company.

The Falconer bicycle factory at Falconer, near Jamestown, N. Y., is nearly completed. The company expects to make a hundred wheels during the winter.

The American Ormonde Cycle Company, which first brought the geared ordinary to the United States, will show a front driver safety at the Philadelphia cycle show.

The capacity of the Freeport Bicycle Manufacturing Company's plant is about 1,200 wheels, orders for nearly all of which have already been received. These will be in three styles, the '92 pattern, the '93 pattern somewhat changed in style from that of '92, and the ladies'. A number of racing ma-

chines will be constructed. This company made the machine on which Johnson established his wonderful record.

The Reform Cycle Company, successor to Flavel & Co., Coventry, has issued a neat little catalogue showing the Reform roadster, light roadster, racer, special Reform and a handsome ladies' wheel.

The New Howe Machine Company will place on the market next season a detachable rubber mud guard weighing only three-quarters of a pound, and easily rolled up so as to put snugly away in the pocket.

At a competition of makers at Rockaway for the sale of wheels to the Oceanus Club, a new organization, the selection was made of eight New York cycles, ten Raymond and two Lovell Diamonds.

Lindsay Brothers, of Milwaukee, are placing on the market a special wheel designed for them called the Lindsay Scorcher. This firm also handles Rudge, Sylph, Overland and Western Wheel Works goods.

The Rudge Cycle Company's new catalogue shows illustrations and descriptions of no less than twenty-three different vehicles, including roadsters, racers, ladies', front drivers, triplets, tricycles, quadricycles and parcel-carrier tricycles.

The McCune Cycle Company, of Everett, Mass., is sending out a neat folder giving the general description, special features and fac-simile of colors of its new wheel, a description of which was published recently in the REFEREE.

Durant McLean, captain of the Kings County Wheelmen, has resutned from a business trip to England. While in London he spent some time at the Stanley show. Mr. McLean will probably open a New York agency for Roulette cycles.

Models of the Tourist are being shown by the George R. Bidwell Cycle Company. The company is now rushing things in its tire department. Rumor says that Mr. Strauss, late of the New York Belting & Packing Company, will join the company.

W. A. Whitmore has left the employ of the Luberg Manufacturing Company to accept a position as manager of the Norman Wheel Company, 2118 West Susquehanna avenue, Philadelphia, which is now engaged in the manufacture of bicycles, with the Union Real Estate Company as guarantor. The machines will be known as Norman "A" and "B" and will be strictly high grade.

THE IDEAL PNEUMATIC TIRE STILL AHEAD.

C—Cover.
I—Inflation Tube.
W—Wire.
R—Rim.

Notice is hereby given that we have secured all rights, under U. S. Patent, No. 466,577, issued to Frederick Schrader, application for which was filed in the U. S. Patent Office, Dec. 30, 1890, which patent contains the following sweeping claim: "The combination of the U shaped tire, the felly, an inflated tube confined by said tire and an internal clamping device, between which and the felly the U shaped tire is secured."

This is the only patent in the United States covering broadly the use of wires or similar devices for securing the outer cover of a pneumatic tire to the rim.

Legal proceedings will shortly be commenced by us against all persons making or using such tires, except those operating under a license from us.

Order no *wired tires* unless the agent can produce a patent for the same, dating back into 1890.

Place your orders early for Ideal Tires, and know for yourself that you are thoroughly protected by patents. Send for circular.

BUFFALO TRICYCLE CO., BUFFALO, N. Y.

THE "LION" ROAD RACER OR SCORCHER.

"The fact that the 'Lion' jumped with a bound into the front rank of racing wheels, proves conclusively that its qualities and pace-producing powers were far in advance of the new makes, and they quickly became, and remain, formidable rivals to the old established firms."—Sport and Play, Nov. 10, '91.

 Broad Street, Birmingham, England.

Responsible American Agents wanted in the Eastern and Western States.
 Apply at once.

WHITWORTH CYCLES . . .

. . . . U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

THE OLDEST AND LARGEST
 Hollow Fork Manufrs. in the World.
 MAKERS OF ALL KINDS OF TUBE WORK.

THE MOST NEWSY CYCLING JOURNAL IN EUROPE.

For really pleasing cycle reading, bright, chatty, and light, commend me to the *Irish Cyclist*. Although it necessarily devotes much of its space to Hibernian affairs, it always contains matter of general interest, while its little stories and anecdotes are well seasoned with Attic salt. Mr. Mecredy would certainly satisfy Carlyle's requirement in "able editing," the whole paper is stamped with his pleasant imprint.—*The People*, London.

The ablest edited and most newsy cycle journal in Europe.—*Sporting Times*, New York.

One of the smartest and liveliest of cycling papers.—*National Press*.

Mr. Mecredy's admirable cycling journal has pushed its way by sheer merit and enterprise into the very front rank of sporting papers.—*Freeman's Journal*.

The best paper in its peculiar line published.—*Irish Society*.

Its literary fare is still as bright and interesting as ever.—*Cycling*.

Although some of our English cycle journals are reckoned pretty smart, they cannot beat it.—*Hull Daily News*.

Matter which from beginning to end is thoroughly interesting, not only to Irish riders but also to English wheelmen.—*Liverpool Athletic and Dramatic News*.

The most interesting of wheel papers.—*Cricket and Football Field*.

A credit to the country.—*Belfast Morning News*.

An admirable miscellany of everything interesting to cyclists.—*Weekly Irish Times*.

Specimen Copy, post free, from **MECREDY & KYLE, 49 Middle Abbey St., Dublin.**

Niagara Machine Co
 BUFFALO, N. Y.

OUR GOODS ARE IN USE FROM SAN FRANCISCO TO ST. PETERSBURG.

NO MORE WALKING.

Our '93 Protection Strip Tire

When punctured closes itself in most cases ; if not, an ordinary puncture can be repaired on the road in a few minutes, without taking the tire from the rim or removing the protection strip, by means of inserting

OUR UMBRELLA PATCH.

A large cut can be made absolutely air tight by removing the protection strip and crowding some soft material in the cut moistened with rubber solution. Wrap it with special tire tape around the cut and replace the strip.

Our Improved Valve Is Perfect.

To Riders: Our '93 P. S. tire is as light and lively as any other in the market, and can be repaired by the roadside by any one in a few minutes. Any other tire must be removed from the wheel to be permanently repaired.

This cut represents the well-known inner tube tire laced on the under side, which we have greatly improved.

NEW YORK BELTING & PACKING CO., Ltd.

15 PARK ROW NEW YORK.

Correspondence Solicited.

W. D. ALLEN & CO., Western Agents, 151 Lake Street, CHICAGO.

Yes, 1893 Is Coming!

And We Are Progressing With the Days.

Was your last year's wheel satisfactory?

No! Then it was not a "QUADRANT."

Is your next wheel going to be satisfactory?

Make Sure, Doubly Sure, by riding a "QUADRANT."

Fitness; yes, ride a wheel that fits you; but this is only one phase of the eternal fitness story.

**Be One of the Modern Braves:
"Man-Not-Afraid-of-His-Mount."**

Ride a wheel that permits you to rest easy upon it and one that rests easy on your mind.

Know the truth. Investigate, weigh, turn over these facts and act accordingly.

QUADRANTS are reliable, guaranteed, strong in every part, handsome and finished in every detail. Remember, don't speculate in experiments. QUADRANTS are built to suit all sorts and conditions of men, not forgetting ladies.

Buy of the makers who **have** a **name**, not those who have yet to make one. Buy of manufacturers direct or their responsible representatives.

A broad hint to Agents. Do you want to handle the product of the best makers of the world? Do you want to handle cycles that are not everlastingly on your hands or in your shop for repairs? If so, write to the Wholesale and Retail Depots of the

"Imperial" COUPLETS

REGISTERED TRADE MARK

== FOR 1893. ==

"Imperial" REGISTERED TRADE MARK	Wheels. . .	{ They will be the best to ride and the best to sell. They are built in five styles, and for use on either road or track. They are abreast with the times.
"Imperial" REGISTERED TRADE MARK	Material. . .	{ The choicest, of course. Leave cheap unknowns for other chaps to try; they are risky. "Imperials" are safe; everyone knows that. Ask "Imperial" riders.
"Imperial" REGISTERED TRADE MARK	Bearings. .	{ Perfect in design, make and finish; marvelously easy running; simple and lasting adjustments; absolutely dust proof and oil retaining.
"Imperial" REGISTERED TRADE MARK	Steering. . .	{ So easy; "Imperials" are famous for this. A week's acquaintance with one will enable you to ride it anywhere, "hands off." The lines are perfect.
"Imperial" REGISTERED TRADE MARK	Cranks. . .	{ Light, handsome and immensely strong; quite in keeping with "Imperial" construction. They are round and practically unbreakable. We are proud of them.
"Imperial" REGISTERED TRADE MARK	Frame. . . .	{ Widely copied. No other, however, possessing as many virtues. Unequaled in its great strength, its light weight and unusual beauty.
"Imperial" REGISTERED TRADE MARK	Finish. . .	{ With "Imperials" good looks and good qualities go hand in hand. They are stylish, handsome, exquisite. Our 1893 catalogue treats fully on this subject.
"Imperial" REGISTERED TRADE MARK	Fittings. . .	{ Saddles, tool bags and the general equipment will embody many new, novel and catchy ideas. They will be modern and surprise you with their excellence.
"Imperial" REGISTERED TRADE MARK	Value. . .	{ "Imperial" is the name of a line of Standard High Grand bicycles, and can be obtained only through regular channels. You take no chances on an "Imperial."
"Imperial" REGISTERED TRADE MARK	Advertising..	{ As usual, we will spend lots of money for advertising. We want to be thoroughly acquainted, and let the world know how good "Imperials" are. We will ALWAYS talk about bicycles and their accessories.

"Imperial" 1893 PNEUMATIC.

REGISTERED TRADE MARK

== OUR OWN SPECIAL TIRE IS CAPTURING ALL. ==

Simple, Lively, Durable, No Complication, No Clinch, No Rags, Joy,
THE ONLY SAFE, DEPENDABLE PNEUMATIC.

Be Certain----**"Imperial"** Wheels----Will Lead.

REGISTERED TRADE MARK

NOTE THIS ESPECIALLY:—Two-thirds of our 1893 output have been contracted for already. Early last March we quit taking large orders. Don't get in late again. Nearly all regular "Imperial" dealers have been heard from. If you have not sold "Imperials" get on our list quickly. Competition has no terror for the "Imperial" agent. Protect yourself—sell "Imperials."

OUR CATALOGUE is well worth having. Send for it. It's yours for the asking.

To Athletes, Cyclists, Baseball and Footballists.
Horse-back Riders, Boxers and Oarsmen—
When you want to ride, run, walk, row, skate
swim a long distance, USE

ANTI-STIFF

TO STRENGTHEN THE MUSCLES.

TO STRENGTHEN THE MUSCLES.

It is a marvelous preparation for Strengthening the Muscular System. With Anti-Stiff there is no faith required; it goes straight for the muscles, and you can feel it at work. It has a peculiarly warming, comforting and stimulating effect on all weak or stiff muscles or sinews. Quick in its action, cleanly and pleasant in use. Rub it into the muscles every night for a fortnight and you will be pleased at its supporting and strengthening properties. There is not, nor has been, anything like it till now. It differs from all Oils, Embrocations and Liniments, both in substance and effect. Some Athletes are so fond of it that they rub it all over them.

Price, 20c. and 35c. per box.

Trainer's Size, \$1.00.

1893=====HUMBER=====1893

We are Ready for the '93 Campaign. Agencies should be applied for At Once.

Material, Workmanship, Design and Finish ABSOLUTELY THE BEST.

There is no other Light Wheel made that will stand with the HUMBER. They weigh, as advertised, "All On."

We are sole agents for Humber & Co., Ltd., for the following territory: Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware and Ohio north of Columbus, District of Columbia, Virginia, West Virginia, North and South Carolina, Georgia and Florida.

SCHOVERLING, DALY & GALES, 302 Broadway, NEW YORK.

IN the latter end of '91 the Standard Manufacturing Company of Indianapolis, Ind., brought out a wheel that many years' of wheel manufacturing and use convinced them to be the most desirable, and, having many new and interesting features, it had a phenomenal introduction, and, for the reason of its successful road and track events, has been crowned as one of the first, and, with the modifications that a forecast of '93 demands, dictated its successful destiny may be plainly foretold. The position of the saddle, handle bar and the weight of the mount have been met to perfection. The coming of the

1893 PLANET

May be viewed soon by keeping an eye on this space. It will cut a wide swath, and many will be struck with it. The numerous track and road events it has captured, stamp it as NUMBER ONE. Secure territory early. Advance sheets out soon. '93 catalogue by January 15. Write.

"Wheels and Wheeling"

AN INDISPENSABLE HANDBOOK FOR CYCLISTS,

By LUTHER H. POTTER, author of "Cycling for Health and Pleasure."

400 Pages. 216 Illustrations.

This book is a companion volume to "Cycling for Health and Pleasure," which met with great success, but contains nearly twice as much matter. It is crowded with interesting and curious information. Beside treating of Cycling in the United States, the U. A. W., Macadam Roads, and many other topics, it deals exhaustively with Pneumatic and Cushion Tires, giving illustrations of over sixty varieties, and describing in detail their construction and care.

This Information is Collected Nowhere Else.

PRICE, - 75c., POST PAID.

WHEELMAN CO., Publishers, 12 Pearl Street, BOSTON, MASS.

CHRISTMAS GREETING.

What manner of man is he, pray, who does not on the annual recurrence of Christmas feel some touch of those sentiments which are generally supposed to animate the whole human family at this period? None such, we hope sincerely, and doubtless not vainly, are to be reckoned among those people whose eyes may rest upon this page, for certainly in no business greater good nature and jollity prevails than in cycling. These characteristics are, we are sometimes told, too prominent, but that is a question we can ill afford to deliberate over at Christmas.

Great changes have come upon us since the last glad Christmas time. On that occasion we ventured to hope that none among us might, in the year to come, become poorer in purse or other of those comforts which one needs or desires in this world. The fulfillment of such hope was not, of course, to be looked for to the letter, but we have great satisfaction in the knowledge that in possibly no other trade—certainly few—have the net results attained been more gratifying than in ours.

New faces—scores of them—have come among us since we last greeted each other as we shall do as the bells ring out a welcome to Christmas on Sunday next, and some, too, are no more to be found in their accustomed haunts. To the one class we extend that hearty welcome, those cheering words, which should be the pleasure of every man to offer to another; of the other we can but say, may they be no less successful in whatever walk of life they have adopted.

We find abundant cause for satisfaction in the growth and prosperity of our trade and pastime, and especially in the grand strides it has made in attracting the attention of the great public, and of men high in authority. The president of the United States has participated in the ceremonies of a L. A. W. meet; General Miles has urged the cycle upon military men as a vehicle for the use of soldiers; a committee of wheelmen has been granted an interview with the senate committee, and their request—a matter of interest alike to themselves and the public—received careful consideration. To wheelmen has been accorded, by press and public, the credit of having started the great movement now on foot for the betterment of our highways. These are but a few examples of

the many causes we have to congratulate ourselves on at this moment.

As we look forward to the year we shall so soon enter upon, what do we find? Surely, cause for congratulation. Unless nearly every cycle manufacturer in this country is at fault, we are to have a year which, for gigantic progress, has had no equal even in the cycle trade. In the sport we are to have something which has never before occurred in any branch of sport, viz: a thoroughly authentic series of races for the championship of the world, while so many other good things are held out to us that it were useless and indeed impossible to enumerate them.

Causes for congratulation and good feeling therefore greet us on every hand, and it is with unbounded satisfaction that we extend to every reader our wishes for a Merry Christmas and a happy and prosperous New Year.

THOSE MILWAUKEE EXPENSES.

The REFEREE is in receipt of a communication from Milwaukee in which it is positively denied that the racing board of the Milwaukee Wheelmen, during the recent indoor tournament, "imported a half dozen Chicago racing men and boarded them; that money was loaned them, or that others had their board and expenses paid for advertising purposes." The complaint further says: "There is no doubting the fact that the Chicago visitors were well treated and entertained in a handsome manner, and there is considerable speculation as to whether or not any member of the board, or any one, having a friend connected with the racing team, had not the right to entertain such a friend at his own expense, independent of any organization. The charges made in the editorial referred to are of a very serious character, and if true may be far-reaching in their results. It is directly charged that the racing board has, in open defiance to the L. A. W., ignored its rules and violated its obligations; that Chicago riders, presumably in good standing in the league, have received remuneration for their riding ability and advertising qualification, and that fancy riders have also received prizes."

And again: "If the racing board of the Milwaukee Wheelmen has in any way been guilty of any one of these flagrant charges, the members of the league should be informed regarding them. They claim them to be untrue, and in common justice to the Milwaukee Wheelmen they should be exonerated." The REFEREE has stated only facts, and it has in its possession evidence to bear out its statement regarding expenses being paid. The denials of the Milwaukee racing board have called out a few facts. It was admitted to a REFEREE representative by Davis, Buchanan, Young and others, in the reading room of the Republican house, Milwaukee, that they were there having a good time at no expense to themselves; that if the REFEREE man so desired his hotel expenses could be "fixed" all right—but he preferred to pay his own. At least a half dozen of the men were provided with tickets to Milwaukee and return, and a similar number admitted that they were sent there by the management of the meet. When the men returned from Milwaukee some of them boasted of the good time they had had at the expense of the Milwaukee Wheelmen; how their railroad fare had been given them; how Nicolet was loaded down with prize packages of patent leather shoes, neckties, underclothes, hats, gloves, etc., etc.; how Keator had borrowed \$15; how money was borrowed on which to have a good time; how they hoped another tournament would take place (as long as

several were without employment), and what good fellows the Milwaukeeans were. We grant they are, and they treat visitors more royally than ninety-nine out of every hundred places; but their generosity is too great. Not less than five of the men who went from Chicago to Milwaukee were out of employment, and up to last week at least three of that number were still without work and had been for many weeks. They admitted this, and also the fact that they had no money and had had none for some time—except, perhaps, enough now and then for lunches. Yet these men could go to Milwaukee, live at a first-class hotel for a week or so at their own expense! How silly is even such a suggestion. As before stated, this paper has evidence which will surprise even Mr. Schroeder. We have not made any rash statements; in other words, "we know what we're talking about."

We notice, by the way, that the southern record-breakers (who have broken no records as yet) have been warned by Mr. Watts of the racing board that that body "will inflict punishment for the violation of any of the provisions of that section" [sec. 9, art. III of the constitution]. The board should begin punishing immediately. Gentlemen of the racing board, read the following, which is a copy of a letter recently received by the Sercombe-Bolte Manufacturing Company of Milwaukee, it may be interesting:

SERCOMBE-BOLTE BICYCLE MANUFACTURING COMPANY.—NASHVILLE, TENN., Nov. 7.—How much a week will you give for Johnson, Rhodes and myself, they to become members Milwaukee club, to break all records from one mile to 100. To commence work this week if satisfactory, you to send Sanger to help get records. This is business, answer quick. T. W. Eck.

MAKE HASTE SLOWLY.

In no business, possibly, are so many sanguine persons found engaged as in the cycle trade. This is due to many causes, the primary one probably being that in this branch there is a greater mingling of business with pleasure—often too little of the one and too much of the other to be desirable—than in almost any other. It attracts many persons with small reputation and smaller financial resource, and these, by hook or by crook—often, we fear, by "crook" and an unlimited supply of "nerve"—manage to get credit somewhere and somehow. But it is not altogether of this class that we intend to speak, for there are in the trade many usually good business men whose good judgment is in this case exceeded by their enthusiasm.

In all our experience with these sanguine people—and we have heard many fearful and wonderful predictions in the days that have gone—we have never seen cycle trade men so unanimously certain of an immense season as they are with regard to 1893. Every man who has visited us with '93 designs—we mean designs on business, not designs in wheels—seems to regard it as a foregone conclusion that there will be no trouble whatever in disposing of all the wheels that can be built, and to a man, they answer us that the output of their respective factories will be increased—some largely, some moderately, but all increased. Let us hope that none will be disappointed, and yet, if a prediction were asked for we should hesitate a long time before endorsing the opinions of these enthusiasts. A few houses—a very few—will undoubtedly be able to dispose of, practically, all the wheels they can make. These are houses whose working machinery—by which we mean the staff of agents and other channels of supply—is in prime order. But there are others which should have learned, from ex-

perience, that to make haste slowly is an excellent rule, particularly in a business wherein designs are so changeable and demands so varying as in the cycle trade. For years the question with many has been, not how many can we sell, but how many can we make; the result—that either the factory or jobber or agent is overstocked. This leads to one of the most reprehensible practices of the trade—price cutting.

It might be well, in view of these facts for the trade to err on the conservative side rather than expose itself to unnecessary risks. The coming year will no doubt see a natural increase in demand, but that there is reason to anticipate an abnormal one we are by no means assured.

ON THE CHAMPIONSHIP QUESTION.

On more than one occasion we have referred to what we believe to be poor management on the part of the L. A. W. in allowing only members to compete for what are called the championships of America. We have maintained that these events should be open to all American riders, but not to residents of foreign countries. The formation of an international association, now an accomplished fact, seems to us to lend strength to these arguments. The English championships have been referred to as, virtually, championships of the world, for the reason that they were the only ones open to all comers. No matter what merit that argument may have possessed in the past, that merit has been squeezed out of it. In view of the formation of the international union it would seem to be the proper thing for the National Cyclists' Union to close its events and for the L. A. W. to so amend its rules as to admit to competition all American amateurs. This is due to the new association, for should the N. C. U. continue to harbor foreign riders or the L. A. W. invite them, the events thus promoted would be liable at any time to settle, beforehand, the questions which the international union is intended to solve, thus robbing the latter's events of interest, while, at the same time, doing an injustice to the men of their respective countries. We commend these facts to the careful consideration of the gentlemen in whose hands the racing interests of both countries and of the new union have been placed.

A WRITER in a recent number of the *Scientific American* explains that centrifugal force or momentum is not responsible for the bicycle remaining upright while in motion. He insists that but for the guiding wheel being constantly used no rider could maintain an equilibrium, and that the swaying motion so noticeable in unskilled riders is inseparable with the movement of the most skillful rider when upon the wheel, only that it is so slight as to be almost imperceptible. Perhaps the gentleman is capable of explaining how a man rides a unicycle hands off, or rides only the rear wheel of a safety. In the last named case the guiding (or steering) wheel certainly has nothing to do with the case.

A NOTICE appears in the current issue of the *Bulletin* to the effect that a constitutional convention of the L. A. W. will be held at Philadelphia on Feb. 20. This, of course, means that the annual meeting of the national assembly will be held there at the same time. Notices of proposed amendments to the constitution and by-laws must be published in the official organ at least thirty days prior to the date of the meetings. League officers are of the opinion that the convention will be the most important ever held, and in view of the importance of questions to be considered it is the duty of every section to see that a proper representation is in attendance. More on this subject later.

THE purpose of this article is to reduce to concrete shape, for the consideration of all interested, the ideas of one who has derived much pleasure and valuable knowledge, and also some occasional amusement, from a long standing habit of studying the newspaper and trade paper advertising methods of the cycling trade in comparison with the methods employed in other standard lines of business, particularly such as the carriage and hardware trades, etc. In this article the use of what may be properly called trade papers, that is, those publications which are devoted mainly or solely to the interests of the sport, and to the cycle trade, will be considered.

That these papers can and should be most advantageously used goes without saying; also that a special business such as the cycle trade, must, like other specialties, be pushed on special lines and by special methods, will be granted by everyone. Further, that the field for exercise of original taste and good judgment is a wide one even considered in the comparatively narrow confines of trade paper advertising. We all recognize and admire originality whenever and wherever we see it. Its characteristics are plain, and when exercised with good taste and judgment it is always very valuable in advertising; but, who is to say what constitutes good taste or sound judgment? This latter question can only be answered on broad ground and in a general way and can be easiest gotten at by a negative statement.

EXAMPLES OF POOR TASTE AND JUDGMENT.

Briefly, we must all agree that it is not good taste or sound judgment to berate or belittle or even mention one's competitors, either specifically or in a general way.

It is not good taste to use slang in print any more than in conversation.

It is not good judgment to print a lot of meaningless words that have no bearing on the point you wish to make.

It is not at all good judgment to make a lot of wild assertions and claims, the great improbability of which must strike any thinking man at a glance.

It is not good judgment to advertise that you can furnish first class goods at second-class prices; anyone knows it cannot be done.

The above points have for some time seemed to be thoroughly understood by the best houses in the trade, and probably a fair share of their success, and the confidence which the public has in them, should be attributed to the clear comprehension on their part from the very beginning that honest advertising is the only kind which will do.

However, there are still many firms, mostly, although not all of them, new to the trade, which are surely doing themselves harm by their methods of wording their advertisements, which they make take on the style of the cheap jewelry auctioneer and the street corner fakir. They make claims which, if true, would enable them to at once drive all competitors out of the market, or, with a beautiful trust in the credulity of the public,

calmly assert that they have actually accomplished such an end.

One of the very best advertising experts and authorities in giving advice to advertisers in the dry goods and kindred trades, argued with rare good judgment and all the force at his command against the all too common use, repetition and iteration of the word "bargains." He was right. That word had, by reason of endless use, become threadbare and meaningless.

NO ONE MAKER HAS THE BEST.

There is a parallel to this in the cycle trade and the purpose of calling attention to it is to protest against its further use. It has been the key-note of cycle advertisements for years, and is now old and smells to heaven, and should be buried in everlasting oblivion. The word is "best." Taking current issues of the REFEREE, Bearings, Wheel and World this word appears no less than twenty-six times in advertisements. Every maker cannot have the best and it is likely that none of them have, although they each may have that which is thoroughly good. Stick to the truth and claim your article to be as good as any, but do let us have an end to the word best.

Another point to consider is to always make your statements at least sound probable, and so word them as to run no danger of their ever being questioned by the reader, for the moment he finds reason to doubt your absolute candor and fairness, and begins to feel your claims cannot always be taken literally, your case is lost so far as he is concerned. This point may be best

ILLUSTRATED BY A FEW QUOTATIONS.

A firm which is making a fairly good machine, but is young in the business, calmly assert that the "— wheels are the recognized leaders." It is doubtful if this "recognition" is universal.

A prominent tire maker asserts that his valve is "perfect." This, probably, is the first instance of absolute perfection attained in the world.

Another tire maker, whose tire does not hold a single record, advertises "the fastest tire on earth."

Another concern, which is just making its appearance in the trade, advertises "the largest line in the market." It is highly probable that some of the old-line houses could discount this statement.

Still another young manufacturing company claims to have "the only wheel on strictly scientific lines." In view of the fact that the best cycle mechanics have been unable to determine what constitutes strictly scientific lines, for the reason that proper proportions differ, as the work of one mechanic is different from that required of another, this statement looks improbable.

Still another, with only one season's experience, says it is "no wonder we cannot fill orders." If this firm really is in this lucky condition, it should at once stop throwing away money on advertising.

Another small maker, whose trade is mostly confined to his own locality, says of his machine: "In competition it wins everything worth having." If this

is true, some other advertisers are handling the truth very carelessly.

A really large and responsible house falls into a mistake in making the old statement that its wheel is "absolutely the best." Admitting that it is a good one, it is doubtful if this statement, taken literally, will hold water.

NOW A PLEASANT CONTRAST.

Similar illustrations to the above might be added indefinitely, and it is a pleasure to turn from them to the advertisement of one of the very largest and most successful houses in the market, which, in a business-like way, states that it is "prepared to quote prices for first-class goods of all descriptions." Or to the advertisement of one of the very largest makers of parts in the world, who announces himself "manufacturer of high-class cycle materials of every description."

Another sterling maker, having announced certain records recently made on his machine, remarks: "Thus are the links forged in the chain of evidence that places at the head the —."

Another house of only a couple of years' standing, announces, in a business-like way, that it is the maker of "standard high grade wheels."

IN OTHER BRANCHES OF TRADE.

In the *Stoves and Hardware Reporter*, one of the most successful makers of hot water heating apparatus advertises his device as "economical in fuel, automatic, self-feeding. A steel section tubular boiler. Correspondence solicited from architects and those interested in heating large and small buildings." These few words cover the ground broadly, and their business-like tone must make a good impression upon the reader.

One of the very largest stove manufacturing houses in the world announces in the same paper that its stoves, "beside being attractive in appearance, are honest goods in material and construction." It could not say more in praise of its productions.

One of the standard makers of lamps and lanterns emphasizes what is a well-known fact, in advertising: "Our goods have stood the test of time and are safe and reliable; the name of — is plainly stamped on them." Manufacturers in any line who make assertions of this kind, and call attention to their own name as being a guarantee of quality, must perform protect that name by building highest grade goods.

A firm of well-known makers of hoisting apparatus comes straight to the point by advertising themselves as "manufacturers of safe, light-running elevators for hand or power. Send for catalogue." Nothing wild or gassy about this advertisement.

A maker of road carts whose goods are known to be in use everywhere illustrates his vehicle and says: "It is easy to enter, easy riding, finely finished, very durable, and a fast seller." This means a great deal more than if he had in an off-hand manner claimed it to be the best road cart in the universe without calling attention to its specific parts of excellence.

Another thoroughly reliable carriage maker says: "We challenge the world to produce the superior of this carriage." A challenge of that kind, if it means anything, means the maker's confidence in his goods.

A particularly happy thought is a phrase used by a very extensive hardware specialty concern, which says: "A good thing speaks for itself." This is true of specialties generally. A good thing certainly does speak for itself, no matter whether it is the only good thing on earth or not.

Another maker of hoisting apparatus,

in speaking of a special pulley, says: "An examination of these blocks will show that they have more to commend them for general use than any that have heretofore been made." A particularly comprehensive claim put in good language, something which will be remembered favorably.

An extensive maker of high grade varnishes recommends his goods as "economical, durable, brilliant and reliable." This emphasizes just the qualities which buyers are looking for in that line of goods.

In placing a new article on the market the makers show a handsome illustration of it and say: "This is the All Right neck yoke; look at it and see its advantages." Certainly a neat and taking way of getting the trade to examine his device.

A heavy-weight house in the carriage trade takes a whole page to say, "We are now moving into the largest body factory in the country and are prepared to contract for carriage wood work," following this announcement simply with the signature. The effectiveness of an advertisement of this nature lies in the under-current of confidence which the makers thus show in themselves and their reputation.

Another well-known carriage maker in speaking of a special pattern of his goods advertises it as "built of one grade, strictly first class, will compete in price with any wagon, quality considered." That is business straight from the shoulder and should bring him many inquiries.

An extensive wheel building concern uses the phrase, "our reputation is our trade mark." It has a good reputation, good trade mark and good advertisement, and is not apt to do anything to make this claim less effective.

There is one thing to be noticed in the above quotations, viz., that those which are criticised are found exclusively in the advertisements of young, inexperienced, or in some instances, old and very moderately successful houses, while those quotations which are to be commended are in every case found in the advertisements of houses whose business methods have made them successful. The deduction to be drawn from this comparison is very plain.

In looking over this advertising matter another question is worthy of brief attention, namely, the use of cuts, or striking designs in type to catch the eye of the reader. All advertisers know that the first thing to accomplish is to "catch the reader's eye. That done, the advertisement must contain something which will hold the eye and appeal to the sense of the reader. The bulk of this article has been written on the latter subject in the belief that it has heretofore received less attention than the mere question of catching the reader's eye, and that in his effort to attract attention the advertiser often neglects to consider the impression he may make, and whether it may be a lasting impression or not.

But to revert to the question of attracting attention. Striking cuts will always do it. Striking typographical arrangements generally do so. Nothing is better in this connection than to adopt something which will become a trademark in a certain sense. Let this be a cut of some kind, or a particular style of type for the firm name or the name of the wheel. Then let this be used invariably in advertisements of every kind, so that the moment it strikes the reader's eye it looks familiar to him and recalls either your goods or yourself to mind at once. If you use a cut it must be a good one and the design must also be good. The better the design and the better it is executed the better will be the impression made. If you choose to use comic cuts or cartoons, have a care to see that they are thoroughly comic and have in them the true spirit of caricature. A good joke always puts the reader in a good humor, while a poor joke is a poor thing in every way.

OF Mr. Robert William Thompson, of Adams street, Adelphi, in the county of Middlesex, England, is living, he will confer a favor by forwarding his daguerreotype to the editor of this paper. Will the gentleman please accept our thanks in advance, and rest easy in our assurance, that if modern art is capable, we will reproduce and publish his likeness, in a manner commensurate with the magnitude of the blessing his genius has conferred upon mankind. If Mr. T. is not now living at above address but has strayed away and lost himself, we stand prepared to pay a reward of one pound sterling for information leading to his discovery. If (and if so we regret it) he has gone on foot to that bourne, whence or where, to the best of our knowledge, locomotion is effected by means of reciprocating diaphragms attached to the shoulders, instead of by rotating life preservers attached to the feet—if as we say he has gone, without immediate and possibly remote intentions of return, then, with suitable apologies to his family, we call upon him, in our dulcet American tongue, to please turn over in his grave and kick himself that he did not reach maturity of intellect in 1891 rather than in 1845.

Not being possessed of proper data, we feel oppressed with a sense of our incompetence when we attempt to lay before our readers the salient details of the life of Robert T., yet we feel that something should be done during the happy holiday time, and especially now that the tariff question has recently been adjusted for the coming four years, to fix upon the public mind a sense of its obligation to this great man. Facts not being at hand, we must write our history as nineteenthents of all history is written, "as best befits the web of our story."

First, then, we assume that Robert was poor. Why? Because all inventors are poor.

Second, that he was a crank. Why? Because that name attaches to every man who is or ever was a day in advance of his time.

Third, that he was a disappointed man. Why? Because the best product of his brain was laughed at, scorned by an always "wiser and better than thou" public.

Fourth, that he is now forgotten, and the general public is prepared to believe that there never was such a man, and if there was, that there are plenty of Robert William Thompsons, and that they are no better than the rest of us.

Well! We are not seeking a fight with public opinion, so let it end here.

Robert William Thompson, then, was A POOR, DISAPPOINTED CRANK, who once lived (perhaps), and if he did, is long since forgotten.

But you ask, why this long preamble? What of Thompson, anyway?

Why, child, he invented the pneumatic tire.

"Oh, pshaw! Other men claim to have done that."

Yes, yes, boy, but Robert William arrived at the patent office first. You see, he realized the situation; his wife got him an early breakfast, Robert all the time scolding because the chimney did not draw that morn'g, and as he chewed

his half-cooked bacon and drank his cold coffee a bright idea came to his mind.

"Julia," says he, "when I get this invention covered by a double-riveted patent I will get up a chimney for that damned stove so that it will pull in one direction and not be backing and filling all the time."

Patient Julia, his good wife, said: "Bob, do hurry and get your papers filed. I want the worry off my mind. You are always thinking of a dozen things at once, and that's why we don't get on in the world."

Robert, under this stimulus, "got a move on him," and was waiting at the door of Her Majesty's patent office when it was opened for business.

So you see the preponderance of evidence shows that Thompson was the inventor of pneumatic tires; in other words "he got there first."

Did Robert realize what he had accomplished? Probably yes, but the general public would have none of it. He was

LIKE THE GREAT COLUMBUS

who discovered a few islands and eventually a continent, but died in the belief that it was the eastern coast of Asia. Now had Columbus known that he had turned up a new thing altogether, our America might have been called Columbus Land or Isabella Land. But supposing he had simply come upon the land he had been sailing for, and knowing all along that the land had a name, his natural modesty prevented him from imposing a new cognomen simply for the fun of the thing, and Isabella, away off there, without telegraphic or postal facilities to amount to much—well, she didn't know any better, and as to Ferdinand, he didn't amount to much anyway. But to resume.

Thompson, in his wildest dreams, never saw two wheels fitted with his life preservers, rolling along with a hump-back biped on top of them, and that's where Robert got left.

Poor Robert! His sand slid slowly but persistently down into the lower compartment of his life's glass, while great schemes of equipping locomotive engines, road vehicles, wheelbarrows, and all other rolling bodies, were chasing each other in his busy brain.

But the bicycle, where was it? Bob didn't find it ready to equip. It wasn't there. It wasn't anywhere, hence Robert William never thought of it. Let us point this moral before it escapes us.

Herein we see the limitations which a slowly-revolving destiny places upon human genius. It doesn't allow one mind to discover too much. Thank God for that! What would you and I be doing, dear friend, if one man could think of everything? I will tell you, if you can't think—we'd be paying rent; that's what we'd be doing.

Like many another great man, Thompson went out before the world had found any use for him. We presume his neighbor looked upon him somewhat as we do upon the inventor of an aluminum air ship.

But Thompson bequeathed to us a great idea. He didn't know that he had given it away, but we got it all the same. By giving a complete illustrated description of his invention to the patent

office he prevented it ever being forgotten, and here comes in the blessing of a patent.

IF THE INVENTOR DON'T USE IT some one else will, and we may add, if the inventor *does* use it, *every* one else will, so the end is about the same anyway.

Well, we have endeavored to impress upon your mind that Robert William Thompson, with the long post office address, invented the pneumatic tire and secured the exclusive right to make and sell the same, to himself, his heirs and assigns, for a term of years, and there R. W. T. stopped short. This event occurred Dec. 10, 1845.

Now let us read modern history. It is not necessary to review the mistakes which have been made, and which are now forgotten, neither can we give special mention to the different kinds of tires which have been successful and which are now knocking for recognition, because each manufacturer knows that his own make of tire is better than any other.

In the true spirit of commercial ethics (Heavens and earth! Commercial ethics! There never was any such thing. But choose your spirit then, anything you like and let us say) with pneumatic tires to-day the problem is,

HOW SHALL THEY BE FASTENED

to the wheel? What fabric shall be used for strength? By what method the fabric be disposed in the structure? What is the best valve? Shall we use one tube or two? Shall they be thick or thin, heavy or light?

Some time ago a pneumatic tire was being advertised under the startling headline, "The Pneumatic Tire Problem Solved." The tire was good, but the advertisement bad. The problem is still unsolved.

The solution of the problem rests with the rider. When (and the time it rapidly approaching) the bicycle rider appreciates the nature of the new tire, knows by experience what strains it will endure, learns to make his own repairs, in fact, becomes a competent road rider, then complaints will grow rapidly less.

Leaving the consideration of mere trade question (how dry such questions are, filled to the brim with brag, blow and bluster, hypocrisy, treachery and lies. It is not at Christmas time that we want dinners in our ears what has been a constant irritation to our nerves for a twelve-month) let us turn to a consideration of the good accomplished by the pneumatic tire.

Now this is a subject that one may grow really enthusiastic over. We believe that bicycle riding would have died out except for the young and athletic who

DELIGHT IN PUNISHING THEMSELVES physically. But with the pneumatic tire we have opened up a vast field, a new means of locomotion, adapted to the needs of all ages and all degrees of physical strength.

Manufacturers no longer need hesitate as to the number of wheels they will build. A standard wheel will be from this on, an always salable machine and can be carried through the winter without fear. Banks and capitalists will advance money liberally when needed on made up wheels, and the time is near at hand when every well-to-do household in the civilized world will have a bicycle.

We are to see a revolution, a revolution in road making, a revolution in locomotion. Those who judge of the bicycle as a toy for a hump-back, anxious looking, devil-may-care young man, or for the young woman made desperate for lack of physical exercise, or who consider

it as meant for racing, and to see how many miles can be covered in a certain time, take but a narrow view of the matter—they are either ignorant or inexperienced.

To ride all day under a hot sun, to ride one hundred miles in a few hours, for a badge, is hard work. To ride five miles, ten miles, or easily within one's strength, over country roads, past green fields, where the lark sings, is glorious recreation, beneficial to the mind and body alike, inducing good appetite, a healthy liver and sound sleep.

MAN WAS MADE TO LABOR PHYSICALLY. Exercise is not a fad. It is a necessity of our existence. Men and women in middle life are prone to grow fat; fat mentally as well as bodily. This tendency to fat has its compensation perhaps in toning down the exuberance of youth. The motion is less rapid, less erratic, but more certain.

The man learns not to mistake activity for work; yet as every man is conscious, to insure mental and bodily health (the terms are co-related) physical activity is a necessity. Some form of exercise must be systematically carried on. Those of us who have run through the list of athletic sports and reached a period in life where the thought of a cold shower bath "makes us to shudder and grow sick at heart," look upon violent physical exertion as being hurtful, and so it really is. We thus lose interest and take no part, except as spectators, in the many forms of out-door sport.

But as out-door exercise is necessary, what are we to do?

Ah, here is the remedy. The bicycle fitted with pneumatic tires. Now, friend, whoever you are, remember this kindly hint from one who knows: Once master the safety bicycle (it is easy to master) and you will bless the day and bless the busy men who furnished you with such an interesting, invigorating means of exercise.

To the brain worker it is a God-send. It is impossible to think connectedly while riding a bicycle. The blood is drawn from the brain, the attention is constantly attracted to the incidents of the road and the result is rest and rest of the best kind. Try it, you who are growing fat; ye who have squirmish nerves; ye who sleep ill at night; ye who have over-burdened livers. To paraphrase Charles Lamb, the man who rides a bicycle "Thinks like a sage and acts like a Samaritan."

F. W. MORGAN.

The Novelty Cyclometer.

A cyclometer of unusual merit will be placed on the market at once by the Recording Instrument Company, of Boston, which in itself is a novelty. This, by the way, is the name by which it will be known. It fastens readily to the front fork, runs to a hundred miles and repeats, or can be set at zero upon the commencement of each trip. This is one of its distinguishing features. It has been thoroughly tested the past season and is guaranteed by the manufacturers. It is simple, but all that can be desired, and must be a quick selling and favorite article with the trade. It will be exhibited at the Philadelphia Cycle Show.

Rudolph Manufacturing Company.]

In the line of oil, cement, polish, chain lubricants, etc., probably no concern does a larger business than the Rudolph Manufacturing Company, Chicago. The Rudolph brands of axle oil, lamp oil, graphite, enamel, liquid cement, rust remover, soft metal polish, rust preventer, emery paste, boot oil and grease remover are put up in cans of various sizes, and are handled generally by dealers throughout the United States.

THE ANNUAL BABY SHOW. PHILADELPHIA - 1893

THE FABLE OF BEN HASSAN AND THE CYCLE TRADE

BEING the true history of Ben-Hassan, surnamed Smith the drummer, when he went into the market to cry his goods.

* * *

And on a time during the reign and in the month called January, in the last year of the reign of the mighty caliph, Ben-Harrison (called the cold), there dwelt in the heart of a great city a certain builder of wheeled horses, named Smashem. And he had in his employ many and divers sorts of servants to do his bidding; and he builded many wheeled horses.

Howbeit he was greedy, and to save money he builded them from bad materials, although he sold them when he could at a great price.

Now Smashem was a shrewd man, and mighty in his trade, and he gave unto the dispensers of news and the fast runners before the people many shekels of gold and much treasure that they might cry aloud before the people that his goods were of great price; and many cunning devices did he invent that the people might come to him and buy.

Nevertheless, at the last the people found him out and would not buy, so he tore his garments and cast ashes in his beard, saying: "I am ruined unless I sell mine goods."

Then came to him one of his servants and said: "Behold, O master, a plan have I thought upon that may, peradventure, bring customers once more to you. Howbeit you must open your strong box and bring forth many pieces of gold and of silver that the plan may be well tried."

Then was Smashem filled with joy, and he fell upon his servant's neck and kissed him, saying: "Verily thou hast brought joy to thy master's heart—unfold now thy plan, and if it appear unto

live for ever; thus is my plan: Go thou forth and hire thee a 'drummer,' even a cunning seller of goods, and see that thou procurest one who hath much experience in lying (for verily there be many such) and one that can ride well upon the wheel horse; and if he be of those called 'the push,' hire him not, for there be a *limit* to lying, lest he be found out to soon. But see that he wear Mother Hubbard breeches and that he boasteth much of the many races he hath won and the popularity he hath in the trade. See to it also that he knoweth the difference between a wheel horse and a wheelbarrow, though such knowledge is *rare*, and I doubt not *costly*. When thou hast found this man, give unto him a wheeled horse and send him forth upon the steam chariot, up and down through the land that he may find the foreign customers and sell thy goods, even though as thou and I know they be not of the best."

Smashem harkened to the wisdom of his servant, girded up his loins and went

"He fell upon his servant's neck."

forth onto the street called Wabash—yea, even onto the "row"—and behold he saw many men leaning against the windows of the markets and against the posts that be upon the street. And when he came to them they cried aloud, saying: "Salam, O Smashem, hast thou need of a 'drummer'?"

And he questioned them, saying: "Canst thou lie? Knowest thou a wheeled horse from a wheeled barrow? And hast thou Mother Hubbard breeches?"

And they answered with one accord, "Aye."

Then he said unto them: "What wage dost thou require?"

And one said, "Fifty shekels," and another said, "One hundred shekels the month."

Now Smashem was a greedy man and he thought these sums too large. Therefore he passed on his way till he saw one standing alone. Then he spake unto

him saying: "Art thou a drummer?" And he said "Yea."

Then he questioned him as he had the others and he answered the same, for behold he was a greater liar than any, for he had never seen a wheeled horse.

Then said Smashem: "What wage dost thou require?" and he said: "Twenty-five shekels the month."

So he hired him and took him to his factory. Howbeit the wise servant knew not whom he had hired, because he had gone on a journey.

Then said Smashem to the drummer: "Get thee a wheeled horse and go forth up and down in the land and sell them to the 'Jays,' even to the 'Hayseeds,' for verily they know not the good from the bad. Behold, here are many pieces of money; get thee hence with great speed"—and he went.

But in this matter was Smashem greatly deceived, for those that he called Hayseeds and Jays had gained much knowledge from just such men as he. So therefore when the drummer, whose name was Ben-Hassan (surnamed the Smith) came into a city, and had come

"Leaning against the posts that be upon the street."

before one that he might sell to him, he found it no easy matter, inasmuch as he asked him many troublesome questions, like unto these:

"Where gettest thou the tubes in thy wheeled horse and what is the thickness thereof?"

"What condition of steel useth thou in thy bearings?"

"What manner of tires dost thou use, and dost thou warrant them unto me?"

Also many more of the like which Hassan found it difficult to answer, because he knew not and feared to lie lest he be caught. And the customer said further: "Verily have I heard of thy master, Ben-Smashem, and no good did I ever hear of him. Now can I buy many wheeled horses that I hear well of, therefore thou hadst best depart lest I have thee cast out," and he departed and went unto another, who likewise refused him.

Now the city was a small one and therefore there were none others that he might see, so he went unto another not far distant, and behold, he could do no better. Therefore he departed and came unto a great city, where there were many that dealt in wheeled horses and he said unto himself: "Now will I do much business," for he had a letter from his master in which were many hard words and no cheer.

And when he had come unto his inn and had rested himself he set out with a light heart and came to the greatest of the dealers. And when the servant had taken his card to his master he returned again to Ben-Hassan, saying: "Thus sayeth the master: 'Get out.'"

Therefore he got, and came unto another, who gave him many fair words

but would not buy. And when the night came he returned to the inn weary in mind, for he had sold no goods and his remittance had not yet come, though he had no money in his purse.

Howbeit on the next day he went forth

"That be called hayseeds and jays."

again, and after many rebuffs he came to a certain dealer, and he walked up and down the street before his door many times before he entered, that he might regain his courage, and when he had done this he sent in his card, and the master welcomed him, saying: "Verily I have been looking for you; therefore bring in your wheeled horse that I may see it."

And Ben-Hassan was joyful and ran and got the wheeled horse and shewed it to him.

And he said: "Verily, such have I never seen before; bring forth your contract—I will take 500 thereof."

After the servants had brought Ben-Hassan out of the swoon he fell into upon hearing this news, the contract was signed and Ben-Hassan sent a message even by lightning to Smashem, saying: "I have secured Busted's order for 500; send money."

And when he had come again to his inn he received from the host thereof this message:

You are a damphool. Busted couldn't pay for a handlebar. SMASHEM.

Now was Hassan greatly cast down, but he found his remittance at the inn and he said unto another who was with him at the time: "Let us go forth and have a 'time.'"

And they went to a certain club in the city, where they found many members of "the push," and these went with them, and they looked upon the beer when it was yellow, and likewise went to certain places where there was much

"They made merry with the maidens."

music and many maidens did dance upon a mighty platform.

And they made merry with the maidens and the beer [This has nothing to do with "Pinafore."—Ed.]. And when morning had come Ben-Hassan departed

"He tore his garments and put ashes in his beard."

me good, I will elevate thee; yea, I will even pay thee three shekels the week more than thou now gettest."

Then spake the servant: "Oh, master,

THE RUDGE, SYLPH AND OVERLAND

Will be on Exhibition in Spaces Number 29, 30 and 32 at the
PHILADELPHIA CYCLE SHOW.

TO BE HELD JANUARY 4th TO 14th, '93.

Each of these wheels have special features distinctly their own for '93, and every dealer and wheelman should investigate these points of superiority while attending the show. Mr. Fred Patee and Charles Duryea will be in charge.

THE RUDGE, made in the Rudge American branch factory, under our own supervision, from finished bearings, forgings, etc., is an old time-tried make that has always given satisfaction. Does this not commend it to every dealer and wheelman?

THE SYLPH (our own manufacture), is a three-part spring frame safety, a novelty that sells itself when given a trial. Nothing like it on the market, and the EASIEST RIDER ever produced.

THE OVERLAND (our own manufacture), is a medium-priced, high grade safety that has just passed through a most successful season. A new, light roadster Overland will be the special feature of the '93 line.

WE HAVE ALREADY MADE SOME CONTRACTS WITH LARGE DEALERS for 1893. Would you like to figure with us? Catalogue soon ready.

ROUSE, HAZARD & CO., 89 G St., PEORIA, ILL.

MANUFACTURERS, IMPORTERS AND JOBBERS.

COMPARE THE DIFFERENCE.

Between riding in a Farm Wagon and a Modern Carriage.

With the former the rider is shaken up and tossed about by every irregularity in the road, while the latter rides smoothly over the same course, even at greater speed. A passenger coach also rides easier than a freight car. The springs make the difference of course. In the construction of

Sylph Three-Part Spring Frame Safeties

The Spring is an important factor. It stops the jars and jolts, and gives its rider COMPLETE PLEASURE AND COMFORT. Riders of rigid frame machines and other styles of spring frames readily discover the difference when they give the Sylph a trial. "Sylph Cycles Run Easy," and those who try them always remark about the EASY RIDING QUALITIES. Our catalogue gives all the details, and will be mailed free for the asking.

AGENTS WANTED for 1893 for either a large or small territory.

ROUSE-DURYEA CYCLE CO.,

and took his head with him, though he would fain have left it behind. And when he had come to another city he sold one wheel horse.

Now after a time the wise servant returned to Smashem, and when he had told him what he had done, the servant tore his hair and his garment, saying: "Master, thou hast saved pence and lost pounds. Call in, therefore, this crazy Hassan and get thee a good man." And he called him in, and verily in two months he had sold one wheeled horse and spent many shekels. Howbeit when he had come again to the great city he boasted much in the market, saying: "I have been but few days out and I have sold 17,000 wheeled horses"—and many believed him. Selah!

* See heading.

New Track for Detroit.

For the wheelmen of Detroit next year appears heavily laden with good things. The Michigan Athletic Club has a bicycle track and is making arrangements to bestow a great deal of attention on cycling. This hustling young club has made very rapid strides in its growth and it now ranks almost with its older and more conservative brother, the Detroit Athletic Club, which also expects to equip a first-class track. It has been slow to act in this matter, but if it does conclude to build a track this is assurance sufficient of a first-class job.

Sanger Will Not Ride.

Sanger has decided positively that he will not participate in the races of the Milwaukee Wheelmen at the Exposition building Dec. 26 and Jan. 2. He has so informed the Telegram Cycling Club, of which he is a member. In view of this fact the club has decided not to enter any of the racing team and there is little doubt if any will ride.

BRITAIN'S OLDEST CLUB.

The Pickwick B. C., Organized in '70, Still Thrives.

Nearly a quarter of a century has flown since the formation of the pioneer bicycle club in England, the Pickwick B. C., and some brief remarks concerning this venerable institution may possess interest for the readers of the REFEREE. The first minutes of the club bear the date June 22, 1870. This was when the heavy boneshaker still flourished, with its hickory wheels tired with iron, its comfortless saddle and plain bearings. Upon these ponderous mounts the early Pickwickians took their little jaunts between Hackney and Ware, enjoying the excitement of their trips, but finding themselves in a bruised and aching condition on the subsequent day.

The Pickwick B. C. was founded at a time when the enthusiasm over Dickens' works was at its zenith, and every member was fitted out with a sobriquet taken from the "Pickwick Papers." This practice is observed to the present day and the only one to change his name is the captain, who is elected annually, and during his period of office always bears the title of Samuel Pickwick, Esq. The stock of available names has never been exhausted.

In the early days the Pickwick men held race meetings unapproached in their importance at a time when the Field was the only journal which recognized the existence of the growing sport. At these race meetings the elite of the existing cycling world came to compete or to view the sport. On the road, too, Pickwick men made a name for themselves. Stanley Thorp was the first wheelman to ride between London and York inside twenty-four hours. He succeeded in 1874 after two failures,

his mount being an Ariel with gun-metal bearings and socket steering, scaling over seventy pounds. The late Ion Keith-Falconer accompanied Thorp, but broke down on the way, subsequently making two vain attempts to beat Thorp's record.

At the Hampton Court meets, annual gatherings held each May down to 1882, the Pickwick members used to ride at the head of the long procession by virtue of their seniority, and Shirley Fussell acted for years as chief marshal. In common with many clubs of that period the Pickwickians wore a neat, dark blue serge uniform, and mounted upon tall ordinaries presented an effective appearance when on the road. To-day all this is changed. The club uniform is optional and the tall ordinary has passed away in favor of pneumaticised safeties.

Little is heard nowadays of the Pickwick, but the old club is full of vitality, and besides retaining a goodly proportion of its original members has absorbed many younger men. At its headquarters, the Orion Gymnasium, Corsterton street, Hackney, London, N. E., the members frequently meet, and although no attempt is made by the club to assume a leading part in the racing or legislative branches of the sport, the Pickwickians contrive to enjoy themselves throughout the year.

On the third of this month (December) they held their twenty-third annual dinner at the London Tavern, which proved a most delightful function, nearly eighty members and guests sitting down. The handsome chamber, with its dark oak ceiling and walls, the latter panelled with painted tiles, fairly bristled with original members and others, boasting twelve or fifteen years' connection with the club. Shirley Fussell (Count Smalltalk) presided, and in the four vice chairs sat Mr. Elliott

(Joe the fat boy), the sub-captain; T. J. Boulter (Samuel Pickwick, Esq.), captain; W. E. Blake (Hon. Mr. Crushton), the genial honorary secretary with iron gray hair, and E. Holland (Mr. Blotton), the energetic treasurer. About the tables were Major Benningfield (Grummer), W. E. Mavely (Sam Weller), H. Duesbury (Mr. Jingle), S. C. Rhodes (Lord Mutanhead), J. Atto (Nathaniel Pipkin) and many other well-known members. [There were six toasts, including the "Pickwick Bicycle Club," given by the president in an interesting speech overflowing with reminiscences. There was a distribution of prizes, for the old club still holds both path and road events for its small section of warm blooded speed riders. In recent years the club tours have been well supported, a club trip across the channel to France being a great success. At the Southern Counties Camp, too, the Pickwick has distinguished itself and met with a warm welcome from the many clubs with which it is on terms of friendship.]

They Will—Perhaps.

Julian P. Bliss declares he will not race next season—unless—

H. A. Githens says he will not race, but remarks, rather absent mindedly, "You know how that is."

Lumsden says he will ride harder than ever next season. "With a pretty wife to urge him on" he does not add, however.

C. W. Davis will be married in the spring and will not race—could not think of doing so. But then!

The Buffalo B. C.'s new officers are: President, George Dakin; vice-president, E. N. Hodges; secretary, F. C. Wardwell; treasurer, F. B. Gallagher; captain, A. A. Mason.

AN INTERNATIONAL MATCH

A CHRISTMAS STORY IN 3 CHAPTERS

-BY CHAS. PEREZ MURPHY-

CHAPTER I.
The Voice
of the People

IT WAS the beginning of the third week in December, and still the mild weather continued,

more like the middle of autumn than winter. The trees were bare, the roads hard and dry, and the public health was excellent; still, the extraordinary behavior of nature did not fail to cause considerable anxiety and discussion. The morning sun shone brightly on the low, gray building which served as a depot, telegraph office and freight house for the good people of Unionville, and two worthy farmers, sitting upon the steps, under the wide, projecting eaves, were exchanging desultory remarks upon topics of general and local interest.

"I's grand weather, anyhow," said Abel Simpkins, breaking a silence of several minutes.

"Too grand, altogether, to suit me," replied Hiram Wilkinson, with a disapproving shake of his gray head; "I says to my wife this mornin', 'Elizy Ann,' says I, 'this here warm weather is on-seasonable, and it's agoin' to make sickness; a green Christmas,' says I, 'makes a full church-yard,' says I; I've lived in the Black North nigh onto seventy years, and I never knowed that sign to fail."

"The young folks don't act as if they calc'lated to die,—not just yet," observed Mr. Simpkins, who was many years younger than his companion; "I counted 'leven bicycles as I came through the village, all acomin' down the street, one after the other."

"The young folks in this place is always plumb crazy of some subject," said Mr. Wilkinson, severely; "if it hain't one thing it's another; a few years ago it was roller-skatin', and they went and built that big rink that's been turned into a bean-house,—then base ball struck 'em, and now it's bicycles; the Lord only knows what the next thing'll be."

"Your boy rides, don't he?" inquired Mr. Simpkins, casually.

"You bet! Whenever he can git a chance; he's been at me for over two months to git him a bicycle, and I suppose I shall have to come to it, sooner or later. I says to him yesterday, says I, 'William Henry, look ahere! In the language of scriptur,' says I, 'there's a time for everything; there's a time to raise the devil and a time not to; there's a time to ride bicycles, an' there's a time to refrain from ridin'; and it's been borne in on me, William Henry, that your time to refrain from ridin' won't be up 'till them there apples in the barn cellar is looked over and sorted and otherwise tended to.' Here Mr. Wilkinson chuckled audibly.

"Did you hear about Mis' Gordon?"

asked Abel Simpkins, changing the subject.

"I heard she was havin' a three-wheeled thing made, to hitch onto the hind end of Harry's bicycle, so he can draw her; she said Harry had good, strong legs, but hers was agivin' out, and she reckoned she'd run after him enough when he was small, so he could afford to wait on her a little, now she's so old; she's goin' on ninety, ain't she?"

"Somewhere nigh; and she was that set agin' bicycles she couldn't bear one in sight till after Harry got hurt: they do say the boy'd 'a' bled to death, only for Jennie: she jumped onto a wheel and rode for the doctor for all she was worth, and he got onto his wheel and came down aflyin'. Mis' Gordon hain't said a word agin' bicycles, not since then. The boys are raisin' money to improve

scar't that they thought he'd go clean out of his min'."

"Humph!" ejaculated Mr. Wilkinson, "I didn't s'pose he had no mind to go out of."

"No more he hain't, strictly speakin'; do you know what he's up to now?"

"The last I heard," said Mr. Wilkinson, "he was tryin' to get the nomination for county clerk, and I says to my wife, 'Elizy Ann,' says I, 'if you'll believe it, Johnny Cooper's atryin' to git appinted county clerk.' 'County dog's foot,' says she; 'why, Hiram, he ain't no more fit for a county clerk than you be for a toad stool.'"

"Well, I guess he's kind o' give up that idee since he found out Farnsworth was goin' to run; Farnsworth's a hard man to buck agin', and it appears now that Cooper's quit politics and gone to

says I, 'you can't have no bicycle till I can raise the wind a little; but when you do git one,' says I, 'It'll be a good one,' says I, 'if I have to sell a cow to help

AS HER WHEEL SWEEPED ACROSS THE TRACK.

pay for it. Ain't that Farnsworth's girl comin' down the road?"

"Yes, that's her," replied Abel Simpkins, "and there's Jennie Gordon and Harry comin' along after her; they're comin' to take the train, I reckon."

Miss Ella Farnsworth, daughter of James Farnsworth, village lawyer and local politician, cast one hurried glance to the eastward as her wheel swept across the track. "Come along, Jennie," she called, turning toward Miss Gordon, who was just behind, "we'll have time for a spin around the park before train time."

"Don't know about that," muttered Abel Simpkins, consulting his watch, "the train's due now," but the three bicycles were already disappearing in the direction of the driving park near by.

"Yes, I can see the smoke," said Mr. Wilkinson, motioning eastward, "and here comes a lot more folks from the village; Farnsworth's expection' his nephew, I understand."

"Didn't know he had a nephew."

"It's his brother's boy; the family moved to Germany, or Europe, or some furran country years ago, and just got back; Farnsworth aint seen this feller since he was a kid. Here's the train, now."

With the usual puffing of smoke, whizzing of steam and clamor of bell, and the customary shouting of train-hands, the engine drew up in front of the depot; several persons got off, several others got on, and then, with a parting shriek of the whistle, the train moved on, westward, and presently disappeared.

"There's Farnsworth's nephew, I'll bet forty red apples," exclaimed Mr. Wilkinson; "that tall feller—the one that's just took the wheel out of the baggage car."

"He is a furran-looking chap, now aint he?" responded Abel Simpkins;

TWO WORTHY FARMERS SITTING UPON THE STEPS.

the roads, and they went to her day before yesterday, and she give 'em a cool five hundred. Now I call that lib'ral."

"Y-e-s," assented Mr. Wilkinson, with evident reluctance, "but Mis' Gordon's an awful rich woman, Abel, awful rich, and five hundred dollars hain't no more to her than five would be to you or me; besides, it hadn't struck me that the roads was in such awful bad shape."

"Our roads," said Abel with the air of a man who understood his subject, "is gettin' wore out; the stones is all comin' to the top, and there's an awful piece just north of here: Bill Jones drove into a kind of pitch-hole night before last and broke his hind ex', and only yesterday Lib. Shattuck was ridin' a wheel just north of the track, and she struck a stone and went, head first, plumb into the ditch. She lit on her head and laid there senseless. They carried her into Johnny Cooper's, and Johnny was that

makin' axe-helves; leastways, that's what the bicycle agent told me."

"Bicycle agent!" exclaimed Mr. Wilkinson, "I s'posed everybody that wanted a bicycle had got one before now."

"So did I," replied Abel Simpkins, "but it appears some of the Presbyterians wanted a few; they didn't want to lay out no money to speak of, and so, when this here agent came along, he sold about six for twenty-three dollars apiece."

"Be they good for anything?" inquired Mr. Wilkinson.

"Gosh, no! I should say they wasn't. Why, there was a man up south got one for his little girl—a beautiful child—and the first time she ever got onto it to ride, the blamed thing just fell all to pieces, and crippled her for life."

"Thunder!" exclaimed Mr. Wilkinson, deeply interested. "Well, I says to my boy the other day, 'William Henry,

"looks like a opera singer, or a 'Piscopalian, or some such critter."

"Looks like a I-talian, to me," said Mr. Wilkinson, decidedly.

Happily unconscious of these critical

"ROCHESTER MORNING SURPRISE,"
SHRIEKED THE BOY.

remarks, the subject of them stood in an attitude of confident expectation, leaning carelessly upon his wheel. Slightly above the medium height, slender, graceful and modishly dressed, he perhaps deserved, in a measure, the encomiums lavished upon him by the two friends. His skin was dark to swarthinness, his features were almost faultlessly regular, and his hair, of that deep shade of brown which usually passes for black, was short and curling; his clothes, though not intentionally conspicuous, betrayed a trans-Atlantic origin, and his face and manner betokened an European training, if not a foreign birth. He was a distinctly handsome fellow.

"Rochester Morning Surprise," shrieked the boy who sold newspapers;

"HAVE YOU A NOTICE TO SPARE?"

"full account of the shootin'; eight men killed and sixteen wounded; five thousand dollars reward for the arrest of the Rooshun prince that made the incendiary speech; escaped on a bicycle through the back winder of the city buildin', and haint been seen nor heard of since, a *Surprise* reporter interviews Mr. Clarence Farnsworth, a partic'lar friend. *Morning Surprise*, only three cents a copy!"

"Hi there, Jimmy!" called the ticket agent, emerging from his office with a mail bag in his hand; "just leave the

APPROACHED THE LITTLE GROUP OF MEN.

mail as you go along, and take one of these notices and tell them to tack it up in the post office."

"What be the notices?" asked Abel Simpkins, rising and approaching the agent.

"Take one, if you like; the conductor handed me a dozen or such a matter;" whereupon Mr. Simpkins took one of the printed slips and read aloud to Mr. Wilkinson:

"\$500 REWARD!

The above reward will be paid by the city of Rochester for the apprehension of Ivan Romanoff, a young Russian nobleman, who, on last (Tuesday) evening, made an incendiary speech before a socialist meeting, which led to the shooting of one man by a stranger in the audience. The missing Russian is twenty-six years of age, six feet in height, and is slender and well-formed; he has curling yellow hair, gray eyes, blonde mustache, and an unusually fair complexion. He escaped through a rear entrance to the building, and not the slightest clue to his whereabouts has as yet been obtained."

"Have you a notice to spare?" asked

shook hands in the most friendly manner.

"Here's them girls now," said Mr. Wilkinson, "and Harry comin' along behind, like the tail to a kite." At this moment Miss Farnsworth alighted from her wheel, and accompanied by Miss Gordon, approached the little group of men.

"I s'pose you're lookin' for your cousin, Ella," proceeded Mr. Wilkinson, with the inoffensive familiarity of an old man and an old friend; "well, this is him; we've been scrapin' acquaintance with him, Abel Simpkins and me. Mr. Farnsworth, this is your cousin Ella, your uncle's oldest girl, and this other young lady is Miss Gordon, a partic'lar friend, and this here little rascal is Harry Gordon, the biggest young scamp in the place;" and Mr. Wilkinson gave the aforesaid young scamp a good-humored thump between his square, boyish shoulders.

"Now, that's what I call manners," remarked Abel Simpkins, in a tone of

MR. FARNSWORTH WAS IN THE HABIT OF READING ALOUD.

someone just behind the agent; the voice was low and incisive, the accent decidedly foreign.

"Certainly," replied the agent politely, "and, excuse me, but I presume you're the Mr. Clarence Farnsworth, mentioned in connection with this shooting affair."

The handsome stranger raised his hat, and bowed a graceful assent; the gesture was so elaborate that it would, in most men, have seemed an affectation; with him, being natural, it was at once courteous and dignified.

"So you're Hank Farnsworth's boy, be you?" said old Mr. Wilkinson, with unwonted animation; "we mistrusted it was you, Abel Simpkins and me. Well, young feller, your father and me was toler'ble good friends thirty odd years ago, and I am glad to shake hands with his son;" here Mr. Wilkinson shook hands with almost effusive cordiality, while the young stranger expressed his delight at meeting any friend of his father.

"I reckon you expect somebody to meet you, like enough?" said Abel Simpkins, not wishing to be left in the background; "well, your cousin Ella was here about three minutes ago, and she'll be back again, right off. My name is Simpkins, and Mr. Wilkinson, her, and me is old friends and near neighbors;" and Mr. Simpkins and the new arrival

emphatic approval as, a few minutes later, he stood with Mr. Wilkinson and watched the four wheels disappear down the road to the village; "the Farnsworth's is an awful fine family and I s'pose old Mis' Gordon could buy and sell the whole of Unionville and never know it, but there ain't nothing proud nor stuck-up about none of 'em."

"Real, high-toned folks aint never stuck-up—they don't hev to be," replied Mr. Wilkinson, sententiously, "but just take one of these mushroom sort of critters, like Johnny Cooper, over here, and he'll put on more airs than a piece of putty. I wisht them girls had kep' away

THE TWO FRIENDS AMBLED SLOWLY AWAY.

for another five minutes, so's I could hev asked the feller more about the shootin' affair; it appears he was kind o' mixed up in it.

"O, well," said Abel, "you can read all about it in the mornin' paper, and like enough we'll run across this feller again."

So the two friends ambled slowly away, in the general direction of the post office, and the likelihood of their "running across the feller again," and under peculiar and exciting circumstances, was greater than either of them knew or imagined.

Note: The "Black North," so called from the exceeding richness of its soil, is an extensive region, something over one hundred miles in length, by from three to eight in breadth; it includes all that portion of northwestern New York which lies between the famous Ridge Road and the southern shores of Lake Ontario.

BREAKFAST in the Farnsworth household was, in some respects, the most social meal of the day. Seldom in any particular hurry to reach his law office, Mr. Farnsworth was in the habit of reading aloud to his wife and daughters from the papers of the previous evening, indulging meanwhile in a sort of running commentary upon their contents, his own remarks being liberally interspersed with observations by Mrs. and Miss Farnsworth, and further enlivened by an occasional question from Miss Lettie, aged eleven.

"I told Clarence not to get up to breakfast," observed the lady of the house, taking her place before the coffee urn. "He's tired out with his long journey, and the girls insisted yesterday afternoon upon dragging him to the rink and the driving-park; then, after tea, Jennie Gordon and Dr. Hudson dropped in, and he did not go to bed until after eleven; besides, it's easy to see that he's worried to death about that friend of his, the young Russian."

"And he's a prince, too—only think of it!" observed Lettie, who had a vague idea that her cousin's acquaintance with so important an individual redounded in some way to the credit of the entire family. "How I should like to see a real prince!"

"But a Russian prince, Lettie," said Ella, "isn't always a very exalted personage; not more so than a lord in England."

"Yes," assented her father, who prided himself upon the possession of sound democratic ideas, "I understand that princes in Russia are about as common as—well, as bicycles here in Unionville."

"Comparisons are odious, you know, papa."

"A most original and profound remark, Ella. Just please pass the butter if you don't feel too much exhausted."

"And, James, I wish you'd see what the evening papers have to say about the Russian affair; Ella and I haven't had time to look at them, and Clarence isn't as communicative on that subject as one would think he naturally would be; if there were any sense in such an idea, I should think he rather avoided the subject; and he gave a most indefinite account of his interviews with the reporters. Lettie! have the goodness to swallow part of what you have in your mouth before you try to cram in any

more. Your cousin's table manners are simply perfection, and we don't want him to think that he's fallen among savages here in America.

To this reproof from her mother Let-

LETTIE HAVE THE GOODNESS TO SWALLOW

tie, for obvious reasons, made no audible reply, and her father, having assured himself that she was not in imminent danger of choking, took up the paper which chanced to lie nearest at hand.

"Why, this is yesterday's *Surprise*," he exclaimed. "I must have overlooked it. What's this about five hundred dollar's reward?"

"That's what they've offered for the capture of the prince, Clarence's friend," replied Ella; "and that, I suppose, is what he seems to feel so awfully about. Just read along and see if you ever saw anything so ridiculous."

Mr. Farnsworth therefore read as follows:

"A SIGN OF THE TIMES.

"With a presidential campaign less than a year distant and already absorbing the attention of the leading men of the country, with a great international exhibition looming close behind the presidential campaign, and with the great double problem of capital and labor as far as ever from a final solution, it is, perhaps, not altogether unnatural that matters of seemingly minor importance should be partially overlooked. It is the duty, however, of a great newspaper (and the sworn circulation of the *SURPRISE* is greater than that of any other periodical in the county) to observe all the signs of the times, when those minor and more secret workings of the public mind must, of sheer necessity, escape the notice of papers less argoside than ourselves.

"The people of western New York will not fail to recall the fact that the *SURPRISE* has frequently and on more than one occasion called attention to those secret and mysterious conclaves which are held every week in an obscure, dimly-lighted and difficultly found room in our city building, an edifice erected for more elevated purposes than those to which it has of late been devoted and degenerated. Under the name of 'socialistic meetings' certain dangerous and desperate characters are known to gather weekly, in this retired and secluded spot, and we are creditably informed that their proceedings are invariably most anarchal if not positively nihilistic in their nature. On our first page we give, with our customary and circumstantial lucidity, a strictly impartial and unbiased account of the outrageous affair of last evening, in which a prominent and much-esteemed citizen (whose exact name and address we have as yet been unable to ascertain) was mortally wounded by a madman, reduced temporarily insane by the incendiary language of a young Russian outlaw, who is more than suspected of being a nihilist emissary. Mr. Clarence Farnsworth, a nephew, it is said, of Hon.

James Farnsworth of Unionville, was, we regret to say, instrumental in the escape of the Russian miscreant. Mr. Farnsworth brought a bicycle to the rear door of the city building, and the Russian disappeared as completely as if the earth had swallowed him. His arrest, however, can only be a matter of hours. Mr. Farnsworth, when called upon at a late hour by a *SURPRISE* reporter, was found in a darkened room at the Powers Hotel, suffering from a severe headache, brought on by the exciting events of the evening. It is understood that he carried an uneasy conscience and a constitution vitiated and impaired by a foreign training to Unionville by an early train this morning. The *SURPRISE* is never severe; if there is one thing more than another that it prides itself upon, it is the perfect candor and rigid impartiality with which it invariably treats all matters of either local or general interest—but why will wealthy Americans persist in cursing their sons and daughters with the evils of a foreign education?

"The murderer who fired the shot, and who refuses to give his name, now awaits identification at the jail. It is rumored that he is a prominent Chicago anarchist."

"Well, well!" exclaimed Mr. Farnsworth, "if Clarence isn't accustomed to the peculiarities of American journalism, I don't wonder he feels a little down in the mouth."

MR. FARNSWORTH.

"James," said his wife, impressively, "if you don't stop that miserable *Surprise* I shall burn up every copy of it that comes into the house. Foreign education, indeed!"

"Don't be too hard on the *Surprise*, my dear; the editor is one of the mildest men in the world, and his two daughters are studying at Heidelberg this very minute. Now, let's see what last night's *Astonisher* has to say; that usually goes to the opposite extreme, and, in most matters, I arrive at an approximation of the truth by drawing a line between the two. Ah! here we have it:

"MORE SIGNS OF IDIOCY.

"As a rule, we consider the habitual misstatements of our esteemed contemporary the *Morning Surprise*, quite beneath the dignified criticism of a paper which, like the *ASTONISHER*, has for nearly half a century enjoyed, and we trust merited, the liberal patronage of the people of western New York; we consider, also, that too much has been made of the very insignificant fracas which occurred last evening at the city building. But, since the *Surprise* has, on this occasion, positively surpassed all its former efforts in the line of flagrant misrepresentation—a feat which, but for the evidence of our own eyes, we should have deemed impossible—we owe it to our readers, and to the interests of truth itself to correct a few of its more glaring errors.

"A representative of the *ASTONISHER* called at the Powers Hotel, this morning and was received by Mr. Clarence Farnsworth in his own room. Mr. F. was ill in bed, and made no mention of leaving the city; in fact, he doubted his ability to rise before afternoon. He said that he and his friend, young Romanoff, had been strolling about the city on the previous evening, and had entered, by accident, the room—a prominent one, on the first floor—in which the workingmen's meeting was being held. They sat down for a few minutes, and, during a pause in

the proceedings, young Romanoff arose, for the purpose of correcting an error made by the last speaker in alluding to Russian affairs. The family of the young man are at present under the displeasure of

THE NEWLY-ARRIVED GUEST.

the Russian government, and were allude to by Mr. Keenan in his recent lecture in this city. Prince Romanoff's remarks were brief and of a most pacific character; but, as he sat down, a stranger in the audience rose to his feet, began shouting incoherently, and then, drawing a revolver, he fired, evidently at random. The shot, however, took effect in the arm of Thomas Khatt, a Front street saloon keeper, but, although the wound bled profusely, Mr. Khatt was not seriously injured, and was interviewed to-day at his place of business by a representative of the *ASTONISHER*. The man who fired the shot was immediately arrested, though he resisted furiously, and taken to the jail; it was learned to-day that he was a lunatic, who lately escaped from the State Hospital in Buffalo, and the officers of that institution have been requested to send for him. The *Surprise*, therefore, unintentionally stated a bare fact when it termed this unfortunate person a 'madman.' During the confusion which followed the shooting, the young Russian and his friend, Mr. Clarence Farnsworth, quietly withdrew; no bicycles, so far as we can learn, figured in their departure, both having left their wheels at the Powers Hotel. Neither does it appear that young Romanoff was in any way to blame for the disturbance. But certain well-meaning but misguided

HE LOOKS LIKE A PRINCE.

persons, misled by papers which, like the *Surprise*, are always scenting anarchy and nihilism from afar off, have offered a large reward for the apprehension and arrest of the Russian. These people have long desired to break up the meetings of the workingmen, and so make the most of this seeming opportunity, while young Romanoff, wholly ignorant of American laws and customs, doubtless considers it

prudent to keep out of sight for a few days.

"We advise all persons who desire to ascertain the exact meaning of such rhetorical expressions as 'tautology,' 'hyperbole,' and 'false syntax,' in their most unrestricted sense, to study the editorial columns of the *Surprise*, and we wonder that apostles of the so-called 'spelling reform,' have so long neglected the vast field for missionary labor which is daily opened to them by the same esteemed contemporary. By the way, what is the definition of 'argoside?' The *ASTONISHER* is always desirous of increasing its own stock of useful knowledge, but we have vainly searched Webster and Worcester, not to mention the numerous foreign lexicons in our possession, for the meaning and derivation of this lovely word."

"Well!" observed Mrs. Farnsworth, complacently, "you said that the *Astonisher* would be as far out of the way as the *Surprise*."

"So I did."

"But it seems to me that this article is as unbiased as possible."

"Draw the line between the two statements, my dear, as I believe I also suggested; briefly comparing the articles, I conclude that our Russian friend *did* say some rather severe things, and that there is more to the affair than has yet come out. Hello! anything for an advertisement! Just listen to this, under 'Cycling Notes':

"The bicycle upon which the Russian prince left the city building, last evening, was a this year's Columbia. Nothing but the best and strongest wheel in the market could have escaped, uninjured, the rough usage that it received. Conolly has the best stock in the city; call and see them."

"Why, papa!" exclaimed Ella, who had taken up the *Surprise*, and was glancing casually over it, "hear this; as usual, these two papers entirely disagree:

"The bicycle which figured so prominently in the escape of the Russian prince, last evening, was an improved Victor, the strongest, lightest and best wheel ever made. Conolly has a full line of them."

"What an awful lie!" exclaimed Lettie; "that is, one of them *must* be a lie."

"Both, most likely," replied her father; "my dear, isn't that the *Consternational* that you are looking at? If so, please glance at the bicycling column and see what you find."

"Nothing about the prince, I think; why, yes, here is a short paragraph:

"It has been ascertained that the bicycle upon which the young Russian rode down the back stairs of the city building, last night, was furnished with the *Dunlop* pneumatic tires. Nothing else could have withstood the tremendous rebound which ensued when the wheel struck the pavement. Conolly has a brand-new stock of these famous tires; call and see them, at his old stand on South St. Paul street. The wheel used by the prince was a *Hartford*, of which Conolly always has a full assortment."

"Papa," inquired Lettie, "do newspaper men ever go to heaven?"

"Sometimes, my daughter, sometimes; why, it is said that even lawyers occasionally argue their way through the pearly gates."

Here the newly-arrived guest entered, with many apologies for his laziness, and the conversation became general.

"How very strange these family resemblances are," remarked Mrs. Farnsworth, after various subjects, including the proposed international bicycle match, had been touched upon; "a stranger,

James, would scarcely detect a likeness between you and Clarence, and yet there certainly is one; it lies in the eyes, I think."

A slightly amused expression flitted over the face of the younger man as he made some inconsequent observation by way of reply; and, indeed, a less acute person than Mrs. Farnsworth would have found difficulty in discovering even one point of resemblance between these two. Mr. James Farnsworth was short, stout and florid, with sandy hair and whiskers, and a general expression of good-natured shrewdness; his features were indeterminate, his eyes gray and bright. The young man, now sitting at the right hand of his hostess, had a head like the Grecian Apollo, and, from the dark, curling hair, brushed away from the wide forehead, to the strong and wonderfully perfect chin, one looked in vain for flaw or blemish; the eyes alone seemed singularly at variance with the jetty brows and lashes and the clear, olive skin. Handsome eyes, no doubt, but they were steel-gray, and their northern beauty seemed out of place amid all this southern richness of coloring.

"Mr. Abel Simpkins is at the door, sir, and wants to speak to you," said the servant, entering the room as the family rose, at length, from the table.

"Very well," said the lawyer, "I'll be right out; I'm going down to the office."

"And—ahem—Uncle James, if you can spare me a few minutes this morning, I think I'll walk along with you; I want to consult you about a business matter."

"Certainly, Clarence, certainly. I'm not at all rushed this morning and shall be very glad to talk with you."

"What a splendid-looking fellow Clarence is!" said Mrs. Farnsworth, as she watched the tall, elegant figure disappearing through the front gate; "he looks like a prince himself; I'm really proud of him."

"I wish the prince would get out of this scrape and come and visit us," said Lettie; "I want to see him."

"You're not a bit of a Democrat, Lettie," replied her mother; "you've fallen in love with a title."

And Ella said nothing.

WHATEVER may have been the subject of discussion between Mr. Farnsworth and his guest, the result of their conversation was not immediately made known to the ladies of the family. The two gentlemen returned home to lunch, looking grave and preoccupied, and Mr. Farnsworth announced at the table, that important business would oblige him to go to Rochester, by the evening train, and that he might be absent for a day or two. Mrs. Farnsworth and Ella became vaguely conscious that there was a mystery somewhere, and awaited developments with some anxiety, while the lawyer's errand in the city, though destined to be ultimately successful, did not stay at once, the march of events, which, by the way, is always a most difficult thing either to hasten or to hinder.

It is the nature of truth to make itself known, which is nearly equivalent to saying that a secret is very difficult to keep; indeed, a man whose whole life was, in a manner, overshadowed by secrets, once said, that the surest way of preserving one was to flaunt it so persistently before the public gaze that no one would notice it—on the principle that any object, when held too close to the eyes, is practically indistinguishable and serves also as a blind.

Mr. Thomas Khatt, the front street saloon-keeper, the man injured during the fracas at the city building, was a most disagreeable person, who only awaited a favorable opportunity to become positively obnoxious. Born and reared among Bavarian socialists and Freethinkers, Mr.

MR. THOMAS KHATT.

Khatt had brought with him to the new world many of the most objectionable doctrines, and, outwardly subservient to the letter of the law, in reality, he snapped his fingers at all ordinances whether human or divine. Mr. Thomas Khatt was already, in many respects, a dangerous man, whom a revolution, or any general upheaval of society, would have carried to the surface of events; at present he remained in obscurity, an active element of disintegration, though, as yet, a merely passive enemy of law, order and existing institutions. Fifty year old, short, thick-set, and wearing one of those chronic smiles, which become slightly wearisome after a straight half hour or so, a widower of many years' standing, Mr. Khatt's one affection in life was for his only son, Thomas Khatt, Jr., who by the way, was no kitten, being already in his thirtieth year.

Thomas, Jr., when not behind the bar of the saloon, was usually to be seen hanging about police-headquarters, or the office of the chief of detectives; indeed, Thomas, Jr., had come to be regarded as a sort of "sup" by the regular members of the force, and, if any particularly dirty job was on hand, like the raiding of the dives on Murderer's Row, his willing services were occasionally enlisted. Personally, he was an awkward, heavy-featured young man, addicted to loud jewelry and cheap cigars, to flashy neckties and beer, and to pantaloons of a conspicuous plaid.

Since the affair at the city building, Mr. Thomas Khatt had considered himself a martyr to the cause of liberty, and had burned to avenge his wrongs; that the shot had been fired by a lunatic did not, in his eyes, mitigate, in the very least, the enormity of the offence. Possessed of an inbred hatred of rank and titles, he naturally regarded the young Russian as the most fitting subject for punishment, and being of an avaricious turn of mind, the reward of five hundred dollars greatly stimulated his desire for revenge; therefore, Mr. Khatt took his worthy son into his confidence, and desired him to visit the Powers Hotel and there obtain such information as he could regard the Russian, Romanoff, and his American friend, Mr. Clarence Farnsworth.

Thomas Jr., fell in with his father's views with the utmost alacrity, and donning his largest watch-chain and his most brilliant apparel, set forth at once on his congenial errand; and as, with the largest of walking-sticks in his hand and the vilest of cigars between his teeth, he went swaggering down East Main street, and past the "Four Corners," he gave an observant artist an idea for a brand new picture, to be entitled "The Tough: A study from Life." By

consulting the hotel register and cautiously questioning one or two bellboys, Thomas, Jr., ascertained that Mr. Clarence Farnsworth, or someone bearing that name, was still at the Powers, that

HE WENT SWAGGERING DOWN EAST MAIN STREET.

a slight illness confined him to his room, and that the Hon. James Farnsworth, of Unionville, was at present also a guest of the house. More than this, Thomas, Jr., learned that Mr. Clarence Farnsworth was of medium height, with brown hair and dark eyes—in short, that this description did not tally at all with that of the Russian, as given by his father. Concerning the prince, Thomas, Jr., could learn positively nothing, aside from the fact of his abrupt disappearance; he had vanished, utterly, and no one at the Powers had the faintest idea of his present whereabouts. On the evening of the socialist meeting, he and Mr. Farnsworth had come in together, going directly to their rooms; shortly afterward, Mr. Farnsworth had come down stairs alone, and taking one of the bicycles, which were just alike, had gone out by way of the Fitzhugh street entrance; no one had noticed his return, but when the officers came he was alone in his room. Oh, yes! They knew it was Mr. Farnsworth that went out; he had spoken to one of the boys in passing; besides, the prince was tall and large; but he was gone, and whatever Mr. Farnsworth knew he was sharp enough to keep to himself.

Thomas, Jr., went back to the saloon and reported, and Thomas, Sr., sat down

A SCRAP OF CONVERSATION CLEARLY NOT INTENDED FOR HER EARS.

over a schupper of ale, and meditated in silence for some minutes.

"Tom," he said at length, "it's my belief that this devilish Russian is out in Unionville, and if I can get Schneider's boy to tend the place for a day, you and I'll just drive out there and nab him; a man can afford to take a little trouble for five hundred dollars."

But if Mr. Khatt had looked over his copy of the morning *Surprise*, which

arrived quite early on the day of the projected trip, he might have seen that the reward had been withdrawn; also another statement that would have pleased him quite as little. James Farnsworth had wasted no time since his arrival in the Flower City, and events were evidently drawing to a focus.

Happily unconscious of lurking mischief, the family in Unionville pursued the even tenor of their way. The holidays were approaching, and the public mind was divided between two important events. First, a grand bicycling tournament, followed by a ball, to be held at the mammoth rink, which was already being swept, garnished and hung with evergreens in anticipation of Christmas eve, and, second, a New Year's party, to be given by the aged and wealthy Mrs. Gordon.

"Farnsworth's nephew" had proved already a most delightful acquisition to the village society, and he and Miss Ella were well-nigh inseparable; indeed, their fondness for each other's company was occasioning some good-natured remarks, and on the evening of her father's return from the city, little Lettie in crossing the hall, was favored with a scrap of conversation clearly not intended for her ears.

"Nonsense, my dear!" Mr. Farnsworth was saying; "Ella is little more than a child, and cares no more for him than you do; he's an attractive fellow, and excellent company, and that's all there is to it."

"I have eyes, James," replied Mrs. Farnsworth, sententiously, "and much as I like Clarence, I should never consent that a child of mine should marry her own cousin. Look at case—that we know; look at the royal families of Europe, growing positively imbecile through inter-marriage; look at those wretched Austrians—the House of Hapsburg—a poor, miserable set of epileptics, just cumbering the earth—"

Mrs. Farnsworth was waxing eloquent but Lettie heard no more, being too conscientious to stop and listen; still, what she had heard furnished food for reflection. She was a romantic little thing, with an imagination over-stimulated, first, by fairy tales, then by indiscriminate novel-reading, and last of all, by the misfortunes and adventures of this mysterious prince, who had swam so recently within her ken; when alone with their guest, she never wearied of questioning him regarding the prince and the prince's family, all now in exile by order of the Czar, and over and over again, he told her of the vast ancestral estates on the Volga, of the palace in Petersburg, and of the rows of houses in Moscow, all now confiscated by order of the Czar. For it was charged upon the Romanoffs that they were implicated in a certain political plot, discovered upon the eve of its consummation.

With the luckless Romanoffs as far as possible from her mind, and a wholly new idea in possession of her glowing imagination, Lettie now entered the library, where she was surprised to find the subject of her thoughts fast asleep upon a sofa. The spirit of mischief came over her, and, crossing the room on tiptoe, she crouched behind the head of the sofa, reached stealthily up, and grasped a handful of the soft, dark curls; harder and harder she pulled; how soundly Clarence slept! Surely that last wrench ought to have awakened him; but how heavily he still breathed! Lettie twined her slender fingers still more closely in his hair, and then, giving a pull still harder than any of the others, she sprang upright with a cry of dismay, just as the young man, now thoroughly awake, leaped suddenly to his feet and faced her standing there, white and

scared, and staring, first at the blonde head, now uncovered, and then at the dark curls, still held in her petrified grasp.

With one glance he took in the situation; with one hasty movement he snatched the wig from her unresisting

HE KNELT BEFORE THE STILL MOTIONLESS CHILD.

hand, and, hurriedly crossing the room to the mantel, he rapidly adjusted, before the mirror, the steel springs which secured it at the temples; then returning he knelt before the still motionless child, and gently folded her in his arms.

"My dear," he said, "I am sure you can keep my secret for a few days longer. Lettie, I am Ivan Romanoff, the prince; this is the disguise that I wore when I fled from Russia to avoid being sent to Siberia. I resumed it again after the trouble I had in Rochester, and your cousin, Clarence Farnsworth, who may be here any day, kindly lent me his name."

Lettie's lips, to which the color was slowly returning, twitched convulsively, and a faint smile lightened her face; but when, at length, she recovered the use of her tongue, her words were the very last that Ivan Romanoff expected to hear. With a few moments longer she would have recovered herself, and her reasonable little soul would have risen to the very sensational exigencies of the occasion. As it was, being thoroughly upset and off her guard, she led her two pet trumps—her sister and the prince of her day-dreams—and the idea of a possible recklessness did not occur to her until "hedging" was quite out of the question.

"I won't tell," she said, with a sorry little attempt at composure, "and I'm really very glad of it. You see, mamma wouldn't let Ella marry her cousin, on account of the royal families of Europe, and those poor Austrians, and—something about epileptic fits, though I don't see what they have to do with it; but if you're not our cousin, why, of course, you can marry Ella if you want to—that is, if she'll have you, and I rather think she will."

"Do you?" said the prince, repressing a smile; "I mean to ask her."

"I hope you will," said Lettie gravely, "it would be so very pleasant to have a prince for a brother-in-law!"

As the prince had prophesied, Clarence Farnsworth—the genuine article, this time—appeared in Unionville in the course of a few days, but, though he speedily became a favorite in the Farnsworth circle, the prince, now in his own proper person, was more popular than ever. A foreign prince—an exile—who had come among them in disguise! What a sensation for the good people of Unionville!

In the Christmas festival, at the rink, the fancy bicycle riding of young Romanoff was an important and novel fea-

ture of the evening, and, in the hall which followed, his blonde magnificence, no longer concealed by wig or walnut stain, was more striking than ever as he led Miss Ella Farnsworth to the head of the first quadrille.

Clearly, there was an understanding of some sort between these two, or else the general public was greatly mistaken.

But the crowning event of the season was to be the big party at Mrs. Gordon's, and the immense drawing rooms of her roomy, old-fashioned house had been newly decorated, by way of partial preparation.

"Ivan," said Clarence Farnsworth, as on the afternoon preceding the party the two were alone, after lunch, in the privacy of their own apartment, "by the way, I shall have to call you 'John' if you are going to marry my cousin and settle down into a plain American citizen; but, as I was going to say, suppose we just take a spin up to old Wilkinson's; he's a jolly old crank, and used to know my father, and he's just bought a bang-up wheel for his boy, William Henry. They say it's a dandy machine, and I want to look it over."

"How you do pick up American—what

"I hope you will hear from him, with all my heart; but let us be going."

William Henry Wilkinson, a stout boy of sixteen, was in solitary possession of the premises when the two friends arrived. Immensely flattered by the visit, he not only put his new wheel on exhibition, but took them to see the horses, the cows and even the pigs. After half an hour spent with the boy the young men were just about to go, when a small delivery wagon, drawn by a somewhat decrepit horse, drew up in front of the house, and two men alighted and entered the yard, walking directly up to William Henry and his visitors. The elder, a man of fifty or thereabout, wore a disagreeable smile, while the younger, a flashily-dressed fellow, with the word "loafer" written in every line of his ugly face, seemed making an unsuccessful effort to look dignified.

"Have I the honor of addressing the Prince Romanoff?" inquired the elder man, with an emphasis that was ominous'y sarcastic. Romanoff bowed a somewhat haughty assent, and the flashily-dressed individual, stepping quickly forward, laid a heavy hand upon the prince's arm.

"WHAT IN THUNDER DOES THIS MEAN?"

is the name of it? Argot? No, slang," said the prince; but as he gave the Italian accent to the *a*, and so pronounced the word "slong," Clarence could not help laughing.

"Laugh, if you wish," said the prince, good-naturedly; "you poor, cliff-dwelling, mound-building aboriginal! I have not forgotten your late attempts at speaking Russian. However, I'm ready for a call on Mr. Wilkinson. I met him, I remember, the day I came here. By the way, old fellow, do you believe in presentiments?"

"Not a bit; why? Who's been having any?"

"Your humble servant," replied the prince, with an obsequious flourish of the hair brush; his bright yellow hair, soft and lightly curling, was growing rapidly, and he took an almost childish pleasure in training it the way it should go. "I have been thinking all day of my friend Poloffski, of the secretary's office, and fancy I am going to hear from him; he was told to address me here."

"Then, Ivan Romanoff," said he, "I arrest you in the name of the law."

And now, I regret to say, Ivan committed the most undignified action of his whole life. Unfamiliar with American laws and institutions, an exile from his own land, and under the displeasure of his own government; for months a hunted refugee, flying, in disguise, out of Russia, across Europe and, eventually, over the Atlantic; born, moreover, a subject of the most despotic of the northern monarchs, Ivan Romanoff had come to fear the very name of "the law." The terror of the pursued fell suddenly upon him, and, without stopping to think whether the law represented by these two men was Russian or American, the prince's first impulse was toward instant flight. So, remembering that his muscular legs had served him well upon more than one previous occasion, he drew back his athletic right arm, clenched his fist, and planted a mighty blow exactly between the eyes of his would-be captor, then, turning upon his heel, he made for the highway with the

speed of a professional runner. Clarence Farnsworth followed him.

Thomas Khatt, Jr., had a skull like a Guinea negro, but even he was bewildered, for an instant, by the terrific force of the prince's blow. Recovering himself presently, he seized the wheel nearest at hand, which chanced to be that of William Henry, and, springing into the saddle, started in rapid pursuit.

The Wilkinson homestead stood upon a hill, and, reaching the foot of this declivity, the prince nearly ran into the arms of Mr. Wilkinson himself, who, accompanied by Abel Simpkins, was returning from his diurnal pilgrimage to the post-office.

"What in thunder does this mean?" demanded the old man, as he seized Ivan by both arms, just in time to prevent a violent collision; "what's a chasin' you—a bear?"

"No," answered the prince, who was beginning to recover his courage, "but I was up at your house, with Farnsworth [here Clarence arrived upon the scene] and two officers came to arrest me, what for I don't know."

"Arrest my bay mare!" exclaimed Mr. Wilkinson scornfully; "you couldn't be arrested on only one charge, and your uncle—Lawyer Farnsworth, I mean—has been and squashed the indictment; don't seem as ef 'squashed' was precisely the word, but its nigh enough I reckon; I've jest been appointed justice in place of the late Johnny Cooper, deceased."

"What!" cried Clarence, addressing Mr. Simpkins; "is Mr. Cooper dead?"

"Speakin' in a figgerative manner, he is," replied Abel; "so far as politics and public offices is concerned, he's dead and buried and forever passed away. He's been declared incompetent to fill any position of trust, and they say he's a-goin to leave town."

"Here comes that fellow now," said Clarence.

"An' I swan!" added Mr. Wilkinson indignantly, "if he hain't on William Henry's new bicycle! Here, you!" cried the newly-appointed justice, "git off of that 'ere bicycle, and give an account of yourself; what's your name?"

"Khatt," replied Thomas Junior, briefly.

"Well, you're the gol-durndest lookin' cat I ever came across; a sort of a wild-cat. hain't you?"

"I've come to arrest that man," said Thomas Junior, indicating the prince; "there's a reward of five hundred dollars, and"—

"No sech thing!" interrupted the justice; "Abel, find that there piece you was just a-readin';" whereupon Mr. Simpkins drew a newspaper from his pocket, and, under the head of "Court Notes," read as follows:

"Hon. James Farnsworth, having sat-

PLANTED A MIGHTY BLOW.

isfactorily proven that there were no sufficient grounds for action in the case of the people against Ivan Romanoff, the indictment was declared quashed.

MORGAN & WRIGHT

MANUFACTURERS OF

RUBBER

GOODS

331 to 339 West Lake Street,
CHICAGO.

ESTABLISHED 1882.

BICYCLE RIDERS, ATTENTION:

All Morgan & Wright Tires for 1893 will have our firm name in raised letters on the outside of cover, also "patent applied for."

BEWARE OF IMITATIONS.

If you choose Morgan & Wright tires for your '93 mount see that they have our name on the cover as above described.

YOU WILL FIND

Our tires to be superior to any imitation tires. They are also covered by a practical guarantee.

OUR VALVE,

Which, during the past season was acknowledged to be the lightest and simplest in practical use, has been improved in minor details and will be found perfect.

OUR TUBES FOR '93

Will be found the most perfect ever produced. These will be found inside our tires and not in short samples shown to the trade.

MORGAN & WRIGHT TIRES

Have been greatly improved in valves and inner tubes.

OUR INNER TUBE,

Made by a new process, is the most perfect ever produced. It is equally strong in all points and is seamless.

ALL PRACTICAL RIDERS

Who have seen our new tube have declared it the most perfect ever put in a tire.

THE QUALITY OF OUR TIRES.

We will make but one quality of tire and this tire is made of pure Para rubber of the finest quality and of the strongest fabric which six months' experience in testing the strength of various fabrics could discover.

We have put to practical tests several of the much talked of special fabrics, and, having made up tires from these different fibres, subjected them to hydraulic pressure to a bursting point, when we found them inferior to fabrics we have been using.

MORGAN & WRIGHT,

331-339 WEST LAKE STREET, - - CHICAGO, ILL.

The reward offered for the arrest of the Russian has also been withdrawn."

"Quashed," repeated Mr. Wilkinson, *sotto voce*, "I must remember that. Now, young feller, you'd better be a-makin' tracks. Where did you raise that there bicycle?"

"I borrowed it."

"Who of?"

"Nobody; I took it to chase the prisoner with."

"I don't see no prisoners, but I'm a justice of the peace myself, and I've got a devilish good notion to arrest you for stealin' my son's wheel; be them your best breeches?"

"No, they ain't," growled Thomas Junior, whose native impudence seemed to have been knocked out of him.

"My boy's been wantin' a checker-board, and I was a-thinkin' of makin' you an offer fur 'em; but, come to look 'em over, I guess the squares is about seven times too big. Now, git a gait on you, and light right out o' here." And Thomas Junior, a great bully, but a coward to the tips of his stumpy fingers, turned, without another word, and walked rapidly up the hill.

* * *

It was New Year's eve, and Mrs. Gordon's spacious house was overflowing with guests. In a dress of black satin, cut with a court train, the venerable lady had herself received her friends; she wore no jewels, but some rare point lace, yellow and old, encircled her throat and wrists, while a cap of the same costly material adorned her still abundant, though snow-white hair. "No jewels, my dear," she had said to her grand-niece, Jennie, when the latter had pleaded in favor of certain amethysts; "at my time of life, a woman had better be thinking of a monument than of jewelry." Miss Jennie, very lovely in pale blue silk and pearls, had assisted her aunt in receiving, and, since then, had been among the merriest of the dancers.

"I had ventured to suppose," remarked Mrs. Gordon, as she sat, *tete-a-tete*, with her friend and favorite, young Dr. Hudson, "that some of the older people would want to go home soon after supper, and let the younger ones have the floor; but, as they didn't seem to start, I had the chairs arranged along the walls, instead of having part of them carried out as I had intended. Heigho! I wonder if I shall ever give another party?"

"Many others, I trust," replied Tom Hudson, as he regarded affectionately the withered, but still handsome face of his oldest friend; "your health, my dear madam, has seldom been better than now."

"Very true, Tom, very true; but a woman of my age—nearly ninety—is like one of the old oaks in front of this house; it has been dying for years, and the trunk is so hollow that there seems little left, excepting the bark; still, at this season it *looks* as strong as any tree, though the first hard storm will probably blow it over. But let us change the subject: How charmingly Ella Farnsworth is looking to-night! White silk tissue and cardinal ribbons; I never saw her more becomingly dressed."

"An! young Romanoff seems to grow handsomer as that sun gold that he imagines is hair, grows longer; he and Miss Ella set each other off admirably, he so blonde and she such a decided brunette. Some of the fellows wanted Romanoff to appear in court dress and wear his Russian orders, but he said no, he wasn't going on exhibition, and such a rig was too *bizarre* for anything but a masquerade."

"And showed excellent sense in saying so," replied Mrs. Gordon approvingly; "no real gentleman enjoys making a

spectacle of himself; oh, Tom! birth, blood and breeding—the three B's, I call them—never fail to show themselves. How that little witch, Lettie, is enjoying herself! She's going to dance with Harry, I see. This is her first large party; her mother hesitated about letting her come, but Jennie quite insisted. What time is it, Tom?"

"Ten minutes to twelve, and they are getting ready to dance the old year out and the New Year in; see! they are forming on for *Les Lanciers*."

"Tom Hudson, you're an American—at least, your parents and grandparents were all Americans; so please to have the grace to say 'the Lanciers.' I speak French myself, but I detest French phrases in English conversation."

"I stand corrected, my dear madam, and I suppose there would be no use in inviting you to dance?"

"Yes, there would," replied this aged and eccentric lady, as she rose, and gathering her long train with a practiced movement of the right hand, she laid her left upon Dr. Hudson's proffered arm; "it's a long time, Tom, since I danced the old year out, and I should like to do it once more."

Dr. Hudson, accordingly, led his hostess to the head of the first set; opposite were the prince and Ella Farnsworth; on

DR. HUDSON, ACCORDINGLY, LED HIS HOSTESS.

their right, Clarence, with Miss Jennie Gordon, and on the left the boy, Harry, and Lettie; the orchestra was tuning up preparatory to playing the "Boston Fifth."

"We're among friends, at any rate," said the doctor gaily, "but we haven't much time to lose; here comes Mr. Farnsworth with a big letter! I wonder what's up?" for the lawyer, entering from the hall, and looking a trifle anxious, made his way hurriedly to where the prince was standing, and handed him the letter.

"The office boy brought up the mail," he said, "and, as this is evidently from Russia, I fancied it might be of importance."

The prince had turned a trifle pale at sight of the letter, and the hand which held it trembled visibly as he glanced hurriedly at the superscription. "It bears the seal of the secretary's office," he said, "and is probably of very great importance, at least to me; so, with your kind permission, Mrs. Gordon," he continued, with his never-failing courtesy, "I will relieve myself of suspense."

"By all means," replied the ancient lady with an unwonted earnestness of manner, "and if your letter contains good news, as I trust it may, pray let us have the pleasure of sharing it."

The prince, accordingly, broke the great, oval seal and drew forth the letter, which seemed written upon parchment. "It is from Poloffski," he said, turning to Clarence; I did have a presentiment, after all." He glanced rapidly through

the few lines which the letter contained, and then, translating as he went along, read aloud as follows:

"TO HIS EXCELLENCY PRINCE IVAN ROMANOFF:—His Imperial Highness has been graciously pleased to command that your excellency be instructed to return to Russia at such a time as shall seem most fitting to your excellency. A special courier has been dispatched with an imperial order commanding the return to court of their excellencies your father and your mother."

It has been clearly proven, and to the satisfaction of His Imperial Highness, that the family of your excellency was in no way concerned in the political conspiracy of which they stood accused. The real conspirators are now in custody, and await such punishment as it may please the inexhaustible clemency of His Imperial Highness to command.

I have the honor to be your excellency's most humble and obedient servant.

SERGIIUS POLOFFSKI.

BY ORDER OF THE CZAR."

As the prince finished reading, the first violin sounded a warning note.

"Wish you all a happy New Year! All ready! Start with the music!" shouted the leader. "First four forward; forward again and swing opposite lady!"

"My dear prince, I congratulate you with all my heart," said Mrs. Gordon, as in the second change the two clasped hands and swung slowly around. "I have been in Russia, and so understand, perhaps better than your other friends, all that this letter must mean to you."

"Thank you, my dear madam," replied the prince, with a grateful pressure of the hand. And the clock struck twelve.

The Lanciers came to an end; Dr. Hudson led Mrs. Gordon back to her sofa, and Ella Farnsworth, still leaning on the prince's arm, strolled slowly across the dining-room and into the conservatory.

"I'm glad you're so pleased, Ivan," Ella was saying. "Of course it's most unpleasant to be suspected, especially of political plots. Hark! who is that the other side of the palms?"

"Your hopeful sister and young Harry Gordon, pretending to flirt," replied the prince, who, from his superior height could look down upon them over an intervening screen of dwarf palms. "Just listen and be edified."

"Now, Harry," Lettie was saying, "what's the use of coming to a grown-up party unless we act like grown people? Let's be like Miss Edgeworth and Mr. Sedgwick; you call me Miss Farnsworth and I'll call you Mr. Gordon, just for to-night, you know."

"All right, Lettie. But, no—I'll call you 'Miss Letitia'; you know you won't be Miss Farnsworth until Ella is married."

"Oh, Mr. Gordon!" exclaimed Lettie, instantly assuming her role and adopting a tone and manner which Ella recognized as Miss Edgeworth's very own, "you mean kindly, I'm sure, but the merest mention of my sister's marriage touches a very tender spot in my heart." Here Lettie sighed deeply. "My own and only sister!" she added, sentimentally; "if the wide ocean is destined to divide us, how shall I ever endure it?" This last outburst was a quotation from Beula N. Bray's last novel, but Harry did not know it.

"My dear Miss Letitia!" he cried, with the air of a Chesterfield in miniature, "what a thoughtless wretch I am, and how can I ever apologize for so wounding your feelings? And yet, Romanoff is a splendid fellow; everybody likes him."

"Yes," Lettie assented, in a plaintive tone, "dear Ivan"—he has requested me to call him by that name, and I could not well refuse—dear Ivan is unusually well spoken of; I myself entertain the deepest respect for him. Did I ever tell you, Mr. Gordon, that I was the first

person except papa that he took into his confidence and trusted with the secret of who he really was?"

"You never did, Miss Letitia. Pray favor me with an account of the interview."

"At another time, Mr. Gordon, I will do so with pleasure," with some reticence of manner, for Lettie suddenly recalled that the part played by her in the affair of the wig was scarcely in keeping with a "grown-up" character; "dear Ivan was very kind," she continued, "very considerate in every way; still, the sudden revelation was rather harrowing to my—my nerves. By the way, Mr. Gordon, do you understand that the great International Match has been given up?" Here Lettie made a graceful gesture with her morsel of a fan and looked up at him, with Miss Edgeworth's favorite expression, that of polite though languid interest.

"Not given up, Miss Letitia, only postponed indefinitely. Shall we return to the drawing-room? they must be about ready to dance again."

"What an enthusiastic dancer you are!" cried Lettie, with an artificial little laugh that would have startled Miss Edgeworth, it was so like her own. But Lettie preferred dancing to eating at any time, so she took Harry's proffered arm, and the two children left the conservatory.

"Oh, the little goose!" exclaimed Ella. "Did you ever hear such idiocy?"

"The child is a born little actress," replied the prince. "I only wish Miss Edgeworth could have heard her."

"But we were talking of your letter, Ivan; I'm not sure that I understand the full purport of it."

"It means a great deal, my dear, to me, and to you also; it means that my father and mother may return from Tomsk, in Siberia, and spend their declining years in their own land; it means that the great Romanoff estates on the Volga are all restored to us, or soon will be, by order of the Czar, who, as you know, is an absolute monarch; it means that I am no longer a fugitive and an exile, but a Russian nobleman, an heir to great wealth, and first representative, after his excellency my father, of our branch of the great Romanoff family, than which there is none more noble in all the holy Russian Empire; it means that even the shadow of dishonor has been removed from our ancient name; that I am no longer a friendless wanderer, and that you, my darling, may become a princess of the house of Romanoff whenever you will."

Two white, strong hands clasped both of hers; the golden head, so perfect in the gleaming splendor of its beauty, bent close above her, and the gray, northern eyes meeting the dusky brown ones, shone with a prouder, fonder, happier light than ever before.

"Oh, Ivan," she said earnestly, "it is like a dream. To think that I, little Ella Farnsworth, an American girl, born and reared in an obscure village, should owe so much of my New Year's pleasure—of my whole life's happiness—to the Czar of all the Russians!"

"Yes," he cried gaily, "we are forced to be happy, you and I, 'by order of the Czar'—it is a phrase to conjure with." So saying he raised both hands to his throat, and presently drew from below the collar something that flashed and sparkled as only diamonds can.

"It is the Romanoff necklace," he said, as he held it at full length before her wondering eyes—a double row of brilliants of the purest water, graduated in size and culminating in a very monarch of diamonds. "The Romanoff necklace," he continued, "is famous, even in Russia, a country abounding in

CLYDE WORKS, BIRMINGHAM, ENG.

AMERICAN SKILL BEATS the WORLD.

But we are not going to make a long story of it; it needs no argument for the most of us. Look at the cycles made in this country to-day, compare them to all foreign productions in every detail, if you will, and then let the American Eagle shriek while the wheels of industry hum.

But why not put American Tubing on them? Possibly you did not know it; then we will tell you. You can now get what is considered to be THE BEST COLD DRAWN SEAMLESS STEEL TUBES EVER PUT IN A CYCLE. Such Tubing! To say they are unparalleled don't half tell it all. Why, thick walls on a tube don't make it strong. It's the stuff that's put in 'em, and the process of making that weaves the strength in them. Thick walls on a tube make weight—just what you want to avoid. Strength and lightness is what you have been reaching for. Can we do it—well, try us. Yes, any size, from two inches in diameter down as small as a human hair. Hollow wire if you need it.

If you will tell us your wishes, and say quantity wanted, and sizes, we will cheerfully send you prices of the best tubing on earth.

jewels; from mother to son, from son to mother it has been handed down for centuries. Twice the stones have been re-set, twice the necklace has been stolen, once lost, but always it has come back to us. It is said that the fortunes of the Romanoff's depend upon its safety, and in all my wanderings it has never left my person, day or night. Will you wear it, Ella?"

He clasped it about her slender neck just as the orchestra within struck up a waltz.

"The Thousand and First Night," she said, as the first bars reached her ears; "how odd that they should happen to play that piece! For this is an Arabian night, Ivan, and I half expect to wake up presently."

"But, dreaming or not," he replied, as he led her back to the drawing-room, our marriage need not be 'indefinitely postponed,' like that other affair, and, Harry and Lettie to the contrary notwithstanding, there will be an international match, after all."

THE WHEELMEN'S PARADISE.

Rochester has 4,500 Cyclists, Including Some 300 of the Fair Sex.

Famous for its flour mills some years ago, Rochester was appropriately called the Flour City, but this industry becoming larger in Minneapolis and other western cities, and the fact that the extended propagation and culture of flowers was earning Rochester a national reputation, she discarded the appellation of Flour City and was in turn christened Flower City. Time has now arrived for the adoption of another suitable name, and because of the revolution in bicycling many of our citizens suggest calling this city the wheelmen's paradise.

Seriously, this would be a fitting name for this municipality of 150,000 inhabitants. The wheelmen do not yet quite own the town, but they are fast coming to it. Aldermen, supervisors and other city officials, besides clergymen, lawyers, physicians, merchants, commercial men, etc., are now classed as "bicycle fiends," and Mayor Curran will be with us after the next yule tide.

"In union there is strength" is a trite saying, therefore, being backed up by the city legislators, the wheelmen are anticipating the time when an overhead bridge will be erected for pedestrians, so that exclusive use of the sidewalks will be accorded the riders. There are about 4,500 riders, including between 200 and 300 of the fairer sex, in Rochester. Lacking a few, there are 4,000 wheels registered in the city clerk's office, and inasmuch as the ordinance is not enforced there are at least 500 which are not registered. All of these riders thoroughly appreciate the many advantages for wheelmen in Rochester, which no other city in the union gives its bicyclists. First and above all other concessions is the privilege of riding upon the sidewalks, except upon a few prescribed streets in close proximity to Power's building, situated at the Four Corners. Second, the wheelmen are not forced to

carry a bell, for it has proved to be a nuisance. Third, the wheelmen are not obliged to carry lanterns at night. All these and many other reasons combine to infuse life in the trade and make this the greatest wheeling center in the United States. The many summer resorts in and around Rochester, and the approaches to them, tend materially to increase the number of riders.

Socially, Rochester is pre-eminent in the cycling arena. Harmony and good fellowship characterize the small army of cyclist owners, and between the members of the thirteen different clubs, and the unattached wheelmen as well, the best of friendliness prevails. Receptions, dancing parties, banquets, smokers, etc., help to pleasantly while away the winter period, while during the balmy days of summer the wheelmen find supreme enjoyment in road excursions, century riding and racing.

Of the latter invigorating pastime the local boys have witnessed considerable during the past season. On June 15 was held the spring circuit races here; June 25 the Rochester Athletic Club races; Sept. 12 the Ramblers' open tournament; in July and August a series of six road races under the auspices of the Ramblers club; in August and September a series of six road races by the Genesee, and in the latter month a series of three road races by the Crescents.

Devoid of facilities for training, and being obliged to pay their own expenses, the Rochester racing men, in the face of such adverse circumstances, participated at different meetings with most creditable results. The winnings of our eight best men place them in rank as follows: William Le Messurier, William M. Conolly, C. J. Iven, F. T. Servis, Fred H. Smith, C. H. Conolly, George M. Taggart, Frank F. Kammer.

Turkish Baths and Training.

Gradually racing men, as well as other mortals who have to take a bath occasionally to keep in practice, are beginning to acknowledge that a Turkish bath is material, or rather a part of the bill of fare, in training. A few years ago the racers held aloof from them as they would from an infernal machine; but time brings many changes, and here is an applaudable transformation for the better. The bath purifies the blood and promotes the nutrition of the ill-nourished, increasing the appetite in proportion as it increases the power of appropriation. Many ailments are cured by the Turkish bath, and the massage effect upon the muscles is wonderful. Prof. James Bar: calls the muscles "the great furnace of the body; in them oxygenation largely takes place, and the effete materials are burned off." If the muscles are run down and there is no spare nerve energy to make them work, then one must supply the place of the nerve current by massage and electricity. Massage is a most powerful agent in effecting nutritional changes, and with the increased combustion and greater supply of food, not merely the muscles, but also the heart and every organ of the body are nourished, and nerve energy is stored up for future use. The writer of this article was himself run down last season. His muscles lacked the strength and elasticity, and his stomach troubled him considerably. Going to the bath he was "doctored" up. Since then this feature consists of part of his training for races.

The Flying Virginians are no longer a club. Trouble arose over a club house which led to disbandment. Some of the members joined the Richmond C. C., a flourishing organization of about 100 members, with headquarters at 806 East Grace street.

The field of racing, from the standpoint of the ambitious novice, is a haze of glory, thickly interspersed with diamonds, watches, bicycles, pianos, etc., but to the racing man of two or three years' experience, it assumes a different aspect. The latter finds that there is more to be done than merely, in the words of a cycle scribe, "getting on his wheel and wiggling his legs for a certain number of minutes and seconds." There must be a preface of work, and conscientious work, too; not a ride now and then when one feels so disposed, but a routine to be followed systematically. This does not mean exhaustive riding, for I believe in too little training rather than too much.

When the spring comes there is danger of over-work, for a man can not then gauge his power. I remember that last spring I took long rides at the beginning, over-taxing my powers, and soon found that I must cease or my system would become weakened; for three or four weeks afterward I did about one-fourth of my previous work. In athletic circles there is not sufficient attention paid to the subject of over-training, and as a consequence there are several deaths recorded among prominent athletes.

When cycling was in its infancy it was comparatively a matter of ease for a man to win races if he trained conscientiously and devoted himself to the sport, but in these days when novices win in time better than 2:35, and hardly a race meet is held without some record being broken, it is vastly more difficult for a first-class man to win even occasionally;

and as for winning race after race under every condition of track and weather and the pick of the country arrayed against him, but one man has shown himself able to do this—he who is justly named the premier.

I consider success to be rather the result of training than natural ability; occasionally, however, some phenomenon appears upon the athletic horizon who sets all rules of training at defiance and astonishes the world, but these are exceptions, and it is not exceptions but the average man with whom we are dealing, and such must prepare themselves by careful, judicious training.

To attain any prominence among racing men it is necessary that a certain amount of hard work should be done, besides that one must favor himself in regard to sleep and diet, and this entails much self-abnegation. While he is engaged in it he must give it his whole at-

tention. One cannot think of business and racing at the same time; they are incompatible and do not harmonize well.

Racing is very alluring, it is highly fascinating to an able-bodied, healthy man. It is said that a love of strife lies in the breast of every man. A spirited contest affords the keenest enjoyment in my experience. Besides, if one is fortunate enough to win, there are the prizes. I have never been able to understand why solid silver is stamped "triple plate" and "Britannia;" why solid gold (?) watches tarnish after a few months wear. This is no reflection upon the very few who do give bona fide prizes.

A great source of discomfort to the racing man lies in traveling about to the various race meets. If one is in the pink of condition, six or eight hours on the train will often "throw him off" for two or three days. However, such discomforts are usually compensated for by the cordial welcome which most wheelmen extend to visitors.

Centuria.

This season has seen the greatest number of wheelmen afflicted with centuria, and at one time it became quite epidemic, so that the name centuritus, might very aptly be applied to the then existing state. This malady made its appearance on New Year's day, 1892. It attacked very many wheelmen and threatened to be quite severe, but owing to certain circumstances, such as mild weather and the sudden softening of the roads, the paroxysm was very light and produced no untoward results. But as soon as the fine weather sets in, everywhere one reads accounts of attacks more or less severe. This trouble has a strong liking for all wheelmen, and especially for those who are well nourished and are rather fast. It attacks them without regard to age or condition of life. In fact, we have seen some very severe cases developed in many gray haired individuals, but happily these cases were of short duration. Many ladies have at times been afflicted with light and short paroxysms without producing unpleasant results. Often the trouble would attack quite a number of wheelmen at the same time, and at such times the results were quite appalling. We are confident that Buffalo and Chicago carry the banners for the severity of these attacks of centuria. Two young men in Buffalo, Klipfel and Foell, have made no less than twenty-nine and thirty-two centuries, respectively, while they have to their credit four and five double centuries, respectively. There were more centurians in Chicago but they have no such score as the Buffalo men. Newman, Spooner, Porter and others have in the neighborhood of thirty apiece.

Harber Bros. Company are continuing to import the Raglan, and expect from present indications to place a large number of this make during the coming season. Several traveling salesmen are already out with samples. The wheel comes to them this year built to their own specifications, and without tires.

THE Canadian cycling season of 1892, ushered in under most favorable auspices, has followed out in the wake of the seasons that preceded it in an emblazonment of glory. Early in the previous winter it was conceded that the year, now almost at an end, would be an eventful one in cycling annals the world over, but the impetus given the sport in the Dominion during this period has surpassed even the enthusiastic predictions of those people whom ordinary mortals are pleased to class "bicycle cranks." From its opening, with the formation of the Century Road Club of Canada, to its closing, with the remarkable hundred-mile performance of David Nasmith, of Toronto, the past season has been productive of numerous successful race meets, cycling surprises on road and track, and astonishing record-breaking feats. The year has given us an increase in open tournaments in the province of Ontario alone of from three to sixteen, not to mention the thirty odd bicycle races held in connection with the county fairs and society demonstrations. Outside of Ontario the increase in race meets has not been great, though cycling is making wonderful strides in popularity throughout the length and breadth of the land.

* * *

A tremendous impetus was given long-distance road riding at the very commencement of the season, by the agitation for the formation of the Century Road Club of Canada, an organization comprising within its ranks the hardest and swiftest road scorers in the Dominion. This club was formed in Toronto on February 5, with the laudable object of encouraging road riding, recognizing and establishing road records, relay rides and road riding, and agitating road improvement. The timely formation of this organization was accentuated at once by the claim of Nasmith, made the following day, for the first century bar of the club, he having started out and completed his first century within thirteen hours of the organization of the club. Nasmith maintained his proud record of king centurion by keeping well in the van of the century makers. He now leads, with seventeen bars to his credit, and declares that before the year is rung out twenty gold bars will adorn his person. The century record on the road has been made and held alternately since the inception of the club by D. Nasmith, W. Thomas and G. F. Stephenson, all of Toronto. The record at present is 6 hours 39 1-2 minutes, over a selected road, by George F. Stephenson, a member of the Toronto Bicycle Club, and a very clever road rider, indeed. The chief centurion of the Century club is Fred J. Bruner, a veteran road champion, and at one time a track-flyer of no mean ability. The wide popularity of the club is evidenced by the fact that many century bars have been earned by riders as far east as Quebec and the maritime provinces, and as far west as British Columbia. This in the face of the fact that the year has been unfavorable for century making, owing to the amount of rain in the fall

and spring months and the consequent wretched condition of the roads.

* * *

Road racing always has been a popular pastime of Canadian cycling clubs, but beyond local handicap events no attempt has been made, previous to this year, toward organizing a big open road race similar to those held annually over the Pullman, Irvington-Milburn and other courses to the south of us.

A leading Toronto newspaper, that for the past two years has made cycling a special feature of its sporting column, noting the large number of Canadians entered for the road race at Buffalo, and being aware that others were spoiling for a race but were unable to go far distant to participate in one, went quickly to work, and on May 9 announced that arrangements had been completed for a grand national road handicap to take place June 11. The announcement was received with enthusiasm all over the country, and when the lists closed three weeks later over sixty entries had been received from all parts of the Dominion. Despite the fact that for the fortnight preceding the race it rained almost incessantly, and that a strong unsportsman-like and ungentelemanly opposition was brought to bear upon the event, the race resulted in all the eclat and success imaginable. There were forty-four starters, thirty-seven finishers, and the course throughout was lined with thousands of wheelmen and citizens. This set the ball-a-rolling, and smaller road races were gotten up all over the country. The Toronto Wanderers and Athenæum bicycle clubs of Toronto each held a series of road contests; the Hamilton club did likewise, and several well-conducted road races were held by the clubs in northern, eastern and western Ontario, those between Newmarket, Barrie and Orillia, and between London, Sarnia and Stratford perhaps attracting the more attention next to the "Queen City handicap." The good result followed of bringing to the front many first-class road riders who otherwise might be under the proverbial bushel. Some of these debutants afterward developed into good track men, and next season I confidently expect to see one or two of them in championship events.

* * *

The great track events of the year were the tenth annual meet of the Canadian Wheelmen's Association in Kingston on July 1; the annual tournaments of the Hamilton B. C. on August 8; of the Toronto B. C. on August 13 and 15; of the Sarnia B. C. on August 17 and 18; of the Montreal B. C. on August 29, and of the Wanderers B. C. in Toronto on Sept. 24. These, together with the first Seaforth meet on Aug. 5, Newmarket on Aug. 24, Kingston on the 29th, Stratford on the 31st, St. Catharines on Sept. 9, the second Seaforth meet on Sept. 16, the meet in Morrisburg, the London Wheelmen's tourney on Oct. 15, and the Thanksgiving day meet of the Sarnia B. C. on Nov. 10, made a circuit of provincial race meets that kept our racing men in constant training and practice. The

prizes given at these tournaments were much costlier and more attractive than any heretofore offered in the Dominion, and naturally they wooed into the field many incipient champions who previously had been content to be numbered with the spectators at a race meet. Whereas in former years two or three racing men enjoyed a monopoly of the best things at the two or three open race meets, this year new stars were encountered in every contest, and no race was won until it was done. The average number of starters in a race jumped in one year from five to nine at the big meets, and from about three to about six or seven at the smaller tourneys. This, together with the increased speed, improvement in tracks and equality of wheels, has made the racing generally keen, and as a result bicycle races are fast becoming exceedingly popular in Canada. Several of the season's meets had each an attendance of three thousand or more, and on the second day of the Toronto's tournament nearly five thousand people were present.

* * *

An encouraging feature of the big meet this year has been the ability of Canadian racing men to win prizes from some of the fastest of the American cracks. The time is not long past when a flyer or two from Buffalo or Rochester would run across to a Canadian meet and carry off nearly every first prize on the board. The recent work of our best racing men demonstrates that a new era is at hand, and that United States cracks must come prepared to do severe battle when they make invasions on our bicycle tracks. As elsewhere, all the principal racing men in Ontario—and there are exceedingly few racing men in Canada outside of Ontario—are connected with the bicycle trade. So it is that many of our races are really contests between makers and between wheels, but the general public being in blissful ignorance, this state of affairs detracts nothing from the interest taken in the sport.

* * *

Of our racing men none has done better work nor performed greater deeds than G. M. Wells, the present holder of the one and five-mile Canadian championships, the three-mile Provincial championship, the records for quarter, four, five, six and nine miles. His other notable achievements were his victory over Palmer and Carman in the ten-mile invitation race at Hamilton, his winning seven of nine open races at the Toronto Bicycle Club's tournament, beating out Zimmerman from short handicap allowance, and his defeat of H. C. Tyler from scratch in the quarter-mile race with flying start, at the Wanderers' tournament. His best time for one mile on a Canadian track is 2:25, made in practice and without pace-makers; but in a private trial at Springfield, Mass., in September, he is credited with making a mile in 2:14. In this he was paced by Zimmerman. As this was the second year only of Wells' racing career, his friends confidently look forward to a glorious record of triumphs for their favorite champion in 1893.

* * *

Another Canadian champion from whom great things are predicted to follow next year is Will Hyslop, of Toronto, holder of the half-mile championship, and a young rider who has pushed the very best American riders to the tape in every race in which he has encountered them, in not a few of which he has led them over the line. A list of his victories in the past season would entail too much space. He has competed in every Canadian meet of importance, and that he has been eminently

successful a large store window full of magnificent and costly prizes—first prizes greatly predominating—bears abundant evidence. He will start next season with an excellent trainer and every possible advantage, and it is safe to assume that if nothing unforeseen happens he will close the season as one of the recognized cracks of the continent.

W. M. Carman, holder of the three-mile Dominion championship and winner of the C. W. A. twenty-five mile road championship, was looked upon at the commencement of the season equally with A. W. Palmer, of Hamilton, as the most formidable Canadian on the track. His records and work of the previous year fully warranted this belief, but after the association meet, on July 1, he seemed unable to get into shape, and though at times he acquitted himself brilliantly, his later work has not come up to the early expectations of his friends. Still, outside of Wells and Hyslop, no other Canadian has been able to successfully cope with him, and not a few United States riders would now be possessed of coveted trophies had not Carman been the "snag" in their path.

E. J. P. Smith, sometimes called "Alphabetical" Smith, started the season an unknown quantity, and virtually ended it the same way. This is due to the fact that he showed remarkable speed in his training in the spring, that he was unfortunate in the few subsequent races in which he started, that by the advice of his physician, he was off the track during the heart of the racing season, and that when he resumed the path late in the year he was most successful, but unfortunately met few of the recognized champions. He is a remarkably strong rider on both road and track, and with a cultivation of the much-desired "sprint" he should be "in it" with almost any of them next year.

A. W. Palmer, the safety champion of 1891, Canada's premier long-distance road rider and the pride of Hamilton, traveled in exceedingly hard luck during the year. Commencing by attempting to defend the championship when in a comparatively untrained condition, and following this up by competing in his own city when he was plainly a sick man, he was discomfited and disappointed at the start, and so retired from the track for the season. One noticeable achievement he performed, however, when he won the first time prize of the "Queen City handicap" road race over a half-hundred of the strongest road riders in the country. Next year he will be out again, and it is the hope of all that he may be enabled to resume his place in the van of Canadian champions.

Of other racing men, those most prominent in the big meets are D. Nasmith, the champion long distance rider on road and track; E. O. Sliter, of Kingston, who made a sensational debut, the promise of which he was unable to maintain; F. H. Skerrett, of Hamilton, one of the fastest men in the country for a half-mile; C. Bews, J. G. Gould, A. Wise, R. B. Griffith and W. Nichol, promising young Hamiltonians; C. Schultz, Essex; J. McKay and A. McMahon, Kingston; G. S. Lowe, J. W. Tatley and D. S. Lonson, Montreal; Dr. Robertson, R. R. McFarland and I. B. McCarthy, Stratford; S. Hitchcock, H. Watson and E. R. Everett, Sarnia; C. Manville and J. and C. H. White, London; R. Jaffray, H. Lowe, J. Miln, J. F. Decks, C. McGuillan, F. Gillott, L. D. Robertson, S. H. Gibbs, D. F. McGuire, F. Beudelan, W. G. McClelland and W. C. Power, Toronto; H. Daville and W. Lloyd, Aurora. These men will almost

and clubs now in existence are hinting at "dark horses" to be brought forth next year. Several big road races are promised, track races are sure to multiply, and the general public is catching the enthusiasm from the columns of the daily press. Keep your eye on Canada in 1893.

JAN GERL

Interesting Items.

A. A. Billingsley, of Springfield, vice consul of the Illinois division, read a very interesting paper on good roads before the Sangamon County Farmers' Institute on Thursday last. The paper showed that Mr. Billingsley had thoroughly studied the question. The paper provoked a lively discussion. B. V. McVeigh, John W. Dalby and O. F. Stafford talking in favor of the ideas advanced by Mr. Billingsley, while the tenor of Dr. A. L. Converse's remarks was less favorable.

The Columbus (Ohio) C. C. has nomi-

1893 will be a great year with us. Manufacturers and dealers are enlarging premises and securing new agencies. It is reported that at least three new machines will be handled in Toronto next year. The flyers already are giving orders for new racing machines and otherwise preparing for great contests that they know are surely coming. New bicycle clubs are forming all over the land,

all be out next year with new racing wheels, and with proper training, so the outlook certainly is promising.

Probably the greatest individual performance of the year was the one hundred-mile record ride of D. Nasmith on the Rosedale track, Toronto, on Sept. 29 last. Assisted by pacemakers he rode the entire distance with a single dismount and gave us a table of Canadian records for all distances from ten to 100 miles inclusive. So far as I have been able to ascertain, his time for the distances over fifty miles are also American records. Mr. Nasmith has proved himself one of the fastest of long distance riders on the continent, and it is not unlikely that next year he will enter the principal road races to the south of us. Nasmith's records will be seen in the table of Canadian records given below.

* * *

Following are the classes to which some of our principal racing men are entitled to belong:

2:25 class: G. M. Wells, W. Hyslop, Toronto.

2:30 class: W. M. Carman, Toronto.

2:35 class: E. J. P. Smith, Toronto; F. H. Skerrett and C. Bews, Hamilton.

2:40 class: D. Nasmith, J. Miln and H. Love, Toronto; A. W. Palmer and R. B. Griffith, Hamilton; E. O. Sliter, Kingston; R. R. MacFarlane, Stratford; C. Schultz, Essex.

2:45 class: L. C. Robertson, S. H. Gibbons, F. W. Gullett, C. McQuillan, F. Bendelari, Toronto; W. Nichol, Hamilton; A. MacMahon, Kingston.

2:50 class: D. F. McGuire, F. W. Doll and W. C. Power, Toronto; G. S. Lowe, D. S. Lonson and J. W. Toley, Montreal; T. McCarthy, Stratford; J. McKay and L. Hughes, Kingston,

The Canadian records, all made during the past season, are as follows:

THAT is what I always call her—my Christmas wife. Please do not imagine that I hail from Salt Lake City, and have a wife for every season of the year, and two

in the summer, because you would run away with a wrong impression. And please don't anticipate that midnight maraudings, and ghosts, and spectres, and hobgoblins, and all that kind of uncanny creatures, are going to chase wildly over this paper, because they aren't, and you don't want any erroneous notions in your head. Erroneous notions are the stock in trade of politicians, and we are not politicians; we are cyclists and superior creatures.

It was only last night that I was looking at a photograph on our mantel, and that photograph tells, as well as any mere picture can, the way that led to matrimony being committed between the wife and myself. And yet you would never guess the story by looking at the picture. All that is shown is a tandem tricycle—one of the early sort, with solid tires—and on board it are two young men, to whom I must beg to introduce you. The first is myself, and I place myself first because I am on the second seat, so the only chance of getting ahead is by going there of my own accord, having first obtained my own permission to go. The other is my old friend Tom Horton, whom I always call T because he drinks nothing but coffee. Still, you would hardly recognize him by his description, so I will beg to introduce you.

The Reader—Mr. Tom Horton. Mr. Tom Horton—the Reader.

There! now you know one another, and the introduction is over. I hate introducing people. Something always seems so stiff and formal over the introduction business. It is like the average preface to the average book, and very much below the average, accordingly. Still, we are great sticklers for formality, we English, and that is why there is such a big sale for red tape. We always fight very shy of people to whom we have not been properly and formally introduced.

I knew a nice little girl once. She went down to the seaside one summer, and a combination of circumstances prevented any of her folks going along. She was lonely, but by chance she met a nice young man, who made himself most agreeable during the whole of her stay. The acquaintance continued, and after a while the couple became engaged. Time went by and the wedding day was fixed; but on the very evening before the celebration of the nuptials an intimate friend of the young man chanced to call at the girl's house and interrupt a most interesting *tete-a-tete*. Seeing that the caller was an old friend of the young man, the lady took the opportunity of going into another room with her fiancé's chum, and there was a long confab between the two.

The soon-to-be-married young man kicked his heels together with much impatience, and after a while he was astonished to see his affianced bride come

into the room upon the arm of his friend. Before he could say anything the pair walked across the room and the caller, with considerable formality, introduced the lady to her husband that was to be. When the visitor had departed the young man inquired diligently into the reason of the whole affair, and the young lady replied:

"You know, my dear, we only met at the sea-side, and it was really too much to think that I could ever marry a man to whom I had not even been introduced!"

But I am not telling you about that tandem. In the first place, it wasn't my machine. It belonged to an old friend of mine who hadn't found much use for it since he had started a perambulator in the establishment, though it had done excellent service in his courting days. In order to use that tandem whenever I might choose, I had been provided with an open permission and a key to the stable where it was kept. Now I don't want anybody to think that the path

I WAS LOOKING AT A PHOTOGRAPH.

between my house and the stable of that tandem was any way near worn out, but at the same time it was pretty frequently trodden, just enough to prevent it from being moss grown; and the stable door was opened just frequently enough to prevent the hinges getting rusty.

It was a very modern machine when it was first constructed, for, unlike most of the tandems of two or three years back, the rear rider controlled the steering.

One evening in the summer, two years ago, T and myself were out at a jolly party given by the owner of that tandem. The prettiest girl in the room was Dora Hughes, and it was not long before we were both presented to her. There was no mistake about it, we both considered her simply charming, but I must not enlarge too freely on her merits in case she sees this, for then there might be slight ructions. She would want to know why I don't tell her to her face what I think about her, instead of taking the trouble to write it all down for the benefit of people thousands of miles away. Then of course I should have to say that I have said it all dozens of times, and fear its constant repetition

might become more than a trifle monotonous; so I am giving those people thousands of miles away some little insight into the benefit to be derived from personal acquaintance. Then all will be peace again.

Before we had known the fair Dora—by the way, she was dark—half an hour we were both in love with her. "Who ever loved that loved not at first sight?" says old Christopher Marlowe, and he cannot be very far out. Shakespeare—let's see, he's an American writer, I fancy—quoted this truth, so there must be something in it, as the fellow said when he smelt the egg.

Well, there is no denying the fact that we were both deeply wounded by the darts of mischief-making cupid. Love is a curious disease. It baffles the will of the cleverest physician, and marriage is the only known specific. We paid all manner of little subtle attentions to her, as is the custom of those stricken with love sickness; and though neither of us ever mentioned her name, yet the endeavor of each was plain to the other, and there was a sort of unspoken but tacit understanding between us on the point.

The days passed and the December nights lengthened out until the arrival of Christmas eve. In the afternoon of that day I called on friend Tom, suggested that we should go for a ride on the morrow, get some holly and good appetites, and be back in time to partake of a hearty dinner. To this programme he eagerly consented, for we were not of the sort to be either weary or wan because crossed in love. After leaving Tom I went for the machine. My own had broken down only the day before, and when this sort of mischance happens the next best thing to having one's own wheel is to borrow that of some one else. The easiest wheel to borrow was the tandem, and so I was saved the necessity of making any request. Having got it out and duly oiled up, I went for a little ride alone, because T was busy fixing up Christmas presents and the like, and could not come.

My ride was not of very lengthy duration. About eight miles from home was sufficient for a double machine with only one aboard. There was a cosy little inn that distance away, and of course I stopped there for some tea. Afterwards, with lamps duly lighted, I set out homewards. When about a mile had been covered I overtook a pedestrian, who was ambling along and whistling as if his life depended on it. As I got level with him he stepped on one side and then said: "What yer, my noble." It was a vulgar and peculiar greeting, not the sort of greeting you would extend to a lady, for instance, but I passed that over and wished him good evening and a merry Christmas. "Thank yer cocky," he replied, adding: "Tell us how far I am from Farningham."

"About six miles," I said. Then he said: "Oh, that's all right. Give us a lift, will yer? I see as how you ain't got nobody on the front seat."

I intimated my willingness to do as he suggested, and said I didn't see any just cause or impediment why he shouldn't have a lift if he so desired it. The tandem was stopped, but before mounting he said: "Look here, I'd rather steer, if you don't mind."

That was a slice of impudence, and I plainly intimated that the guidance of the machine would remain in my hands.

"Oh, all right, it don't matter a ha'porth," said my new friend, off-handedly; and then he continued in confidential style, "Yer know, I used to be one of the cracks time back, afore you was a rider, I reckon; and I used to scoop all the pots and things that was

going. This sort of work's a fool to it." I concluded the gentleman had been offering libations to Bacchus, and participating in them himself, not wisely, but too well.

We had covered about three miles, and I am bound to confess that he was back-peddalling nearly the whole way, certainly not riding as though he had ever been on a cycle before. Presently he said, "Quite a distance to Farningham, aint it?"

"Yes, it's a good way," I admitted.

Another mile was covered in silence and then the stranger remarked, "Looker 'ere, what's the game?"

I said I didn't know of any. Then he queried, "Now you jest tell me how far away Farningham is."

We were at that moment passing a milestone on which the light of our lamps shone slightly. I noted the figures and said, "You seem very anxious to find out about Farningham."

He said, "I am; you've hit it. I want to get there."

I said, "Well, if you go perfectly straight ahead for about twenty-five thousand miles you'll reach it all right."

"Who are yer gitting at? Aint we goin' right there?"

"Certainly not, we're nearing London. You only asked about Farningham, I didn't know you—"

Without waiting for me to conclude the sentence, which was very bad behaviour on his part, he jumped from the machine with one yell and tore down the road we had come as hard as ever his legs would carry him.

On the morrow, as duly arranged, Tom and myself set out for our ride in search

"WHAT YER, MY NOBLE."

of holly and appetite. We knew where there was plenty of holly to be obtained from a wood about a dozen miles away, and thitherward we turned our wheels. The air was clear, crisp and cold, and we sped along quite gayly. Then for the first time we spoke of Dora.

"Do you know that Dora is a cyclist?" queried my friend.

"Is that so, really! Well, T, old fellow, we shall be able to have some rides in company. What's her machine?"

"A Humber tri., a regular little beauty. But I guess we'll bar the rides."

"Whatever for, you Juggins? Your name ought to be Dennis, as they say in the States."

"Well, Harold, old fellow, I like you awfully much, but really, I must say that I have a considerable regard for Miss Hughes."

"A nod is as good as a wink, T," I remarked, adding, "and I greatly admire your sentiments, for they are my own exactly."

He affected surprise. He said, "What, you don't mean to tell me that you have any regard for her yourself, surely!"

"Again my boy you express my sentiments to a T."

"Don't joke. It is a serious matter."
"Come to think of it, so it is. Seems as though we were both after the same quarry."

"And I trust that she has not a heart of s'one."

"Now you're joking yourself. Don't do it; the matter is quite as serious as ever it was."

"Come to think of it, so it is."

"Now see here" I interposed a trifle warmly, I must admit, "we shan't do much good by repeating each other's words. Repeating of words is barred out."

"Good. No tautology is the word."

Where we could have got to, had the amicable discussion continued in this

"FASTER! FASTER!" HE FAIRLY SCREAMED.

vein, I am not prepared to say. The point that afterwards struck me in this connection was that neither of us seemed angry with the other. As a rule, the moment a fellow falls in love with a girl, he considers that nobody else has any right to look at her, and the mere mentioning of her name is next door to a felony. But our case was a clear exception to the general rule.

The discussion indicated above came to a very sudden full stop. We were within a mile of the wood where the holly grew and as we swung round a bend in the road, there was the very young lady that we had been talking about. She was apparently returning homeward, and her mission could be guessed by the bunch of holly upon her handle-bar. Of course we slowed up; bade her good morning and wished her all the compliments of the season with a lot more besides. In reply to a question we said we were bound on the very same errand as herself and asked her, forgetting our recent remarks, to accompany us back.

She smiled and said, "Well, I'd rather like to, but you see, I've got to dress for dinner and dressing takes a long while—when you happen to be a woman."

We admitted that as yet we were not inclined to be classed in that category, and so could form but little opinion that should be reliable.

"I'll tell you what," she remarked with sudden inspiration, "you shall go and get your holly and then you shall try to catch me up."

"Oh, we'll do that easily," I said.

"Not so fast, young man," replied Dora roguishly, "I mean to hurry like—like—well, like anything."

Then T mocked her. He said, "And we shall ride like—like—well, like anything else; so we shall be certain to overtake you, because it is manifest that anything cannot go faster than anything else."

"Bet you you don't!"

"We will."

"Oh, but you won't. I bet you you won't."

"What are the stakes to be?" said I.

Women are all gamblers at heart, and they are as ready to stake their all upon

the turn of cards or the throw of dice as they are to play with a man's affections. They can't help it; it is their nature. And this womanish trait in Dora's character was roused. She said, "I'll bet what you like."

"Right," said I, "That's a forfeit, and being Christmas time, we'll take that forfeit out in kisses."

"You're very brave," she said, with just the least touch of irony in her tone. "It isn't often a gentleman speaks of kissing a lady when there's another gentleman present."

"That's true," said T, "but you must allow that as we occupy the same machine we two are one. The links of matrimony don't bind us, but those of the chains do."

"And how if you lose?" queried Dora. "Oh, that's all right. Then we'll pay kisses instead of receiving them."

"Very well," she said gaily, "I'm in a regular holiday mood to-day, and I accept your forfeit. You will meet me at Mr. Russell's to-night to pay. Mind you get the holly."

Mr. Russell, be it noted, was the owner of the tandem.

"Are you really?" said T, in an official voice. He was used to acting as starter. "Then go!" he shouted, and we parted from the fair tricyclist, every turn of the pedals taking us farther apart.

"Wonder if we shall ever catch her?" said T. "It will be like giving her a mile and a half start in about eleven. That's big odds."

"Of course we shall," I replied.

"Not so sure about that."

"Why, can't you see that she is certain to let us? If she wins she'll have to pay in kisses, and that's not modest; but a lady may receive kisses from a gentleman without impropriety."

"In this case it's gentlemen."

"Well, that's only duplicating the single."

"Single for how long? Remember that kisses are dangerous."

"Then we are in great danger," I remarked. "Wonder which of us will come safely through the ordeal," I added, under my breath.

By this time we had arrived at the wood which skirts the roadway, and I never saw holly gathered with more eager celerity. We had brought some string with which to tie up the bundles, but we did not even stop to use it; we simply utilized our handkerchiefs as being handiest.

As we were fixing the holly up ready to start back, I suddenly said, "It's no use keeping up this farce any longer."

"What farce?"

"Pretending not to know the state of each other's feelings toward Miss Hughes. That we are both in love with her is clear."

"You are quite right, old fellow."

"I thought so—indeed, I was sure of it. Now, the question is this, 'What's to be done?'"

"Wait the turn of even's, I suppose."

"See here," I said, with a momentary inspiration, "we'll race for her."

"Don't be a fool! How can we race for her if we're on a machine together?"

"Easy enough."

By this time we had mounted and were speeding merrily on the homeward track.

"Please explain," said T; "short as you can."

"Right. Both pedal our hardest; first to give in loses."

"Good. Off we go."

And off we went. There was no bandying of words or phrases between us now. About each half-mile one of us would muster up sufficient breath to say "Faster," but that was only to make the

other lose heart. Mile on mile went by, and a rider we passed told us afterwards that he thought something strange was in the wind, our faces were both so grave and determined. At last we entered upon the last stage of the journey, but the fair tricyclist was not within sight.

"The last mile," said Tom, "now sprint."

"It was clear to my mind that he was more than my match, but it also occurred to me that he might be thinking the very same thing on his part. We were tearing along across the heath towards our homes, and when barely half a mile remained to be covered we sighted our quarry."

"Sprint, you madman!" shouted Tom, "sprint or we shall lose her."

I did not reply, because I couldn't. The pace had told its tale.

"Faster! Faster!" he cried, and faster still he went. How he felt just then I know not, but I was "all out," and could only wish the machine would break down. How I regretted the mad idea that made me think I could wear him out, and though there had been no code of conditions, yet there was an unspoken agreement that he should forfeit all hope to the girl and leave the coast clear for the other.

"Faster! Faster!" he fairly screamed, but I could make no further effort. I could feel that my senses were ebbing away, and I knew that serious harm would overtake us should the steering pass out of my control. For myself, I would not have cared, but I could not be selfish enough to cause hurt to my old friend through being too cowardly to admit myself beaten.

"No more," I said "I'm done." And with that I lifted my feet from the pedals. But the machine still kept its way, the speed not perceptibly diminishing, and we had the satisfaction of overtaking the young lady scarcely more than a hundred yards from her own door.

At least, Tom had the satisfaction.

"Good boys!" said Miss Hughes, "you have ridden well."

Tom spoke: "We have had the hard-

THERE STOOD DORA.

est race of our lives," he said, and there was the elation of victory in his voice.

We had overlooked one thing. How would Dora regard our race?

"Meet you to-night at Mr. Russell's," said the young lady; "forfeits then."

I don't know where that appetite of mine went to; that it had gone there could be no question. Never do I remember a Christmas dinner in which I took less interest.

Toward evening I got ready to go round to Mr. Russell's. I was putting on my hat preparatory to setting out, and just then a most unlooked-for incident happened.

There came a gentle knock at our front door.

I opened it on the instant and there stood Dora, looking simply charming in her brown furs, and with a bit of bright-berried holly roguishly fastened in her bosom.

"I came for you," she said simply. "As we are both going to Mr. Russell's, I thought you would not mind accompanying me there."

"Nothing would give me greater pleasure."

"Thank you. Very prettily said. And besides, I want to ask you something."

"What about?" I said at once.

"Don't be in a hurry," she replied. "You will gain nothing by overmuch haste."

I wondered whether this was a chance remark or one with a purpose. But I said nothing.

When we reached the street she said: "I am going to ask why you were both so anxious to overtake me, and why, when you did so, Mr. Horton looked overjoyed while you appeared considerably the reverse?"

"You are very quick," I said.

"Perhaps, but that is not the answer to my question. I have a presentiment that there was something mysterious about it, and I ask you, as I have known you the longer."

"We were both introduced to you the same evening."

"I know, but you were introduced first. Please don't prevaricate. The more you do so, the more serious must the matter be."

There was no escape, and I told her the whole story, asking her in conclusion to be as well disposed towards Tom as possible.

"That's honorable of you," she said. "And would it make any difference if I said that I don't care for Mr. Horton at all, while?"

"You do care for me? Can it be true?" I cried eagerly.

"Now you are breaking your agreement with Mr. Horton. He won, you will remember."

I did remember, and my spirits fell with sufficient force to knock a hole in the sidewalk. But the stones were strong and withstood the force of the impact.

We walked along for some time without saying a word. Presently Dora broke the silence with the remark, "The race is not a ways to the swift, nor the battle to the strong."

"That's a quotation, I suppose."

"It is."

"Thank you. That quotation has put my shivers above par."

"Then you consider the quotation is that of something that is in the market."

"I can't go as far as that, you know."

"You had better not, if you value your peace of mind. Remember, I am not to be bought by the highest bidder."

That made two things I had to remember.

Later in the evening Dora, Tom and myself met in the conservatory to pay and receive forfeits. Afterwards Tom came to me looking rather gruesome.

"I've won the race, but lost the girl," he said.

"I'm sorry for your sake, old fellow; but it must be one of nature's compensations."

"That's about it," he said. "But on that theory the winner of a race should be the only one not gaining a prize."

"Which would be very fair. The man who won would have the proud consciousness of winning, while the losers would have prizes to compensate them for defeat."

"A beautiful theory," said Tom. "You lost the race, now go in and take your prize."

* * * * *

"There are three things you have to remember," said Dora, "which may be aptly put into syllogistic form. Firstly, Mr. Horton won the race. Secondly Dora Hughes is not for the highest bidder. These are the two premises, and now comes the conclusion: You have your Christmas wife."

She was always "My Christmas Wife" after that.

CHAT AT LONG RANGE.

ITEMS CONCERNING THE TRADE AND
TRADESMEN FROM ALL QUARTERS.

Information Gleaned From Stray Remarks and Trade Directory Reports Compiled for the Rapid Reader.

The Broncho is now known as Kane's chainless safety.

American-made Swifts should be ready inside of three months.

Rouse, Hazard & Co. expect to introduce a Duryea tire, shortly.

Sulky rigs are made a specialty by Campbell & Co., Providence.

The Chicago Screw Company makes numerous small parts for cycles.

The Connecticut Manufacturing Company will make sundries to order.

Ames & Frost's brief report: "Patterns same, prices same, discounts same."

Hubs and cranks for the trade are among the Sercombe-Bolte supplies.

F. Geisler & Co. are among the new people in the trade at Muscatine, Ia.

The St. Louis Refrigerator and Wooden Gutter Co. makes a cheap boys' wheel.

The Zucker & Levett Company ships goods to all parts of the civilized world.

John S. Leng's Son & Co. have recently added spokes and chains to their line.

Fine moulded rubber work is the specialty of Spinney, Virtue & Co., Lynn, Mass.

Supplies of ball pedals, wheels and rims may be obtained of Wilson, Myers & Co.

The Shaw Cycle Company, of Baltimore, contemplate the manufacture of a wheel.

R. L. Thompson, Muscatine, has the state agency for Rudge and Sylph wheels.

The Grand Rapids Cycle Company is busily engaged on its fourth year's product.

The firm of Townsend Brothers, of Coventry, was established over twenty years ago.

Light safeties are made to order by V. Dugmore & Co. of Boston, dealers in parts, etc.

It is not generally known that McKee & Harrington use wooden rims in the Lyndhurst.

The Lemont lock locks chain and sprocket wheel and does away with the usual chain.

Whitman & Barnes Co., of Canton, O., will figure on drop forgings for high grade wheels.

A. W. Gump & Co. carry over 2,000 wheels in stock and retail in all parts of the United States.

Edwin Mohrig, of 'Frisco, will be in Chicago about Jan. 1, en route to the Philadelphia show.

A concern which professes to make a high-grade bicycle is supplied with cones at two cents apiece!

"Our ladies' machine is the lightest made in America." So says the Monarch Cycle Company.

Houghton & Dutton are handling the Nomad, made by the Beacon Cycle Company, in New England.

The Elwood-Ivins Tube Works people believe they are the only makers of seamless hollow steel wire in the United States. They have offices at Philadelphia, New York and Boston. This con-

cern was formerly the Spring Garden Metal Works.

Lee Bannister, a dealer and repairer at Youngstown, O., has been an active rider for thirteen years.

Immense quantities of the product of the Standard Varnish Works are now used in the cycle business.

W. G. Rankin & Co., of Providence, are making a specialty of fitting cushions or pneumatics to sulkies.

The Stover company says its wheels will be catalogued at a little over rather than under their true weights.

The Bloomington Manufacturing Company has an unnamed youngster to introduce to the market shortly.

The Clinton Cycle Works, Buffalo, make the Globe safety in three weights, said to be 22, 28 and 32 pounds.

Lanz, Owen & Co. furnish saddle seats, tool bags, etc., in large quantities, to jobbers and manufacturers only.

Among the now numerous makers of tires, the Jersey Car Spring & Rubber Company, of Jersey City figures.

I. A. Weston & Co. make nothing but wheels, and these are supplied in any finish and stage of completion to suit.

We are notified that the Cleveland Rubber Company can supply any rubber articles used in the make-up of cycles.

The Kenyon Bicycle Company, of Des Moines, with increased space and abundant capital, looks for big business in '93.

The Decker safety, the production of a Chicago man, is being manufactured by the Berlin Machine Works, of Beloit, Wis.

The Shelby Steel Tube Company wrote us recently that the works would soon be ready to make tapered tubes of any size.

The specialties offered by the Premier Cycle Company are the Premier patent spiral tubing and an aluminum gear case.

The Wilcox & Howe Company, of Birmingham, Conn., makes forgings from samples or drawings, but carries no stock.

The business of the S. F. Heath Cycle Company of Minneapolis and St. Paul, has grown wonderfully within the past year.

By adding 161 to 167 South Canal street to its factory the Derby Cycle Company recently attained largely increased space.

Except that weights have been reduced no great change has been found necessary in the Royal Cycle Company's wheel.

The Buffalo wheels for '93 are: Scorch, thirty pounds, light roadster, thirty-six pounds, and full roadster, forty pounds.

Jordan & Sanders write that they "think a boycott should be placed on any dealer who cuts prices on standard makes of wheels."

J. A. Hunt & Co. make sundries to order, besides carrying on their regular business in leather goods, pedals, ball cases, etc.

"The only reliable light wheel made" is the somewhat expansive claim made by the Keating Wheel Company for its machine.

The Rockford Tool and Sundry Company tells us that it will make almost any tool used in cycle work, "for a consideration."

The forgings made by the Simonds Rolling Machine Company are made by the Simonds patent process. It does not upset the work, but by using a bar of steel the size of the largest diameter and reducing to the smallest by spreading

the metal makes a forging of uniform strength and size.

The material used in G. & J. tires is of the same quality no matter where made. Depots will be established in large European cities.

A specimen of the work of the Speirs Manufacturing Company is the Majestic. The drop forgings are made by J. C. Speirs & Co.

Harry Hearsey, of Indianapolis, has been in business there since '86, and has been connected with the trade nearly fifteen years.

The Revere Rubber Company, with offices in all the principal cities, will be pleased to supply estimates for tires and rubber articles.

The Demorest Manufacturing Company of Williamsport, Pa., claims to make the whole of its cycle except the rubber portions.

Four Planets are produced by the Standard Manufacturing Company, viz.: the light and regular roadster, the racer and ladies wheel.

The Combination Roll and Rubber Tire Company, factory, Bloomfield, N. J., will make to order tires and rubber articles generally.

The parts supplied by the Western Automatic Machine Screw Company, of Elyria, O., are highly spoken of by people who use them.

The Yost Manufacturing Company makes everything in its machines, except the tires, handles and pedal rubbers, from raw material.

Schack, of Buffalo, in addition to handling an immense line of wheels imports Harrison bells, Warwick rims and sundries of all sorts.

The ladies' Clipper, the first strictly ladies' wheel made by the Grand Rapids Company, weighs twenty-eight pounds, according to our advices.

The McIntosh-Huntington Company is importing cranks and Lucas' specialties extensively. A specialty is also made of all sorts of parts.

Poorman, the well-known promoter of the road race which carries his name, is well able to supply wheels of any grade, as well as sundries galore.

The Buffalo Weaving Company makes flat and tube webbings in cotton, linen, or a combination of both, and has a capacity of 10,000 yards daily.

W. T. Robertson & Co. believe the change of administration will have a bad effect on business in Washington, owing to change of office-holders.

The Gibson & Prentiss output is handled largely by the Bison Cycle Company, of 561 Main street, Buffalo. Cheap wheels are carried also.

The Ben Hur output, from the Central Cycle Company's place at Indianapolis, will be largely increased. A ladies' wheel will also be forthcoming.

The Henry Sears Company, of Chicago, importers of the Phantom, express the opinion that the tendency of demand is for high grade wheels.

E. N. Bowen, of Buffalo, the well-known maker of home trainers, etc., makes a light safety, to order only. He conducts an extensive repair shop.

Asked for some details a few days ago, the Revere Rubber Company replied that it had ready two new tires, of which it was not quite ready to explain details.

According to the National Chain-Gear Company that concern makes "a new chain connection which we call a chain-gear, inasmuch as it is practically a flexible internal gear. It does away with all back-lash, weighs no more than any other chain connection, is a self-lubricator, and will outwear any chain

on the market and does not stretch." These are big chains, surely.

Four car loads of wheels made by the Hart Cycle Company, Wolverhampton, have been received by the Svendsgaard Bicycle Company of Fergus Falls, Minn.

E. A. Kinsey & Co. of Cincinnati, in addition to making tools and various parts, are jobbers of the N. Y. B. & P. Co. tires for Ohio, Indiana and the south.

Cycle machinery is built to order by the Toledo Machine & Tool Company, of which G. F. Danielson is manager. Nickel plating is also made a specialty by this concern.

The Nebraska Cycle Company, of Lincoln, has named its wheel after the city in which it is manufactured. The popular Fred Pate is one of the stockholders of the concern.

Wilson, Myers & Company's line for '93 is composed of the Liberty full and light roadsters, the Goddess for ladies, the Bogie Man for road racing, and the Bogie Man racer.

The Hackney Bicycle Company controls the entire output of the Yost Manufacturing Company, consisting of the Falcon, Falconess, Falcon, Jr., and Falcon Jr. Combination.

The Barnes Tool Company, of New Haven, says it is prepared to demonstrate to any one interested that its wrenches possess points of special superiority over all others.

Mr. Perkins, who is still at the head of the Rockaway Manufacturing Company, expresses his willingness to match the Liberty against any other wheel as a high grade production.

The Acme Bicycle Company, of Newark, N. J., claims that its stand is the only one mounted on castors, for convenience in moving machines without removal from the stand.

The Buckeye Cycle Company of Cincinnati has made a few bicycles but does not intend to manufacture largely. It has a line of saddles and lamps of home manufacture for the '93 market.

The New Buckingham & Adams Company expects a big season with its 20-pound racer. The James Cycle Company, Chicago, handles this company's wheels, and can supply catalogues.

The Svendsgaard Bicycle Company of Fergus Falls, Minn., writes: "We have a complete repair shop fitted with nickel and copper plating outfit, enameling oven and a four-horse-power engine."

The Elastic Tip Company of 380 Atlantic avenue, Boston, is a well-known supply house for various articles in the cycle line. It has branches in Chicago, 'Frisco, London, Hamburg and Bombay.

The Columbian Novelty Company, of Newark, N. J., controls the Lenox saddle, made by the Nesler Manufacturing Company, for the whole country. This saddle is a modified form of elliptic spring.

The output of the Buffalo Tricycle Company will be improved as well as increased, all parts being improved and strengthened. The house has a great variety of styles, and offers a wide range in prices.

No matter in what part of the United States, Canada or Mexico a prospective maker may live, the Anglo-American Iron & Metal Company can supply him with a great variety of parts, rough or finished.

Parkhurst & Wilkinson control the output of the Indiana Chain & Stamping Company, C. J. Smith & Sons Company and the Union Drop Forge Company for the United States, the Garford Manufacturing Company west of Elyria, O.,

and the Hartford Rubber Works Company west of New York.

W. S. Bull and B. D. Harris, proprietors of the Buffalo Cycle Works, are in easy street. Having sold their entire output to H. C. Martin & Co., their only anxiety is to make that firm sell as many as possible.

Belcher & Loomis of Providence, lay claim to the largest hardware store in New England and believe themselves to be the most extensive importers of tools and steel goods in that part of the country.

Samuel Fisher & Co., of Birmingham have made plants for the Mannesman company, the Projectile company and the Perfecta Tube Company, all of which concerns have supplied tubing to American makers.

The Chapman Hardware Company of Toledo, aim to cover Ohio, Indiana and Michigan thoroughly. They supply either Columbias, Victors, Lovells, Tourists or the Western W. W. and Feathers' one lines in this territory.

The Weston fork cyclometer, made by Frank C. Weston, Bangor, Me., will be very much improved over the '92 model. It will be improved in appearance, accuracy and durability, and will register 10,000 miles instead of one, as formerly.

Thomas Smith & Sons, the famous "Smiths O' Saltley," furnish in addition to their long line of parts, a geared ordinary, a front driver safety, a Humber pattern and ladies' safety. An application addressed to Birmingham, England, will bring a catalogue.

The Chapman Hardware Company of Toledo has the following wheels and territory: Columbia for Lucas, Foulton, Wood, Ottawa and Henry counties; Hartford for Lucas, Ottawa and Henry counties; Lovell for Lucas, Paulding, Williams, Hancock, Foulton, Putnam, Erie, Huron, Defiance, Henry, Ottawa, Seneca and Wood counties; Tourist and Psycho for northwestern Ohio, western Indiana and southern Michigan; Western Wheel Works line, general.

The fate of a New Britain, Conn., cyclist, who went riding on the ice.

George R. Bidwell Cycle Company.

A line from this house runs thus: "The Tourist roadster has been reduced to forty pounds weight, and the light roadster to a fraction under thirty-five pounds. The Tourist road racer will follow the same lines as the others, long head and wheel base, Humber frame, etc., but weighs only thirty-one pounds. The two latter have 28-inch wheels, one three-quarter Bidwell pneumatic tires; the former 30-inch wheels, 1 3/4 and 2-inch tires to front and rear wheels respectively. The ladies' Tourist is also new, of beautiful appearance and moderate weight."

I THINK the making and selling of bicycles during 1893 will be a greater business than it has been in any preceding year.

One reason for this is the movement for good roads which is becoming so general throughout the entire country. With better highways we all know more bicycles will be used. Then again, there will be a new class of dealers selling bicycles. I refer to the carriage trade, which is plunging head forward into the business. Some of our carriage friends at the end of '93 will have considerable bicycle experience and, I fear, less money than they have now. But that they will sell some wheels to a new class of trade there isn't any doubt.

Traveling men for cycling houses are meeting with some rare experience in dealing with our carriage friends. One of them recently exhibited a machine to a carriage and farm wagon concern in a southern city, and the sample wheel was greatly admired, but the house had tied itself down for a certain period and could make no new deals until the old one was off. The wheel really did not compete with the machines already in stock. It was a case in which a bicycle contract was in reality being lived up to by the party which generally does not do so.

It is well for bicycle manufacturers not to be too sure that they have exactly what everybody is and has been for years looking for. Even some of the biggest men in the trade are mistaken. About a year ago I asked the president of one of our largest bicycle manufacturing concerns why he did not adopt the popular diamond style frame machine, and he replied that his company would not do so for two reasons. One was that such a change would take from his machine its peculiarly distinctive feature, (which I thought the people had tired of) and the other reason was that they, the company, could sell all the machines with that particularly distinctive feature that they could make. It was not, however, many months before the popular diamond style frame was adopted by this company and now it is being whooped up almost as vigorously as could be imagined.

The best bicycle dealers will not buy new bicycles unless they possess merit sufficient to compete with the machines made by old and well established houses. A case to prove this is that in which a popular style bicycle was made, or advertised as being made, by a house in another business, possessing not only a national reputation, but a line of customers in every city of any size in every state in the Union. The house imagined its reputation would sell the new machine. True, it did sell samples to its immense array of customers, but many of these samples are to-day tied up to ceilings, covered with dust, to either remain there or be sold at a loss.

A well posted eastern dealer remarked several days ago that he feared in the east a repetition of the cutting of prices so prevalent at some places in the west. The writer suggested in reply that if it did come it would principally apply

to the cheaper wheels and on the stock of makers' not firmly established. That prices will gradually drop is a probability, but I see no reason why makers of first class wheels should at this stage of the game, either drop their list or allow cutting of prices by giving fabulous discounts. Weak-kneed dealers and slimly financed makers, will through competition be compelled possibly to suffer an adjustment of their affairs, but this will not injure legitimate trade any more than a boil injures the health of the boiler—I mean the person who suffers the pain of the boil. In fact it will prove beneficial to him. I am speaking from experience in this boil business.

I am glad to notice that the coming change in the political complexion of the administration is having no adverse effect upon business. It should not. I have great confidence in the American people, and believe them capable of taking care of themselves under any circumstances. Postmaster-General Wanamaker will go out of office, but I hope his plan of using bicycles for country mail delivery will strike his successor favorably, and that the national agitation of the good roads subject will become greater than ever. RALPHANES.

Buffalo Cycle Works.

"Honest wheels, the best that brains can devise or money can buy." Such is the broad claim made by the Buffalo Cycle Works. This concern has aimed to produce a graceful, staunch, light machine that would stand up under all kinds of work. The '91 and '92 Buffalos were given thorough tests and stood them triumphantly. In the 1893 machine the house has utilized all the good points of the '91 and '92 Buffalos, and has introduced others. It invites a critical examination. Attention is called to the fact that all cones and bearing cases of the improved Buffalo dust proof ball bearings are of the best quality tool steel, machined from solid bar.

Specifications—The Buffalo lightweight roadster has improved diamond frame of Humber type, 44-inch wheel base, of best cold-drawn weldless steel tubing and steel forgings. Each forging is finished on a taper, leaving no sharp edge for the tube to break over. The tubes overlap the forgings instead of vice versa. The wheels are twenty-eight inches in diameter, tangent spokes enlarged at the hub end by the swaging process; rolled threads, brass nipples, thirty-two spokes in the front and thirty-six spokes in the rear wheel, tied and soldered where crossed; pneumatic tires. Buffalo improved ball bearings all around. Handle bars, tapered weldless tubing, gracefully curved and dropped, with cork or hard rubber handles. Ball bearing head, ten inches between ball centers. Front forks, flattened weldless tubing. Front wheel plunger brake. Forged steel sprocket wheels. Hardened chain, Abington-Humber pattern, five-sixteenths of an inch wide and one inch pitch. Detachable cranks, 6 1/2-inch throw. Mud guards, cold rolled steel, ample size. Standard gear, sixty inches. Finish.—Frame and front fork enamelled (not painted) black, the usual parts nickel plated on copper.

Weight.—All on, from thirty-four to thirty-six pounds.

The Buffalo Scorchers are similar in design and specifications, except that it is of lighter gauge tubing, etc., and is without brake or mud guards. Weight, from twenty-eight to thirty pounds. Standard gear, sixty-three inches.

Commencing on October 1 last, Capt. Frank E. Klipfel, the celebrated century rider of the Buffalo Ramblers, severely tested the 30-pound Buffalo Scorchers, '93 pattern, having ridden it over 1,000

miles, including eight centuries, over ordinary country roads, one of them a double century, from Buffalo to Erie, Pa. and return. Most of the latter was ridden at night, as he left Buffalo at 1 p. m. and finished at 7 a. m. the next morning. The wheel came through this severe practical test unscathed.

A Stolen Imperial.

The Ames & Frost Company reports the theft on Dec. 10, from the Y. M. C. A. building at Columbus, O., of Imperial Scorchers No. 4,343 and offers a reward for its return.

Trade Jottings.

A circular recently issued in Paris places the number of English makers at 550, French 190, American 185, German 120, other countries 50.

Bettys & Smith, Rochester, N. Y., make a light-weight machine for track use. It has 28-inch wheels and its weight is given as twenty and a half pounds.

The Lozier catalogue will be ready before January 1. Meanwhile a pamphlet, descriptive of the thread tire and the Cleavelands for '93, has been issued.

The Bison Cycle Company is officered as follows: John F. Henzel, president; Henry Janke, treasurer; William F. Tepe, secretary; Victor E. Ripper, manager.

Frank White—everybody in the trade knows him and that he hustles night and day in the interests of the Bidwell tire—is in Chicago and will remain there a few days, doing business in '93 pneumatics.

Among the recent additions to the list of makers the National Cycle Manufacturing Company, of Bay City, Mich., is prominent. It is promised that its wheel, the Goodwin, will be entitled to a place in the front rank.

Louis Jordan, of 71 Randolph street, Chicago, makes a special wheel to order. It is high grade, and weighs from twenty-five to thirty-three pounds. Jordan has a large enameling oven and is well equipped to do repairing of all kinds.

H. A. Lozier & Co., will be pleased to meet their agents at the Philadelphia show and renew contracts for the coming year. They desire them to write and make engagements if possible, and would be glad to have other dealers make themselves known.

Bloomington, Ill., is one of the nicest cycle cities in the state. During the past few weeks there has been scarcely a day when there was not a traveling representative of some wheel in the place. Some of the smaller houses are closing for their '93 trade. The damage suit of Harber Bros. Company vs. Moffat Cycle Company has created some interest lately.

The new factory of the Buffalo Cycle Works recently occupied, is on the Niagara Falls branch of the Erie Railroad at Kensington Station, Buffalo, about one-half mile south of the factory of the Niagara Machine Company. The buildings are heated by steam and the managers are now putting in an electric lighting plant, as well as a Springfield gas machine to make gas for brazing, etc. They are also putting in a complete nickelling plant and extra machinery so that within the next two or three weeks they will be situated in a very complete bicycle plant with abundance of room. "I am sorry," writes Mr. Bull, "that I have no photo of the building to send you. This property is my own. As we shall be in our own buildings and as we have our '93 output sold we are feeling comparatively comfortable. We shall commence to deliver machines next week."

FOR almost two years I had been suffering with rheumatism, so early in December, 1890, I secured a leave of absence, and left my command in Washington for a month's stay in sunny Florida, where I knew I should find a warm welcome from an aunt and uncle, who lived in an old-fashioned southern home on the Atlantic coast. The old house was surrounded by an orange grove, from which the two good people derived income enough to keep them comfortably, and also entertain an occasional guest from the north.

For a month I wandered about the pleasant groves, and through the swamp lands further away, finding both health and pleasure in the shooting and fishing; also forgetting that the world was larger than just what I could travel over in my short expeditions.

In all that time probably not more than half a dozen newspapers had reached me; even those that did succeed in successfully passing the many hands necessary, before I could get them, were only local sheets, with little, or no news from the outside world in them.

Things ran along this way for nearly a month, when I found, by consulting a calendar, that but five days remained before my leave of absence expired, at which time I must be back at my post in Washington.

The next morning I said good-by to my relatives, and, accompanied by the old negro servant for a driver, started

in a luxurious Pullman, as fast as a powerful iron horse could carry me.

As the train came to a stop at one of the pleasant winter resorts, I noticed a young couple enter the car, and at once imagined they were away on a wedding

Young Officer's Bravery," and remembering that I had heard nothing from the frontier for nearly a month, asked for the news contained under so startling a heading.

"Yes, do let us show Tom the account

back of such a heading, I declined to read any more of the article and requested that he tell me of his exploit and how he came to be in Florida while his company was battling with redskins in the Dakota hills.

"The story is a long one and may not prove as interesting as you would think, especially the first of it, which is more of a romance than an adventure," said the lieutenant.

I assured him that I knew it would all be interesting, and of my anxiety for him to tell it.

"Last spring I, like yourself, was suffering with rheumatism, caused by almost constant exposure during campaigning in Dakota and the northwest, in the winter season. The disease had become aggravated to such an extent that the regimental surgeon advised complete rest for at least six months as the only way to rid myself of it, and suggested that I get a leave of absence for that length of time. At least two months—March and April—were to be spent in the south, the balance of the time to go where I pleased, so long as I stayed away from my post and work.

"Armed with the surgeon's certificate, it was no trouble to get the desired leave, and soon I was speeding away southward, where I spent two pleasant months and then returned to my home in Omaha, for a short visit with my folks, before leaving for California to spend the rest of my vacation.

"At home I have a younger brother, nineteen years old, who takes a great interest in bicycling, and who owns one of the best wheels in Omaha. Nothing

I PUSHED AHEAD AND PASSED THEM.

trip. Something in the man's face looked familiar, but it was several minutes before I could place him. After I had recognized in him an old West Point comrade, both of us having graduated five years before, he entering the cavalry service and being sent west, while I, not passing so good an examination, got only an infantry officer's commission and an order to join my command in Washington, it did not take long to make myself known, when, to my delight, I found that he also was going to Washington before returning to his command in Dakota.

For some time everything else was forgotten in our enjoyment in recalling old college experiences and telling of our lives since parting at the doorway of our military careers five years before. Even that all-absorbing topic, with military men especially, the Indian outbreak, was forgotten until I noticed in Mrs. Jefferson's (my friend's wife) hand a newspaper having a large "scare" head: "A

of my wonderful bravery," said my friend, laughingly, as he reached over to get the paper from his wife's hands.

"Giles ridicules the idea of its being brave," returned the wife, "but I think he is a real hero, and must say it even if he is my husband."

"More like selfishness than bravery," said he; but, call it whatever you like, I would not care to go through the same experience again, at least not since I have secured the desired prize," and he looked lovingly at the beautiful woman beside him.

By this time I had read the next two headings, which were as follows:

LIEUT. JEFFERSON OF THE — CAVALRY RUNS A MAD RACE WITH SAVAGES TO BRING RELIEF TO SUFFERING COMRADES.

MOUNTED ON A BICYCLE, HE BOTH DISTANCES AND MYSTIFIES THE BLOOD-THIRSTY INDIANS.

Knowing that a good story must lie

I IMPROVED THE INVITATION TO USE HIS WHEEL.

for the station, some seven miles away, and ere long was traveling northward

I FOUND A YOUNG LADY WITH A BROKEN CHAIN.

would satisfy him but that I should learn to ride, and having nothing else to

do for a few days I improved the invention to use his wheel.

"An account of the many hard falls I

I ATTEMPTED TO EXPLAIN ITS MYSTERIES.

got learning is unnecessary; sufficient it is to say I got there, but being naturally of a stubborn disposition, I would rather have died in the attempt to ride, after I had once commenced, than to give up, so finally succeeded and was able to take short rides about the city.

"These short rides kept increasing to longer ones; my few days had grown to many, and still I was loath to leave, for I was really enjoying the new sensation of wheeling. To be independent of an animal that must be curried and fed every day, and have a servant that was always ready, without a moment's notice, would certainly be new and interesting to any cavalryman; anyway, it was to me. Besides this, the bicycle was at that time just beginning to attract the attention of military people as a possible mount for soldiers, and I found a pleasure in experimenting by riding over all kinds of conceivable roads. Any place where I imagined a horse could not go I would venture, until finally I was an expert at such work, if not at fast riding.

"It was during one of these expeditions over a country timber road that I found a young lady, several miles from her city home, and with a broken chain. Our combined efforts failed to mend the break, so there was nothing to do but walk, at least to the nearest country house, where some conveyance could probably be secured to take us back to the city. The only thing we could get was a lumber wagon, and to that same wagon I am indebted for my wife, for such the young lady was, or rather is now, that I accompanied in that memorable ride, over roads that had not seemed so bad when riding on a wheel, when we could pick our way, but which, when riding in a springless wagon, seemed worse than any I had ever encountered in the Dakota hills. Riding over such roads in a lumber wagon is enough to make any woman love the man who would endure such agony for the sake of keeping her company; don't you think so, Madge?"

His wife did think so, I suppose, but didn't think it necessary to say so, and he continued:

"Of course after such a ride I had to call, and after one call I had to make another, until it became a regular thing of one or two a week. My new acquaintance, and our wheeling expeditions, occupied so much of my time and thoughts that I forgot all about California for several weeks. When I finally thought of my intended western trip I concluded that they had plenty of soldiers without me, and so remained in Omaha.

"The calls continued and the rides continued, until—you know how they

all end—one day, when we had wandered onto the same road where the breakdown had occurred some two months before, I mustered up courage enough to ask the important question, to which she made a satisfactory answer, and then we fixed the wedding day for Christmas eve.

"But two weeks remained before time for me to return to Dakota. As there would be at least two months more of pleasant weather, I determined to take a wheel back to Pine Ridge with me, that I might enjoy as long as possible such a pleasant recreation. Accordingly I bought one, and when I left for Dakota took it with me.

"One that was not there can hardly imagine the awe with which the Indians received my two-wheeled mount. With many of them around the post I was quite familiar, and attempted to explain the machine's mysteries, little dreaming that the day would ever come when my life would depend on their knowing nothing about such things. My brother officers made many uncomplimentary remarks about my bicycle, they thinking such things only fit for city dudes and

and without replying to my salute he said abruptly:

"Say, lieutenant, I was just speaking to the colonel about that little matter you were speaking of this morning, the riding of that pair of wheels you own tomorrow, you know, and he thinks it would be a good idea; Miles has something of that kind in his head, and a report of your experiment in that line might please him, as well as show him what d—d nonsense it all is. That last for myself, for the colonel didn't say it."

"As he passed on I immediately caught the idea of his allowing me to ride the wheel. He intended to cover that more than forty miles to White River camp in a day, and by so doing expected to tire me out in the first two or three hours, so I would have to abandon my bicycle and take to the horse. It is unnecessary to say that I then and there determined to ride the wheel and arrive at the camp as soon as the major should. Going on up to the colonel's quarters I made formal application for a leave of absence during the holidays, giving as a reason for such my intention of being married at that time; then went to

BIDDING GOOD-BYE.

their close relations, but still I stuck to my wheel, and enjoyed it.

"It was along early in November when the Indians first began to get troublesome, and a few days after the first disturbance a messenger came in from the camp over on White River, bringing news of an uprising, and a dispatch asking for re-enforcements for the one troop already there.

"My own troop, D, and troop B were ordered to be ready to leave the next morning under command of Major Hillock. Recognizing in the trip an opportunity to further prove the truth of my assertions in regard to the bicycle as a mount for soldiers, I asked the major to allow me to take my wheel along; I to ride it while some of my company would lead my horse. At first he refused, for he was one of those hardened old western cavalry officers who obstinately refused to see good of any kind in anything new.

"Nothing more was said of it then, but that evening I passed him as he was returning from the colonel's quarters,

my quarters and was soon dreaming of contests on a wheel.

"Shortly after reveille the next morning both troops started out for a hard day's march, myself bringing up the rear, as I had secured permission to ride wherever it suited my fancy, so long as I did not drop back clear out of sight. The major had no idea of my staying anywhere but behind; he never dreamed of my setting the pace for all of them, himself included. Before long I pushed ahead and passed them, noticing as I did so the scowl on the major's face, but he said nothing, for he didn't expect it to last long. That trip was a hard one for me, harder than the next one; many a hill I walked up, for they were too steep to climb on the wheel; then the troops would pass me, but I would catch them at the bottom of the other side, for Dakota hills always have two sides; life there is not all up grade. All day long things went along in this way, the old major's face getting darker and darker as we neared White River camp, and as the sun kept getting nearer and nearer

the western horizon. He had prophesied failure, and was one of those men who glory in repeating 'I told you so' to those who would not profit by his advice.

"You can imagine what a pleasant sight White River camp was to me that evening. We first saw it from the top of a hill some two miles away, and I set out to beat the command into camp, which I did by about a quarter of a mile. When my company arrived I was greeted with three rousing cheers which only added to the major's wrath, so much so that instead of allowing me to get the sleep I needed that night, he relieved the acting officer of the guard and put me on duty in his place.

"The presence of a larger force seemed to quiet the Indians around White River, for they gave us but little trouble. Save the occasional stopping of a dance we had nothing to do, hardly as much as when at the agency, and would have enjoyed ourselves immensely had the weather been pleasant. The day of our trip out was one of the finest we had had all fall, but that night it first began to rain, then changed to sleet, then to snow, then back to sleet and rain again, and so kept it up for almost the entire four weeks we were there. The third week a messenger from the agency came out, bringing, among other things, the papers for my leave of absence, which was to commence December 18.

"Two days later a wagon of rations arrived, and with it a dispatch ordering two of our three companies to leave at once for the Bad Lands, where we were to round up two or three roving bands of Brules and return to the reservation. We started next morning, leaving at White River the company we had found there. Again I insisted on taking my wheel with me, and this time the major strongly objected to it.

"This d—d kid's play has gone far enough now," said he, "we are out for a hard campaign, and not on a holiday excursion, and will go prepared for such."

"But the wheel went with us, I using a little persuasion, and promising to abandon it whenever necessity demanded the sacrifice. It was too expensive a luxury to throw away as long as there was a chance of having it. The riding this time was far from pleasant; the sleet and snow had made it slippery and, while the ground was frozen, it was very rough; still I believe my ride was as pleasant as that of the others, many of them freezing feet, ears, nose or fingers, while I had enough work to do to keep me warm, even without my overcoat.

"After two days of such work my company was left to guard a pass leading into the Bad Lands, while the other

"WHAT ARE YOU GOING TO RIDE?"

one, accompanied by the major, took a circuitous route to head off the Indians that were making their way through

them. We pitched the best camp possible at the foot of a large hill, and settled down for a ten-days' stay. That night it began to snow and kept it up all night. Not a sign of Indians was seen, and we expected ten days of unpleasant quiet. For three days we enjoyed life as best we could, with nothing to do but keep warm, and the guards posted.

"Along toward noon of the fourth day, December 16, we heard firing in front of us, and almost at the same time saw the major's company slowly retreating toward us, contesting every inch of ground. The first person to reach our camp was a messenger with orders for us to move to the top of the hill and construct what fortifications we could for both ourselves and the retreating company. By the time the major and his men reached us, we had builded, out of the stones and logs at hand, fortifications large enough to protect both companies from the Indians, and behind which we could at least keep them at bay if not drive them away.

"Now let me skip over a day or two until the night before my memorable ride. In the meantime sleet had again covered the coating of snow, forming a crust that would almost bear the weight of a horse, and a man could walk over quite easily without breaking through. The red devils, seemingly some five hundred of them, were still all around us, and would have long since had our scalps had not our fortifications afforded us protection from their lead. You know how it is, if an Indian is killed all the papers and preachers in the country take it up, and write, and preach of the cruelty of the soldiers, while a whole regiment of soldiers could be wiped out and hardly call forth a few sentences of sympathy from the general public. For this reason we had to hold our ammunition and let the redskins shoot when they pleased. Two of our men had been killed, a couple of wagon-loads of rations captured and starvation was almost staring us in the face before the major asked for a volunteer to go for assistance.

"That was the night of the second day; by close noon my rations would last for three days more, and if the Indians didn't charge the fortifications, the ammunition would last.

"I was the first person to volunteer, thinking more of my wedding, only four days off, than anything else. I told the major that I believed I could get through to White River at least, and there would find the company we had left. I knew that not more than six or eight Indians would follow me for any distance, and when I should reach White River camp these could either be driven back or captured.

"I intended to ride my wheel, but didn't intend to tell the major so, if I could help it. While studying over plans for my ride, some half hour later, and wondering if I really could reach White River in safety, and so get to Omaha by Christmas eve, the major came up behind me, and without announcing himself, asked:

"Are you going to try to get away on foot or mounted?"

"Mounted of course, major," I replied; "it would be useless for me to try to reach White River in time to be of any assistance to you if I didn't."

"What are you going to ride?"

"My bicycle, sir," I replied again, now thoroughly convinced that he intended to oppose it.

"Then you don't go; I am not going to be responsible for all the young fools in the army. Sergeant Morris, this way, sir."

"Here's a pretty fix I am in now, I thought; Morris will be sent for assistance, with not one chance in twenty of

ever getting two miles away, and if I even escape with my scalp, let alone my wedding, I will be fortunate.

"See here, major," I called, "I am anxious to attempt this run, and have good reasons to believe that I can succeed in eluding the Indians and reach White River in safety; won't you let me go?"

"I don't know but what the service would be better off without such fools, so I guess you may go," was the uncomplimentary reply I received.

"But complimentary or not it gave me the privilege of trying to keep a, to me, very important engagement in Omaha Christmas eve, and I intended to try for it. As I said before, there was more selfishness than bravery in it, for I thought more of my marriage than of securing help for my comrades.

"Both of us—for the old major still intended to also send the sergeant, he never expecting me to get two miles away—were to start before sunrise the next

last comrade—for we are all comrades out there, and the enlisted man is as much thought of as a colonel, I should ever see." Then, for almost the first time, I recognized what my getting through safely meant to the men I had left on the top of the hill behind me. All the way down the sergeant's horse had broken through the crust at every step, and I knew that unless we passed through the Indians' lines without being noticed he was doomed, for he could never escape them. As for myself I had brighter hopes, for the combined weight of myself and my wheel was not enough to break the heavy crust, and the snow, while blinding, was so light, and the crust so smooth, that there was no chance for it to pile up in heavy drifts.

"I crept along cautiously, several times dismounting, so as to allow the sergeant to have a chance to get through the lines first if possible, but the breaking snow betrayed him, and I had hardly lost sight of him before I heard a blood-

"I was hardly a mile from the Indian's camp before I heard firing, and drawing my revolver I rode in the direction from which the sound came, expecting to find the sergeant in the hands of the redskins. My worst fears were realized, for hardly had I gone five hundred yards before I came to a scene that made my blood turn cold. There on the ground lay the sergeant, the blood streaming from a wound in his side, and an Indian stooping over him with knife in hand to secure his scalp. Quicker than I can tell it I was upon them, and, without dismounting, fired two shots as I passed. A cry of pain was the only answer I got, and whether or not I killed one of them I never knew; time was too precious just then to stop and find out.

"While it had taken our command two days to cover the distance between White River and Bad Lands, it had been by a round-about way, and I expected to cover the distance, if nothing happened, in half that time.

"All day long I rode through the blinding snow; the wind, which was blowing from the northwest, helping me along, and I flew over the ground at a great rate. The Indians that I had passed where the sergeant fell had seemingly given up the pursuit after a short time, for I heard no more of them, and expected no more trouble from such a source.

"Poor Sergeant Morris! He was a brave soldier—only a brave one would have undertaken what he did without flinching. All day long, as I pushed my wheel through the storm, I thought of him and our five years of comradeship. He was a private just enlisted, when I was first assigned to the troop, and in his five years of service had worked up to second sergeant. Relief, as the price they had paid for it, would hardly be appreciated by his company.

"It was 4 o'clock in the afternoon before I reached White River; then it was some time before I could tell just where I was. By examining the bank I found that I had struck the river some eight miles above the camp, but a ride on the ice of a little over an hour brought me to where we had left the company, only to find them gone. Gone where? was the first question I asked myself. Had the Indians attacked them and driven them away, or had they been ordered to leave. Scrambling up the bank I soon satisfied myself that Indians had not been the cause of their leaving, that is, they had not been driven away. Orders from Pine Ridge was all that could have moved them, but which way had they gone?

"That I would have to stop for the night seemed certain, and gathering some wood together I soon had a good fire going, and was just beginning to enjoy it when—snap! snap! and two bullets struck the bank close to me. That the Indians had followed me was certain, but this time how was I going to escape them.

"Lying flat on the ground between the fire and the river, I rolled as fast as possible toward the bank, and reached it none too soon, for as I scrambled onto my wheel again two Indians rode out on to the sleet-covered ice about a quarter of a mile up the river from me. Now I was in for a race, a race that meant life or death to me. Could I have succeeded in scaling the other bank I should have tried to escape them in the darkness, but time would not permit it.

"Leaning low over the handle-bars of the wheel I rode right at them, for beyond the Indians about a mile was a sandy bar that would form an easy egress from the trap I had been caught in. My riding straight for the two had

I FIRED AS I PASSED.

morning, so as to get through the Indian's line, if possible, before more than their sentries were awake.

"For two days we had been expecting a blizzard, and when the guard awoke the next morning I found that it had come, for I was almost buried in snow, and the wind was blowing at almost forty miles an hour. In some respects the weather favored us, for one could not see two rods ahead of him, but again we could never follow a trail in such a storm and would run great risk of wandering around in a circle until freezing to death. Fortunately for myself I had a small pocket compass, which I fixed unto the head of my wheel and so could prevent such a mishap as that.

"We left camp together and followed a little path down the side of the hill until within two hundred yards of the Indians, when bidding each other goodbye, we mounted our different steeds and were off to meet—what?

"Ah, lieutenant, not having seen service in such a country as Dakota, you can't imagine what such a parting meant. That sergeant was probably the

thirsty war whoop that told me he was discovered.

"Throwing all the power in my legs onto the pedals, I darted forward into the very center of the excited crowd of savages, who were bidding their ponies preparatory to giving pursuit. Striking one big buck, who was attempting to rub the sleep out of his eyes, I sent him sprawling in the snow some ten feet away, while I was thrown almost an equal distance in the opposite direction, and so first attracted attention to myself, but as I held onto the handle-bars, I was up and away again before they could recover from their surprise caused by my curious mount.

"Again I threw the power of my whole body onto the pedals, and again shot forward like an arrow. Talk about your 2:20 records, I don't believe that they are in it with the time I made that morning. Every little while the wheels would fail to stick, and would slide as they struck little rifts of snow, but only for a moment; then, as the wheels broke through it I would shoot forward again like the wind.

the desired effect; they had not expected such a move and were not prepared for it; then too, the to them strange machine I was riding mystified them so much that before they could recover from it I

I WAS JUST BEGINNING TO ENJOY IT.

had put a safe distance between us, and was off for Pine Ridge.

"What a race that was! The excitement of the morning was nothing to it. On, on, I rode, until it seemed that I was almost flying. Now the wind, instead of helping me, was almost against me, for I was going back up the river. Several times I could hear the hoof-beats behind me grow louder as the Indians would gain a little, only to lose it again. Life never before seemed so dear to me. I thought of the comrades for whose relief I was riding, of the bride who would await my coming Christmas Eve, and of the horrible death that was almost upon me.

"How the pedals ever stood the strain of that ride I do not know, but they did, and in less time almost than it takes to tell I had reached the sand, across which I rode without slackening my speed in the least. After I had crossed the bar and reached the timber I felt reasonably safe.

"It is unnecessary to tell of the many little incidents of that night's ride, for they were many. An hour's ride took me through the timber, and by eight o'clock the storm ceased, the clouds cleared away, giving me the benefit of the light of a full moon, without which I don't believe I should ever have suc-

ceeded in reaching the agency. Of the Indians I heard no more after reaching the timber, and suppose they gave up the chase.

"That afternoon I left for Omaha, after telegraphing that I was coming, and arrived there in good time for a Christmas Eve wedding. Before starting I saw four companies of cavalry leave for the Bad Lands to relieve my comrades there, and have since received a letter from Major Hillock thanking me for my wonderful ride.

The colonel thought I deserved a longer rest after such an experience, so extended the time of my leave of absence and gave me time enough to take a wedding trip south."

That the government appreciates such bravery as that shown by Lieutenant Jefferson is evidenced by the fact that he was rewarded with a captain's commission, and assigned to a troop in a more peaceful part of the country. He also received one of the medals awarded for bravery.

Since then General Miles has had the bicycle introduced into his division of the army with satisfactory results. Let us hope that the service may be still further extended.

The Englewood Opening.

Thursday evening the Englewood

CENTURY C. C., OF SYRACUSE.

Sketch of a Prosperous Career of Two Seasons—A \$20,000 Club House.

The Century Cycling Club, of Syracuse, although only two seasons old, is one of the largest and most enterprising clubs in the country, occupying a \$20,000 club house on the city's finest asphalt street.

The club was organized on April 15, 1892, with twenty-three charter members. It now numbers almost 300 riders, the majority of whom are first-class road men. The Century club is being reorganized as one of the principal wheeling clubs of the state; indeed, it holds as many, if not more honors than any one organization in the division. Charles W. Wood holds the second highest office within the gift of the wheelmen of the state, that of vice consul of the division. Joseph F. Ruhl is chairman of the representatives of the fourth New York district, another elective position, while Secretary C. Edward Wood, besides being local consul of Syracuse, is the second of the three members of the state committee for the improvement of highways, of which Isaac B. Potter, of New York, is chairman. Still another appointive office held by a "Centurian" is that of Floyd Coombs, who is a member of the State Road Book committee.

kitchen, with butler's pantry and closets, are the principal rooms of the first floor. Large plate glass windows and a deep bay window on the east side afford excellent views of the handsome thoroughfare.

On the second floor are the pool, billiard, smoking, committee and toilet

rooms, together with others fitted up for the accommodations of a well-arranged club house, including card room, steward's apartments, etc.

On the third floor is located the pride of the club; a large, athletic bath room, containing shower, needle and other modern baths, with dressing room and lockers attached, opposite which is the gymnasium and exercising room that can be used as a large audience room when necessary. An idea of the size may be imagined from the fact that these two rooms cover the entire floor. A large wheel room, capable of holding two or three hundred wheels, is also provided, while the house is furnished throughout with the best money can buy.

A beautiful club house is not all that can be claimed by the Century C. C., for it has proven to contain hustlers in every sense, and stimulated wheelmen to their best efforts toward the general advancement of cycling.

A picture is here shown of the club's racing team and some of its handsome trophies. These hold every local road record. C. E. W.

Burglars Get Twelve Bicycles.

When the employees of the C. F. Stokes Manufacturing Company arrived at the store at 293 Wabash avenue, Thursday morning, they found the rear door open, goods from the boxes on the shelves scattered promiscuously, every desk torn open, papers scattered about and drawers open. A hasty inventory showed that fully a dozen bicycles of various makes stored in the rear end of the store had been taken, together with four pairs of shoes, and from the appearance of things, as many bicycle suits and a full line of sundries. Nothing else of importance was taken. The thieves had entered through a skylight in the roof, lowering themselves into the shipping room. A wagon must have been used to carry away the plunder. The member of the Veteran Police Patrol who watches the Stokes store, received a pretty raking over the coals from Herrick, but declared that he had seen nothing. "Fly cops" who came to investigate and spent a half-hour looking at the broken desks sagely informed the chief centurian that "It was no jimmy dat was used to open dose desks, but a screw driver."

Cleared \$225.

The Lake View Cycling Club cleared \$225 on its recent raffle for an Imperial pneumatic, gold watch and other prizes to the number of a dozen. The club house furnishing fund was benefited thereby.

Cycling Club gave its opening party in the new club house. As at the opening stag a huge success was scored. The furnishing of the new home, now completed, is magnificent and very tasty. All admired it. Every Tuesday and Friday evening now Professor Fred Allen gives instructions to large gymnasium classes, and two other evenings each week are devoted to indoor ball, while Saturday evenings are given up to a stag smoker.

Smiths in the Trade.

The name of Smith is one met with every day in the cycle business, and the Smiths hold prominent positions. There is a Mr. Smith in the Ariel, Sunol, National and Indiana factories, at Morgan & Wright's, Smithville, N. J., and a number of other prominent factories. What's in a name, anyway?

A Well Attended Affair.

Another guest night at the Illinois Cycling Club last Saturday evening, filled the club's pretty home at 1,068 Washington boulevard to the doors, as this class of entertainment, a sort of athletic, musical and smoker with light lunch, always does.

The officers of the club are: President, H. B. Blodgett (superintendent of schools); vice president, I. J. Everson; secretary, C. Edward Wood; treasurer, J. Alfred Deil; captain, James H. Johnson. The club is governed by a board of directors, fifteen in number. It also has a century division, of which Roy Smith, who made the first century run on Jan. 1, 1892, is centurian.

An edition of one of the cycle journals once said: "The Century Cycling has the finest equipped cycle club house I have ever seen." On this point those who have had the pleasure of being entertained by the C. C. C. will agree.

The house, a cut of which is here given, is admirably located for club purposes in the central part of the city, and yet just out of the section usually crowded with vehicles, on a broad street with asphalt pavement; the situation could scarcely be bettered. The house consists of three stories above a spacious cellar; the ceilings are high and the rooms are large and well lighted by plate glass windows reaching from floor to ceiling.

The front doors, reached by broad and easy stone steps, open into a vestibule, beyond which is a large hall and spacious double parlors. Library, cafe,

THE WELCOME COMMAND.

ceeded in reaching the agency. Of the Indians I heard no more after reaching the timber, and suppose they gave up the chase.

"It was not more than five the next morning when the welcome command of a sentry ordered me to halt. You can imagine how glad I was to reach the barracks after riding almost constantly for a day and a night. The sentry

THE STEARNS BICYCLES!

Representing the Highest Type of Cycle Construction up to the present time. We believe the STEARNS WHEELS will be found to meet, in all respects, the requirements of the most critical rider.

—ORANGE RIMS!—

Chicago C. C. men ran first, second and third in the team race at Riverside Wheelmen's meet, New York.

Wisconsin division meet held (7th) at Oshkosh.

Indiana division meet (12th) at Vincennes.

'93--CLEVELANDS--'93

CLEVELAND NO. 4.

A FRESH START.

We are not going to fall back upon the good reputation the No. 4 made in '92. The new pattern is improved in many ways, and is to day the finest wheel on earth. We invite your close inspection. The wheels back up our statements.

ARGUMENT IS USELESS

In trying to convince a man who has once ridden the **Cleveland Thread Tire** that another is just as good or better. No canvass for him. It makes a tire stiff and detracts from it resiliency.

CLEVELAND NO. 5.

Generous Approval

Has been bestowed upon this wheel by experts. It is as fine as our other wheels; the same general specifications as the No. 4.

The Cat.'s Out.

H. A. LOZIER & CO.,
CLEVELAND, OHIO.

nes, and Kentucky division meet (11th and 12th) at Lexington.

Peter Regan severely hurt in a boys' race at Boston.

Speedy Cycle Manufacturing Company, Chicago, sold its factory to the Sunol Cycle Company.

Changes occurred in the Sercombe-Bolte Company. C. M. Sanger elected president.

At Milwaukee, under very discouraging conditions, Sanger tried for the mile record and failed.

H. Arnold and S. D. Bigbie rode a tandem tricycle fifty miles in 2 hrs. 19 min., on the road.

At Springfield, 29th, Windle rode three miles in 7:04 3-5, four in 9:26 3-5 and five in 11:41, all new records.

Berlo rode a mile in 2:17 1-5 without pacemakers, and Bliss a mile, flying start, in 2:13 2-5, at Columbus.

C. W. Davis rode a quarter in 32 1-2 sec., at Indianapolis. Johnson rode from scratch in the half-mile in 1:05 1-2.

Cycle Manufacturers' Protective Association, of England, decided to hold a show, in addition to the Stanley show.

Waller, of San Francisco, failed in an attempt to beat twenty-four hour record, being injured by collision with a fence.

C. A. Dimon appointed editor of Philadelphia *Cycling*, Frank Egan of *Sporting Life* and Henry Crowther joined *Bicycling World* staff.

Two directors of the Coventry Machineists' Company arrived in America and decided to locate their new factory at Richmond, Ind.

Century Road Club annual run over the Elgin-Aurora course. One hundred and sixty-six men registered but many others finished. Miss Hattie Bickers was the first lady finisher, and was followed by four others.

The following records were made in trials at Springfield: Zimmerman, one-mile, flying start, 2:08 4-5; Windle, half-mile, standing start, 1:00 1-5; Taylor, one-mile, flying start, 2:03 1-5; Zimmerman, one-mile, flying start, 2:06 4-5.

Annual races at Hartford. Zimmerman made a new three-quarter mile competition record of 1:46 1-5. Windle beat Taylor and Tyler at a half. On the second day three heats in the half-mile handicap were won as follows: Zimmerman, 1:01 4-5; Windle, 1:02 3-5; Tyler, 1:02 3-5. Zimmerman won the mile open, riding the last quarter in 27 sec. George Smith rode a quarter, standing start, in 31 1-5 sec.

Bicycle railway between Smithville and Mount Holly, N. J., given a successful trial.

Miss Spear, of Cumberland, Md., took part in a relay ride from Washington to Pittsburg.

Hartford Cycle Company moved into new quarters in the Board of Trade and Power Company building.

Colonel Pope purchased a controlling interest in the Hartford Rubber Company and was elected president.

Stock of Warwick Cycle Manufacturing Company increased to \$200,000 and Charles D. Rood elected president.

Rowley and Isley rode a tandem twenty-two miles 153 yards in an hour, and beat all records from nine to sixteen miles, at Herne Hill.

Springfield races, 15th and 16th. Zimmerman defeated, first day, by Tyler and Windle in the mile open, and by Taylor in the mile handicap. He was an easy winner of the half-mile, and the one-mile, world's record race, second day. In a trial against time Tyler lowered the mile record to 2:03 4-5. Murphy Brothers and A. C. Banker rode a triplet a half-mile in 1 min. 1 sec., and Herman and Fuller one mile on a tandem in 2 min. 17 4-5 sec.

The Indiana Bicycle Company's factory partially destroyed by fire.

Professional league of wheelmen suggested by eastern men.

Columbian parade of wheelmen held in New York.

March-Davis Cycle Company incorporated at Chicago.

Bert Harding lowered the De Soto record to 9 hrs. 25 min.

Rhodes rode a flying quarter at Jacksonville, Ill., in 27 1-5 sec.

Zimmerman won the two-mile championship of the Amateur Athletic Union. W. H. Marriott, of the South End Wheelmen, Philadelphia, died suddenly of heart disease.

Lumsden won a five-mile race and a piano, beating Johnson and others, at Jacksonville, Ill.

National Columbian United Wheelmen's Association commenced erection of a club house at Chicago.

Boston A. A. 25-mile road race won by F. B. Emerson. Time prize won by McDuffee, in 1 hr. 22 min. 7 sec.

Important races held at Jacksonville, Ill.; Louisville, Ky.; Evansville, Ind.; Chicago, Ill., and Cincinnati, O.

Judge Townsend, United States circuit court, decided the Frathers' one vs. Bidwell tire suits in favor of the former.

Amos W. Thomas, inventor of the Thomas tire, sued Bidwell and others for money alleged to be due for royalties.

South End Wheelmen, Philadelphia, extended thanks to Mayor Stewart for his efforts toward street improvement.

Johnson beat Lumsden, Rhodes and others in a one-mile "piano" race at Evansville. Johnson also rode a mile in 2:13.

Chicago club held meet at Washington Park. In a one-mile triplet race, Banker, Merrill and Winship won in 2 min. 9 1-5 sec.

Windle rode one mile, with flying start, at Springfield, Mass., in 2:02 3-5; one mile, standing start, in 2:05 3-5; one-half-mile, standing start, in 57 4-5 sec.,

and one half-mile, flying start, in 57 2-5 sec.

Dallas (Tex.) Wheel Club held a successful meet.

Professional league of wheelmen suggested by eastern men.

Racing board met at Chicago. Bliss and Keator of Chicago suspended.

M. B. Fowler rode five miles in 12:16 1-5, beating the English record.

William E. Hunter rode from Chicago to Lynn, Mass., 1,200 miles, in sixteen days.

New York Recorder proposed to build an asphalt road from Chicago to New York.

F. T. Bidlake rode a tricycle from London to York, 195 miles, in 13h. 19m.—record.

Shorland won a 24-hour road race in England, covering 367 miles, beating the record, held by Holbein, eight miles.

Good roads convention held at Central Music Hall, Chicago. An association was formed, of which Judge Thayer of Iowa was elected president and S. T. K. Prime secretary.

John Hertz sentenced to two years imprisonment by a California judge for stealing a bicycle.

Parkside track and grounds offered for sale.

New York Press Cycling Club organized.

Three days' indoor racing held at Milwaukee.

Hartford Wheel Club held its annual banquet.

Snell Cycle Fittings Company organized at Toledo.

Des Moines Cycling Club opened its new club house.

Century Road Club of America formally organized.

H. C. Tyler banqueted by the Springfield Bicycle Club.

Vincent Cycle Manufacturing Company formed at Buffalo.

Lake View Wheelmen, Rochester, decided to build a house to cost \$8,000.

Zimmerman presented a gold-headed cane by the A-bury Park Wheelmen.

Chicago Cycling Club members engaged in an "ordinary" run to Pullman.

Schofield made new records at quarter, half and three-quarter mile at Herne Hill.

Englewood Cycling Club, of Englewood, Ill., moved into its new club house.

Massachusetts Bicycle Club opened new club house at 6 Batavia street, Boston.

R. L. Coleman won a bet of \$1,500 with the New York Recorder on the election.

Congressman P. S. Post, of Illinois, thanked wheelmen for aiding in his election.

Rev. C. W. Hiatt, of Kalamazoo, Mich., preached on cycling, commending the pastime.

A number of western riders visited Nashville, Tenn., on a record-breaking expedition.

Building of the National Cycle Manu-

facturing Company commenced at Bay City, Mich.

Chicago men won races at Nashville, Tenn.

The Brooklyn B. C. decided to build a country home.

F. A. Foell, of Buffalo, completes thirty-two centuries.

Annual elections held in all the divisions of the L. A. W.

The League Cycle Company brought out a new chainless wheel.

A. Featherstone won suit against American Ormonde Cycle Company.

National Cycle Manufacturing Company, of Bay City, Mich., incorporated.

Louis Shoeninger of the Western Wheel Works started for Europe on account of poor health.

Commissioners of Belle Isle, Detroit, issued notice that no further road racing would be allowed.

Sixteenth annual Stanley show held at Agricultural Hall, London. Over 2,000 machines were shown.

Wheelmen attended political meeting at Hartford and helped nominate Col. Burdette for the legislature.

Match between Zimmerman and Sanger for fabulous stakes contested—on paper only. No serious results.

National Columbian United Wheelmen's Association commenced the erection of a club house at Chicago.

Rev. Henry H. Kelsey of Hartford declared Sunday riding to be one of the "moral pitfalls for young men."

Hill Cycle Company, Chicago, incorporated. M. W. Hill elected president and F. T. Fowler secretary and manager.

International Cyclists' Association founded in London, with H. E. Raymond chairman and Henry Sturmev secretary.

L. C. Miller, in the Allegheny Cyclers' mileage contest, covered 6,712 miles, averaging ninety miles per day for the last month.

Mileage of Lake View Wheelmen, Rochester, exceeded 125,000 miles, Frank T. Wagner leading with 4,035 miles in six months.

The Pullman company and the management of the Hotel Florence declared that the Pullman road race could not be finished in the "City of Brick."

J. M. Amick, a California wheelman, attacked by a highwayman.

Morgan & Wright's factory, Chicago, injured by fire to extent of about \$10,000.

Minneapolis Cycle Track Association organized, with A. B. Choate as president.

Crescent Cycling Club, Detroit, moved into new club house near Belle Isle bridge.

Coventry Machinists' Company's American branch incorporated in Indiana.

Long Island Wheelmen commenced the erection of a \$5,000 annex to club house.

Vehicle Casualty Company, to insure vehicles and bicycles, incorporated in Minnesota.

Parkside grounds sold for \$54,000, netting stockholders about seventy-five per cent of their investment.

TRADE GOOD IN ROCHESTER.

New Wheels and Saddles Being Made—How Business Has Been.

Two bicycle factories in Rochester contribute to the enjoyment of the people as far as possible—one firm furnishes a life preserver in the form of a saddle, and another makes wheelmen at home and abroad look natty and neat by building riding suits to cover their physiques. The Rochester Cycle Manufacturing Company met with deserved and unqualified success. The high standard of its wheels was fully appreciated throughout the United States, and the company found no difficulty in disposing of its entire output. Next year, President Kenfield says, the company's plant will expand to twice its present size. Three new styles of wheels will be turned out therefrom, all of which will be lighter and built upon original lines. The Rochester light roadster will weigh thirty-eight pounds and will have 30-inch wheels; the Rochester scorchers will weigh thirty pounds and have 28-inch wheels, and the Rochester racer, on which Le Messurier made such an enviable record, will weigh twenty-five pounds. All of these wheels will have a long base.

Rich & Sager have made riders on different parts of this continent happy by getting them to ride on their pneu-

"The season just closed has been a very successful one," said Robert Thompson, the Victor agent, to the REFEREE man. "Business promises to be better with me next year, and in order to be prepared for any emergency, some extensive alterations will be made in my store during the interval. Our storage room will be enlarged and the facilities of our repair shop will be doubled. A riding hall will be added, making my place as complete as any in the state. Yes, we expect to do some business next season and have already contracted for a large number of wheels. Our line will be about the same, Victors, Ralighs, Credendas and the Buffalo Tricycle Company's line."

The Fort Scott Track.

We show herewith a plan of the new quarter-mile track at Fort Scott, Kas., upon which a very successful race meet was held October 6. At that time the track was too new to be very fast, but since then it has been carefully worked and already shows what it will be when it has thoroughly settled and been finally put in condition. A brief description of it has already appeared in these columns, but it may not be amiss to state here that it is almost an inch over a quarter mile in length, twenty-five feet on the back stretch, thirty on the finishing stretch and twenty-three on the turns,

matic feeling saddle. The firm first became widely known from the manufacture of the baby carriers, but it was the saddle which gave them national reputation. Thousands of wheelmen who used this important adjunct of a bicycle last year will bear out the above assertion. It is an actual fact that the popularity of the Sager saddle has so much increased as to warrant A. O. Very, the big Boston dealer, to contract for the agency in all the eastern states, including Pennsylvania, Arizona and the Carolinas. A few days ago one of the largest cycle manufacturers contracted for the use of the saddle on his wheels.

Francis L. Hughes, when interrogated upon the result of the trade for the year, replied: "The past season has been a very successful one. The general output has been fully as large as in previous seasons, and the tendency has been for higher grade wheels, very few purchasers in the city calling for anything cheap. Second-hand wheels, if sold at all, must be sold at a low figure to be disposed of."

C. J. Conolly's place of business is next to the canal; so, gentle reader, when you come to town drop in. Charley is one of "the boys" and the boys are all with Charley. They bought about 400 wheels of him this year. Conolly contemplates a great trade next year in handling as leaders the Humber, Rover, Monarch, Kenwood, Niagara and Imperial.

R. A. Punnett has had a most successful season in filling orders for uniforms.

The B. & S. wheel, made by Bettys & Smith, is, to use a common term, a hummer. There are several original features which commend it to the cycling fraternity.

which are banked five feet. The cinders which form the top dressing were obtained from a cement kiln, and are mixed with a fine quality of the cement for which Fort Scott is famous all over the country. The banking and drainage of the track were carefully looked after, and it is perfectly safe and ready for use within a short time after a hard rain. Next season a half-ton hand roller will be used to keep it in condition.

The grand stand holds three thousand people, and the bleachers one thousand more.

The construction of this track is a fair example of western push and enterprise. In April, 1891, there were but three wheels in Fort Scott, one of them an ordinary dating back almost to the days of the early Egyptians. Now, thanks to the energy of a few enthusiasts, the city boasts forty riders and a club, the Solid City Wheelmen, with a membership of twenty-two. Prior to July 15, of this year the idea of building a track had not occurred to anyone, but by August 15 a corporation had been formed to build it and it was under way. There is not a dollar of debt upon it, and the cyclists have not asked for a penny of outside aid. This is a record to be proud of.

The track is owned by a corporation composed exclusively of wheelmen, of which C. W. Penniman, the leading dealer, is president, Henry E. Harris, the newly elected chief consul of Kansas is secretary and Charles H. Gardiner is treasurer. G. B. Phinney, an accomplished engineer, had charge of the plans and construction.

Look out for Fort Scott in 1893.

MISCELLANEOUS INFORMATION.

The world's records for safety bicycles, from one hour to twenty four hours, are held by French professionals as follows:

1 hour—	24 miles 1,426 yds., J. Dubois, Sept. 23, 1892.
25 miles—	1 h. 1 min. 21 secs., M. Fournier, Aug. 13, 1892.
50 " "	2 h. 11 min. 10 secs., J. Dubois, Sept. 17, 1892.
100 " "	5 h. 2 min. 17 2-5 secs., " " " " " July 26, 1892.
12 hours—	230 miles 586 yds., " " " " " July 26-27, 1892.
24 " "	418 miles 1,320 yds., Stephane, Sept. 13-14, 1892.

These performances were accomplished on the Velodrome Buffalo, Paris, which has a cement surface.

The record for 100 miles on the road is 5 h. 27 m. 38 s., by T. A. Edge.

F. W. Shorland has ridden on the road 194 $\frac{1}{2}$ miles in 12 hours and 366 $\frac{1}{2}$ miles in 24 hours.

The record from Land's End to John O'Groat's, the extreme points of England and Scotland, is 3 days 23 hours 55 min., made by Lawrence Fletcher, Aug. 15-18, 1892.

At Minneapolis, Dec. 20, 1886, W. J. Morgan rode 234 miles, without a dismount, on a solid-tired ordinary.

In a race of six days, eighteen hours per day duration, in London, Sept. 1-6, 1879, Geo. Waller rode 1,404 miles 1,645 yards.

G. P. Mills, in a ride from Land's End to John O'Groat's, Oct. 4-8, 1891, rode 867 miles without sleep.

At Minneapolis, May 10-15, 1886, John S. Prince rode 1,042 $\frac{1}{2}$ miles in 72 hours, 12 hours daily for six days.

Jules Terront is reported to have ridden from Paris to Brest and back, 750 miles in 48 h. 23 m. 35 s., Sept. 27-30, 1891.

H. R. Goodwin, June 1-19, 1885, rode from Land's End to John O'Groat's and back and to London, 2054 miles in 19 days.

T. A. Edge rode from Land's End to John O'Groat's, 874 miles in 96 h. 40 m., and completed 1,000 miles in 131 h. 38 m.

In 18 years the mile record has been reduced 1 m. 10 $\frac{1}{2}$ s.; in ten years 3 $\frac{1}{2}$ s.; in five years 2 $\frac{1}{2}$ s., and in one year, 9 $\frac{1}{2}$ s.

W. Martin, in a six day race at New York, rode 1,466 miles, 700 yards.

The world's ordinary record is 2 m. 25 $\frac{1}{2}$ s. and stands to the credit of W. W. Windle. F. J. Osmond holds the English record, 2 m. 28 $\frac{1}{2}$ s.

*Made on geared front driver, or geared ordinary.

"He That Is Last ☉ ☉ Shall Be First"

And so with the Tillinghast tire. Although last in the field to solicit orders for '93, it is first in rank as a Pneumatic Tire. New valve, simple, and perfectly air tight, new construction, not a tire burst made since April 1. Pure rubber; weighs less than any tire on the market. Safe from puncture from glass and stones, and at a price below some inferior tires. Our racing tire, which is new this year, weighs less than two pounds each, and one on hand this day with a hundred pounds of water to the square inch inside, shows no sign of bursting or bulging. Let others say more if they can.

THE TILLINGHAST PNEUMATIC TIRE COMPANY, 59 CLIFFORD ST., PROVIDENCE, R. I.

"It's a solid, and will not leak or spill."

If you have not used the

RED STAR SOLID ILLUMINANT FOR BICYCLE LAMPS

You do not know how much comfort you can take with your lamp.

The Red Star Solid Illuminant is the only thing manufactured that will stay where it belongs—in the lamp. It has no odor, does not smoke, cannot shake out, and can be used in any lamp made, from the cheapest to the most expensive.

No extra fixings required for your lamp. It melts when the light is burning, and hardens when the lamp is extinguished. Try it and see how good it is. For sale by dealers in bicycle supplies. If your dealer has not got it, either get him to send for it, or send us 50 cents and we will send you a sample can free.

WILKESBARRE, PENN.

THE COVENTRY MACHINISTS' CO.,
Boston, Mass.

GENTLEMEN—I have used a "SWIFT" safety, bought of Mr. Johnson, of this place, ever since August, 1887, winter and summer with hard work. The wheel has just been re-tired, but not retired. I have broken one spoke since buying the wheel. It has given me ENTIRE SATISFACTION IN EVERY WAY. I am hoping to be able next spring to exchange it with you for a new "SWIFT" if I can get one with the cushion tire like that of the Columbia. Will you have any of that kind? If so, please send me circular.

Yours,

REV. H. E. HAYDEN.

PROVIDENCE, R. I.

THE COVENTRY MACHINISTS' CO.,
Boston, Mass.

GENTLEMEN—Your "SWIFT" cycles of last year (of which we sold over one hundred) gave such excellent satisfaction that we have decided to make an extra push on them the coming season, making them our leading wheel. We find that your wheels are much lighter, and, in fact, much stronger than most of the high grade wheels on the market. We have no fault to find with the "SWIFT" and cannot see much chance for improvement.

Yours very truly,

RANKIN & BRUCE.

We Make the SWIFT Bicycle.

It is a good one and pleases everybody. You may have a preference for some other make, still you are a reasoning creature, and open to conviction, no doubt. Your decision is an important one, and satisfaction or regret are sure to follow. A bicycle that for years has given satisfaction to others will give satisfaction to you.

Make a safe decision and

GENTLEMEN—Have given the "Model A" "SWIFT" that I bought of you a while ago, months' of hard riding over the roughest roads I could find in the state of Maine and Berkshire county, Mass., a'so other parts of Massachusetts. I think it is the strongest built, easiest and most graceful machine made.

A. C. BATCHELDER.

WASHINGTON, D. C.

THE COVENTRY MACHINISTS' CO.,
Boston, Mass.

GENTLEMEN—I desire to write you and let you know how well I am pleased with the wheel I purchased from you last year. I am pretty heavy weight (165 lbs.) and have given the wheel the wheel the hardest kind of usage. Have had several tumbles, and am truly astonished at the way the wheel has stood the racket. Several friends with whom I have ridden, they using other wheels, have had serious breakages caused by accidents much less severe than many I have experienced. While riding this morning with a friend, he on a new wheel, whose name I will not mention, my old "SWIFT" actually ran away from him on the coast, and I may say that it is my opinion, that for all-around riding, the purchase of a "SWIFT" insures not only one season, but many years of pleasure without incessant repair bills. Wishing you the success which your wheels deserve, I am,

Yours very truly,

ELSON C. HILL.

NASHVILLE, TENN.

THE COVENTRY MACHINISTS' CO.,
Boston, Mass.

GENTLEMEN—The special "SWIFT" came to hand in good order, with the exception that there was no saddle with it. The same I hope you have shipped by this time. As soon as the machine came I uncrated it and put on a saddle I had and rode the machine about 20 miles the same day with the boys. I was scorched by them all, and, of course, there was none of them "in it" with me. We have a rider here who has beaten every one that he has run against except the new "SWIFT," then he got left. I mention this to show how fast it is. As for the quality and workmanship there was never anything here to compare with it. * * * Man from St. Louis says there is nothing in the country to compare with it, and if your people would only make all your machines on the same line they would out-sell any machines on the market, and I think so myself.

Very respectfully,

J. S. ROLLER.

DAYTON, OHIO.

THE COVENTRY MACHINISTS' CO.,
Chicago, Ill.

DEAR SIR—I have never written you telling how pleased I am with my "Racer." I simply can't hold in. It is geared to 63, as you know, and since it runs easier than my old 60, I can stand it a little higher.

Now, can you send me a larger sprocket wheel? Mine has 18 teeth; 19 teeth will make it 66 1/2. This is about right.

Hoping you will answer at earliest convenience.

Yours respectfully,

HOWARD A. WHITESIDE.

GENTLEMEN—Your circular-letter, 26th, received in due time. Have been very busy and have deferred answering until I could give it the attention it deserves. I have carefully answered the questions, and hope they will be of benefit to you in your attempt to improve where you can. I, like you, find that no machine of any kind is perfect, and when a maker tries to make people think so, I let him alone, as it is a good time to wait until he wakes up and gets in the procession. I have been a rider since February, 1881, and in that time I have seen so many "perfect" machines totally relegated to the rear, that it makes me smile to hear this or that maker talk about perfection.

You know this is the first season I have handled the "SWIFT," and it has given me and my customers SPLENDID satisfaction. When I sold the first "Holbein" early in the season I was afraid it was too light for our roads here, and so told my customer, but as it was a "SWIFT," he was willing to risk it. It has never been to the repair shop and it was always ready for a go the whole of the season, and seems to be in perfect condition now. I am very much pleased to know that you will build them in the United States hereafter. I am thoroughly satisfied now that the "Holbein" with pneumatics is heavy enough for our rough Illinois roads with an average rider's weight.

Yours truly,

WM. E. SULLIVAN.

THE MANNESMANN TUBE CO., Ltd.

LANDORE, R.S.O., SOUTH WALES, ENGLAND.

Mannesmann Patent Weldless Steel Tubes

These tubes are the only ones made direct from the **Solid Bar** of Steel, and owing to the peculiar way in which they are rolled have a **spiral fibre**, and they are thus much **stronger and lighter** as also much more durable than any other **Weldless Tubes** in the Market.

The process of Manufacture, in which only the **best quality of Steel** is used, thoroughly tests each tube and ensures a **perfectly uniform metal and finish**, and an **absolute freedom from flaws**.

The tubes are **quite round, exact to size**, and **smooth** inside and out.

For **Cycle** purposes these tubes are specially well adapted, as owing to the many **great advantages** they can be used with a **thinner shell** than those of other Makers **without decreasing the strength**. They can thus be, and are already, largely employed for **Light Racing Machines** with **perfect safety**.

From THE ENGINEERING MAGAZINE, March, 1892.

The Mannesmann Steel Tubes from the success which has attended their use abroad, and the numerous uses to which they are adapted, continue to attract the attention of American mechanics and manufacturers. There remains no doubt that in these tubes an important addition has been made to previously existing materials, and that further uses will be found for them is certain, as soon as they are rendered available in quantity to American manufacturers. The beautiful finish of these tubes commends them at once to the mechanical eye. In this respect they are above comparison superior to ordinary iron pipes. They are seamless, and are the only existing weldless and seamless tube having a spiral fibre. Their strength in proportion to their weight exceeds that of any known tubing. On page 687, Vol. I. of this magazine, some statements with reference to the extraordinary lightness and strength of these tubes were made, and it was therein recorded that tubes $4\frac{1}{4}$ millimeters in thickness had withstood the enormous pressure of 2250 lbs. per square inch. What is needed to bring the merits of these tubes to the knowledge of American manufacturers is a proper and efficient commercial representation by some one capable of presenting them to the trade; as soon as this is done, it would seem that a wide and growing market must open for them. Some applications of the tubes suggest themselves. In the manufacture of bicycles they could be adopted with the result of getting greater strength with decreased weight. In pneumatic engineering, carried now to a point where enormous pressures must in many instances be sustained, they are superior to anything the writer has seen as a material for making connections, or for storing air under enormous pressure, such as is required for the projection of dynamite shells, etc. For boiler tubes; they seem to be specially adapted, and doubtless this adaptation is destined to create a large demand for them as soon as their qualities become generally known. The tubes being so thin, and possessing such a superior finish, may be found adapted to the manufacture of seamless kitchen boilers as soon as they can be supplied having the right diameter. The rapid introduction of these tubes into European industries is shown by the annual report of the Mannesmann German-Austrian Tube Works, which states that £157,800 in value of the tubes have been made, netting a profit of £68,400. It is also stated that great progress has been made in perfecting the manufacture and in producing tubes of larger diameters. They are now made of sizes ranging from $\frac{1}{4}$ -inch to three inches outside diameter, and of a thickness ranging from No. 23 to No. 10 Birmingham gage. Mr. D. B. McIlvain, of 111 Chambers Street, is in a position to answer any inquiries about these tubes which may be addressed to him, and give full information with reference to them.

WILLIAM READ & SONS

107 WASHINGTON ST., BOSTON, MASS.

Chicago Branch: MASONIC TEMPLE, ALBERT W. MOORE, Western Manager.

"HELLO, Jack! take it easy," shouted voice from behind me; "I want to speak with you." I accordingly back-pedalled to allow Frank White to come alongside me. It was a club run—one of the last of the season—of the Wanderers Bicycle Club, and as we glided through the exquisite scenery of Beauparc, along the beautiful banks of the historic river Boyne, my wheel seemed to bound along

"Just like a thing of life."

The roads were in perfect order, as level as a billiard table and as free from ruts or holes as a well-rolled garden walk. As we rode along by the beautiful Lambert demesne, the ripened verdure and beautiful foliage on every side, looking in its wealth of profusion as if no change of season could effect them, with no sign of the certain approach of that inexorable reaper, King Frost, whose advent in a few short weeks would most assuredly undrape the boughs to act as monuments of their departed beauty. But thoughts such as these do not dwell for any length of time in the mind of a bicycle youth on a club run. Little thinks he of the morrow, its duties or cares. He lives but in the exquisite enjoyment of the present, his warm blood coursing through his veins at a record-breaking pace; he thinks that life, like a pleasant club run, is a passing dream, and in the wild exuberance of the health-imparting exercise he unwittingly lays a claim to that peace which belongs on earth to "men of good will," and he finally concludes that the poet could not have known the enjoyment of bicycle riding who wrote that

"Man was made to mourn."

I wonderingly inquired of Frank, who was now by my side, what he wanted. He, with evident embarrassment, asked me if I had been favored with an invitation to the Fitz Patrick dance, to take place next week. I replied that I had and had accepted.

I will take this opportunity to state that Frank White was a splendid specimen of a young man, full of intelligence, handsome of face and form, and in the early twenties. He was possessed of fascinating manners and a witty yet inoffensive tongue, all of which rendered him a desirable companion. He was a favorite with the fair sex, but only in one instance had Cupid's dart punctured his heart. It was not unknown among his intimate friends that he had been casting "sheep's eye" in the direction of Violet Fitz Patrick, the daughter of an influential gentleman who resided in the same neighborhood, but how far he had gone none of us knew.

"Jack," he began, "you can do me a great favor if you will. You are the only one of the boys in whom I would fully confide, for I can depend on your honor,"

"Well," I interpolated, "I am obliged to you for the compliment, but what's up? Out with it, and if I can be of any service I am yours to command."

He paused for some time before speaking, and then said:

"Well, you know that I have a great regard for Violet Fitz Patrick, but some how I have never had the courage to tell her so. I feel so shy and foolish in her presence that I cannot speak to her as I can to other girls, and I am worried to know if she has any idea of my feeling toward her. You can be of great assistance to me, and if you promise to treat what I am going to tell you in strict confidence I will place my whole dependence on you."

"All right," I rejoined, "go ahead old man; you may rely on me."

"Well," sighed Frank—such a long sigh that it seemed to be drawn from his "rat trap" pedals—"I have decided to do something that will place me prominently before hers. If and family, and trust to results to ascertain her feelings toward me. Since Prof. Kennedy, the American mesmerist, came to this city, Violet has become an enthusiastic admirer of mesmerism, and its mystery has invested it in her mind with an importance almost superhuman. The other evening conversation turned upon mesmerism, and finding Violet intensely interested, I affected a similar interest, and in, I fear it must have been a moment of temporary insanity, foolishly led my listener to believe that I understood the science. I was quickly brought to a sense of the insecurity of my position by Violet, in a voice trembling with love or enthusiasm, I don't know which, asking me to give a brief exhibition, offering herself as a medium. The gods be praised! her mother objected, and for the time I saved my reputation. But the subject had become interesting and Violet asked if it would not be an unusual attraction to have a seance on the night of the ball. It was settled that it would be a very desirable addition to the entertainment. Now, Jack, you see I must either stay away and suffer disgrace or depend on you to get me out of my dilemma."

"In the name of all that's wonderful, how can I help you?"

"Well," he replied, you have made a reputation as an amateur comedian, and I am about to avail myself of your experience. You will be my subject, and all you will have to do is to act as if you were under the mesmeric influence, and instantly and implicitly obey me."

When I realized the ingenuity of this great scheme I felt "tickled to death," and we joined in a laugh loud and long. I promised to be at his house the following and successive evenings to rehearse a performance which it was decided should resemble as nearly as possible that given by the American.

The rehearsals which followed promised to be perfectly satisfactory. At last the evening of the ball arrived, and in due course we found ourselves in the hospitable Fitz Patrick mansion. To judge by the complimentary remarks of

the guests to my friend—who never for a moment left my side—there was the liveliest feeling of interest evinced in the expected exhibition. But his climax of delight must have been reached when the beautiful Violet approached him, and, shaking his hand, murmured soft words of gratitude for his goodness in supplying such a great attraction.

It had been arranged that when the time arrived I was to be seated among the audience and Frank was to make a short speech (just like Professor Kennedy) after which he would walk about the room seeking, as it were a proper medium, and as if by the merest chance to take me by the hand and lead me onto the stage. This was successfully carried out, and in his remarks he stated that his "subject," after he had been placed under his magnetic influence, would do anything which he (Frank) requested of him. Great applause followed, during which the quasi mesmerist bowed to the audience, and then turned a severe and stern countenance towards me and proceeded, by passing his hands before my eyes (same again as Prof. Kennedy), to put me into the desired trance. In this he was, to all appearance, quite successful. I was as the proverbial wax in the moulder's hands.

Needless to go into all the details of that performance. When he informed me that 'twas very warm, I at once proceeded to divest myself of my clothing,

THE FITZ PATRICK BALL.

but of course he just stopped me in time to prevent a general stampede of the lady element. He gave me cold water, said it was champagne, and I smacked my lips and wanted more. He informed me that I had drank more than was good for me; I attempted to walk but could not without reeling about. Then he reversed his lever, said I was quite sober, and I instantly became so. The applause from the delighted audience was frequent and enthusiastic, and for over an hour Frank continued to amuse them.

I had begun to think that we had had enough, and took an early opportunity of telling Frank so. But he was intoxicated with his success, and like the organist who denied the credit of part of the performance to the organ blower, he seemed to look upon me as a mere instrument, and his only thought now seemed to be how he could make out of me the most amusing exhibition. He knew I was at his mercy, for even should I betray him he still had the joke on his side and the laugh would be wholly against me. I felt crestfallen indeed as he ordered me in his dictatorial style, à la the professor, to stand on my head; gave me an empty wash basin, telling me it contained water, and requested me to wash

my face, after which he handed me the fire shovel, informing me that it was a clean towel, and of course the audience fairly howled as I blacked my face in the supposed drying process. I looked in vain into the eyes of Frank for relief as he proceeded to inform me that I was in a circus, and that this (a bedroom chair) was my bare-back horse. I went through the horse performance most satisfactorily, all the time wondering how I could get back at this fraudulent mesmeric fiend—for, gentle reader, these latter humiliating performances were not included in our rehearsals. All this time the audience was convulsed with laughter. Well, as soon as the imitation professor could obtain sufficient silence, he proceeded to his valedictory address (just like the professor, except that he did not ask the audience to come another night). He stated that he would now remove the mesmeric influence, and that immediately I would be in full possession of my faculties. During the applause which greeted this statement Frank turned towards me and, looking fixedly at me, snapped his thumb and second finger under my nose, at the same time saying sharply, "All right!"—repeating this several times. But during the conclusion of the address a bold, bad thought came to me and I determined to act up to it, no matter what the consequences would be. It therefore happened that when Frank snapped his fingers and yelled "All right," I gave no sign of the return to consciousness, but to the surprise of all showed no evidence of recognition.

Frank did not seem to understand how I could have forgotten that part of our rehearsals, and he reached over and grasped my arm, whispering as he did so, "That's all now, old man; we have given them enough," but I remained immovable, impassive, inflexible. Again and again did he yell "all right" and snap his fingers. I changed not. And now the spirit of mischief took complete possession of my soul, and with staring eyes and listless mien I stalked off the stage down to the audience, sat in the lap of a young lady and imprinted a loud, sounding kiss on her lips. This action, needless to say, was looked upon with consternation, but no one thought of restraining me at all, being fully persuaded that I was still under the mesmeric influence.

Several gentlemen approached Frank for an explanation, and hinted sarcastically that he had got himself into a serious dilemma. Poor Frank tried to say something, but his words conveyed only the blitherings of an idiot, and to add to his misery, Violet came to him with tears streaming down her beautiful cheeks as she sobbed:

"Mr. White, what shall we do? Oh, this is dreadful! It's my fault. Why did you ever attempt such a thing? What will become of us!"

During all this time I was doing my utmost to act my new part, as poor Frank kept following me about, for no other reason than to show the audience that he was doing his utmost to get things right, for he now knew that I was getting back at him for his humiliating change of programme. I walked about in an aimless way taking ornaments and stealthily transferring them to my pockets. I next crossed over to the piano, around which now gathered about a dozen terrified young ladies, who immediately darted out of the room. Arranging the piano stool just to suit me, I sat down, not knowing a note of music or having the slightest claim to a musical ear, and produced such sound as would have made Orpheus weep. I added to this a series of yells which I (rightly or wrongly) associated with the more violent inmates of a lunatic asy-

lum. No one as yet thought of interfering with me, indeed there were oceans of sympathy lavished at me, and on every side were utterances condemnatory of the cause of my supposed atrocious treatment. I was referred to as a victim of Frank White's ignorance, "criminal ignorance," one old bald-headed justice of the peace warmly told Frank. As for poor Frank, he seemed to have lost all his reason. He had taken refuge in a distant corner of the drawing-room, where he sat running his hands through his hair. He dared not tell the facts, and those who were appealing to him in my behalf were forced to the conclusion that he was at his wits' end and could do nothing to relieve me.

As I had no intention of giving up my end of the fun so soon, I stalked across the room, still working the glassy eye and the listless body act, and proceeded into the room near by into which I had observed the ladies retreat. I gently entered and turned the key in the door. This was a supreme moment, for I realized that this was the material by which this farce could be satisfactorily terminated. As soon as it was observed that door was locked, several young ladies

loudly screamed. I started in with extraordinary energy to give an exhibition of what I thought was a successful combination of the skirt dance and the can-can. The gentlemen were thoroughly alarmed at the frightened screams of the ladies, and attaching a grave importance to the occasion

"flops" which immediately introduced themselves into the can-can section of my performance (I never could do the can-can without falling) the door was forced, and four startled guests devoted their attention to holding the four limbs of what was by this time not unreasonably looked on as a raging lunatic. I was taken back again to the drawing-room, where a council of *Lunatico Inquerendo* was formed, also. During the discussion which immediately followed, Frank White entered the room fully dressed and carrying my overcoat and hat, and stated that he had decided to take me to his friend, Professor Kennedy, who was staying in a hotel not far away, and added that he had a hack at the door for the purpose. Several gentlemen offered to accompany us, but Frank would not hear of it. I began to realize that my term of office had very nearly expired, and determined to have one grand last flare-up. I accordingly watched my opportunity, slipping down on the carpet in the immediate vicinity of a chiffonier, and before I could be prevented I gave it a kick that sent the ornaments flying. This was the straw that broke the camel's back. Frank reached over and caught me by the nape of the neck. He didn't "take me up tenderly;" no, his hand closed like a vise, and I was placed in the hack and * * *

The following morning the doctor who attended me ordered leeches placed under my eyes to draw off the contused blood, and some kind of cream for my swollen lips; my right hand was bandaged, my knuckles were bruised and bleeding, and the thumb of my left hand was sprained.

Frank White remained in bed for several days and took out a fortnight of his vacation (he was employed in a bank) at home.

The hack driver—he called at both Frank's and my house to see "which of the two gentlemen" was going to pay for the damages done to the upholstery of the inside of his carriage.

Some day, perhaps, Frank and I may be friends again.

Neither of us ever received another invitation to the house.

It is a Veteran, Surely.

The first New Howe safety (No. 1) turned out is still as good as ever, and was at the Stanley show. It has been knocking about London ever since last April, when it was first used at the Surry meeting. It is chiefly remarkable for the number of good men that have ridden it and the excellent work it has done. R. L. Jefferson won twenty-one prizes on it, A. F. Illsley rode to victory twice, as did also W. J. Lewis, A. E.

KANSAS CITY CYCLING.

A Year of Progress and Prosperity Among Trade and Clubs.

The last twelve months has witnessed a wonderful growth in cycling in Kansas City. One year ago to-day Kansas City could boast of but one pneumatic-tired machine, now there are hundreds. A number of solid tired safeties were ridden and also a few cushions, but the popular mount was the good old ordinary. But what a change! Now the pneumatics are seen everywhere and an ordinary cannot be given away.

With the opening of the year came a number of new bicycle agencies. As early as February, the Interstate Bicycle Company opened up with a line of high-grade wheels. Its leaders were the Victors, King of Scorchers and Swifts. Then came W. D. Womack with the Union, Sterling and Imperial. Kingman & Co. added to their who'sale house the King and Queen of Scorchers, Ariel, Clipper and Featherstone's line of cheap wheels. The Keystone Implement Company came in for their share of the business with the Niagara, Sanspariel, Eagle and Western Wheel Work's whe I. Smeltzer secured the agency for Colum-

"run to Waldo." Of the longer runs the road to Olathe, Kas., is considered the best. There are few hills (for Kansas City) on this road and the surface is generally good. The tough runs are near the river and on the Clay county side, but the majority of the roads running east, south or southwest are very rideable.

THE KANSAS CITY CYCLISTS.

A little over a year ago about a dozen Kansas City riders met in the office of the Prest Hardware Company and organized the Kansas City Cyclists. Officers were elected, a constitution adopted and a flourishing little club started. Meetings were held at different places for a few months until the club was able to rent a couple of rooms, for it was the policy of the officers not to go in debt for anything, as the experience of former clubs in Kansas City had been disastrous.

Winter quarters were secured in the Real Estate & Stock Exchange Building and although they were not elaborate they were cosy and comfortable. In the spring, however, the club had grown to such an extent that larger rooms were necessary, and the present club house at 1002 E. Fifteenth street was rented. This is a modern house, three stories and basement, excellent location, with asphalt pavement at the door. The first floor is used as the club rooms proper, being devoted to parlor, reading rooms and smoking room. In the basement is the gymnasium and also a room for the storage of wheels. The second floor has three large rooms and is not yet furnished, but will in time be used as billiard and card rooms. The third or top floor is given over to the janitor and housekeeper.

The club now numbers about sixty active members. Card parties and other entertainments are given at intervals during the winter season. Club runs this summer have been well attended, and the club possesses some good road riders. There are about twelve centaurs in the club and, by the way, centuries are no "snap" around Kansas City, but are said to be equal to doubles in some other places.

The club also boasts of racing men who have surprised themselves and their friends, too, this season. Among them may be mentioned H. R. Warren, who holds the Missouri state record for the mile, made at Springfield July 4, also C. Kindervatter, with the two-mile Missouri championship, made at same place.

Others worthy of note are E. A. Hatfield, N. T. Haynes, F. F. Campbell, G. P. Moore, A. J. Henley, E. S. Hall and A. L. Brunner, and some others who may be surprised next year.

The officers of the club are as follows: J. P. Ridwell, president; N. T. Haynes, vice-president; E. P. Moriarty, secretary; D. F. Boyd, treasurer; H. R. Warren, captain; F. F. Campbell, first lieutenant; G. P. Moore, second lieutenant.

Lincoln May Build.

From a strictly business standpoint the Lincoln Cycling Club is one of Chicago's leading clubs and much nearer the actual building of a club house of its own than are some of the clubs paying rent for houses built for and occupied by them as club property. The Lincoln's enter the new year with a large balance in the treasury and every debt paid.

Home From a Hunting Trip.

Harry Wheeler, the eastern racing crack, arrived in Chicago last Wednesday from a western hunting trip. In Indian Territory he and a party of six friends shot nine deer and forty turkeys in a day's shooting.

Loughley and W. W. Arnot. T. A. Edge rode it in the North Road handicap, capturing third time, and it took part in three great team races. In September Edward Dance broke the Brighton-and-back record on it. These and still other victories have sown no marks of weakness on this first of all the New Howe machines last season.

Prizes for Illinois C. C. Men.

The Illinois Cycling Club's offer of three prizes in November for the highest runs, in contest, in bowling, billiards and pool resulted in much warm competition, although many of the club's best players failed to find time to compete. Joe Burton won the billiard contest with a run of twenty-four, receiving as a prize a billiard cue; Fred Strong bowled seventy-three at four back; Harry Chisholm captured the pool prize with a run of twenty-seven, and received a club pin as a prize.

Big Athletic Show.

The Cook County Wheelmen are in active preparation for an athletic entertainment just after the first of the year. Four tug of war teams have been formed of club members; two teams of lightweight and two heavy-weight. The contests between these teams for the championship will be a great feature of the entertainment.

bias early in the spring but relinquished it to the Midland Bicycle Company before the season was half over. The Midland company also pushed the Liberty and cheap wheels. C. B. Ellis, the only one who was not a novice in the wheel business, sold the Western Wheel Work's line only and says he has nothing to complain of.

The riders of Kansas City were somewhat surprised at Mr. "Cote Taille's" report of Kansas City, and suggest that he must have passed through in the night on one of those accommodation trains that are so pre-ominating in the west. If his report of other cities is equally as correct it must be indeed valuable.

One thing that has assisted in the rapid growth of cycling is the improvement of streets. Main, Walnut, Delaware and Ninth streets have been paved with asphalt. Many other streets have been paved with brick and gravel and the country roads have been improved materially.

One of the nicest little runs out of Kansas City and the one that is most frequently shown to visitors is the Waldo Park road. This is an extension of Troost avenue, and is macadamized for seven and one-half miles. The road runs due south and lies over hills that afford magnificent coasts. When all the other roads are bad, the invariable order is a

C. H. SCHUB,

Importer and Jobber of All Kinds of Cycles,
CHICAGO, ILL. : : AND : : SOUTH BEND, IND.

All Mail to South Bend.

It is doubtful whether there is such a thing in the United States as a model cycle track and grounds. Probably that at Springfield, Mass., is the nearest to perfection in all details, but it is far from what is demanded at this age in cycling. Experience has shown that a quarter-mile track is too small for the comfort of the riders or the accommodation of sufficient grand stand room. A mile track is entirely out of the question from the spectators' point of view and, consequently, that of the management part of the meet. With a mile track only the finish may be seen and as the track is usually sixty or eighty feet wide and the grand stand thirty or forty feet back, those even in the front seats are at least a hundred feet from the pole, where the finish in almost every race occurs. The numbers nor the riders can be distinguished when so much space is between them and the grand stand. A half-mile track, too, is a little too large for the benefit of the public, so that it seems to be the general opinion that a third of a mile oval is about the proper size.

DEPENDS UPON THE LOCALITY.

It does not follow that what one locality would require as to track and appurtenances would satisfy the demands of another. A small place could doubtless get along with a quarter-mile track if a big field of starters was not expected, and the size of the grand stand would, of course, depend altogether upon the number of people to be accommodated. The plans which are shown herewith, however, will be suitable for almost any size place, for the buildings, etc., can be made either larger or smaller. The track could be constructed under a similar plan. But to have thoroughly successful and interesting racing a third of a mile track should by all means be built. Those who have attended the race meets all over the country, and have seen all varieties of tracks, will testify to this.

CONSTRUCTION OF THE TRACK.

Track construction is something on which opinions differ; like everything else, what may suit one man will not satisfy all. Cement will undoubtedly

UMPIRE STAND

outlive almost any other material that could be put in a track, but for so large a circle as a third of a mile cement would cost a small fortune. Boards would be better, we think, and cheaper, for a track could be built with the latter for from \$3,000 to \$3,500. Macadam and

gravel tracks have not proved successful, because it seems impossible to make the surface material pack. Sand and clay mixed and loam seem to be the most desirable materials for the surface of cycle tracks. The famous record-breaking track at Springfield is made of sand and clay, mixed before being put down, and the kite track at Independence, Ia., is of loam. There is no rule for the foundation of a track; in fact, some of those that are made only of loam placed on the natural ground have proved to be quite as fast as those on which thousands of dollars had been spent for foundations. So long as the track has a good, substantial foundation from eighteen inches to two feet deep—of rock, stone or slag, well packed and settled—in which there

- A - ROOM
- B - SMOKER
- C - LADIES
- D - TOILET
- E - PASSAGE
- F - SEATS

SECOND STORY

is a liberal use of tile for drainage, there need be no trouble.

DRAINAGE IS NECESSARY.

To properly drain the track a gutter should be located at the inside edge of the same all the way round, with catch-basins at suitable distances, so that the

surface water may drain into a sewer—or under the track and out of the grounds. The tile drains under the track can be so arranged as to drain into these gutters.

SURFACE FOR TRACKS.

The surface of the best tracks has been laid in two or three parts. On the foundation from three to five inches of fine, dry clay is placed, and after this is leveled and rolled thoroughly a second layer of say three inches of sand and clay mixed is placed. This also is well leveled and rolled. Then the top dressing is put on. Dry clay and sand mixed is preferable, loam (particularly that from southern Indiana) is excellent, fine gravel will do under some circumstances and crushed stone screenings (top dressing) is a last resort. A small quantity of brick dust worked into the surface is most beneficial in making it smooth and hard. Before the surface is put down the other layers of material should be allowed ample time to settle.

After the surface has been thoroughly rolled, scraped and rolled—and this work repeated until the track is absolutely even and smooth—the track proper is complete.

THIRD OF A MILE TRACK.

The plan shown herewith is for a third of a mile track, with straights 300 feet long, 40 feet wide on the home-stretch, turns graduating to 30 feet on the back stretch (35 feet wide at the center of the turn). The proper banking for this size of track would be 1 1-2 feet in 7 (at the middle of the turns), as judged by the banking of the best quarter, half and mile tracks in the United States—those upon which the best records have been made in competition.

The banking should begin on the outside of the straights at a point about ten yards back of the commencement of the curve (at the pole it commences at the intersection of the straight and curve), and rise gradually to the half-way point on the curve, at which point it would have a rise of 1 1-2 feet in 7 (or 7 1-2 feet on the outside of a track of the dimensions shown on the opposite pages. This same pitch (1 1-2 feet in 7) should maintain for a distance of from sixty to seventy feet beyond the centre, when the graduation downward (on the outside of the track) to a point ten yards past the entrance to the straight is begun. The banking on the pole ceased at the intersection of the straight.

back of the line of measurement. As will be seen on the sketch, the radii for the track suggested are 184.62 feet and 219.62 feet, respectively, for the pole and outer edge, the eccentric being five feet.

JUDGES' STAND—NEW IDEA.

The judges' stand presented herewith is designed to be about fifteen feet long and ten feet wide, with stairs at the back leading to the upper portion. It is also

JUDGES STAND

designed to have the lower part some three feet below the level of the track and open in front. This would give the judges a better view of the finish of the race and do away with the necessity of stooping.

BULLETIN BOARDS.

Within the enclosure should be arranged large bulletin boards—as many as necessary so that all spectators may see them. These should be arranged to show on one side the starters' numbers

in the next race and the result of the preceding event, thus:

FRONT SIDE.

EVENT No. 4.	STARTERS.
1	11 22 37
5	15 30 38
6	21 35 40

REVERSE SIDE.

EVENT No. 3.	RESULT.
First,	No. 10.
Second,	No. 1.
Third,	No. 20.
Time,	2:40 2-5.

The board should be large, so that the numbers of a large field may be displayed, and it should be arranged to revolve, so that while one side is exposed to the spectators the other may be changed. Large cards, with eyelet holes, and numbers printed on them so that they may be hung on little nails or hooks, will answer the purpose.

A SERIES OF SIGNALS.

A very large gong should be arranged in the judges' stand to announce the last lap. Usually the bell is so small a rider cannot hear it when rung. A system of electric signals should be established. A bell in the contestants' quarters, operated from the judges' stand, would announce the number of the next race five min-

(Concluded on Page 88.)

A MODEL TRACK AND GROUNDS.

utes before starting time, and a second bell would be the last call. All who did not respond within five minutes could be barred from passing through the gates to the track. A system of signals from the quarter and half starting places could also be arranged so that when all was in readiness at the start and again at the instant the pistol was fired a bell in the judges' stand would ring,

THE GRAND STAND.

We shall not attempt herewith to furnish working plans for the grand stand, bleachers, judges' stand and umpires' boxes—we can do so upon application and at a nominal cost—because no two places would be apt to want the same size buildings. We have aimed to lay out the grounds and surroundings in a general way. By consulting the ground plan it will be seen that the space under the grand stand is carefully divided into dressing rooms (A), wheel rooms for racing men (C), wheel room (D) for the general public, bath rooms (G), a cozy little room (J) for the referee and a judge, which is entirely open in front excepting a wire fence and gate three feet high, and a space (B) to the left of the referee's box, about 10 feet deep and 60 feet long wherein the racing man may stand to witness a race in which they do not participate.

ALSO FOR CONTESTANTS.

A strong fence, about four feet high extends along the front, so that admittance to the track cannot be had from this retreat. On the other side of the referee's box is a similar place and through which contestants must pass in order to go to their starting places. Before passing through the last gate they should be compelled to give their numbers to the assistant clerk (located at K) in order that the judges and scorers shall know the starters and in order that their numbers may be posted on the bulletin boards. In the dressing rooms suitable cots, lockers, washbowls, lamps or gas fixtures, etc., can be arranged, while stands should be provided in the wheel rooms. It is designed that the privileges, if any be allowed on the grounds, be under the bleachers.

TWO STAIRWAYS.

Access to the grand stand is by two stairways beginning at the back of the building and ending directly among the seats, thus giving two large exits and entrances. It will be impossible to get into the stand except by these stairways. It will be noticed (see second story plan) that each stairway passes the second story hall way, off of which are dressing rooms, toilet rooms and a ladies' parlor (C), which is designed to be handsomely fitted up.

OTHER ARRANGEMENTS IF NECESSARY.

The grand stand can be a "double decker" if desired, but with the bleachers for those with general admission tickets and the grand stand proper for reserved seats the design here shown is apt to provide ample accommodation for the average community. A double decked grand stand would of course nearly double the seating capacity.

Carriage sheds would accommodate many who would desire to drive to the grounds and would want a place to shelter their rigs.

Two large gates, with ticket sellers' boxes on either side would be sufficient for any grounds.

SOME GOOD RULES.

Compel trainers and starters to leave the track within thirty seconds after the start of the race or disqualify the man started by the one disobeying the rule. The next time the rider would see that his starter obeyed the rules.

Allow no one on the track to train

unless his entry fees are paid or he is a regular member of the organization owning the track.

Have the numbers placed on the arms of the men so that those in the grand and judges' stands can distinguish the riders.

Do not allow wheels to remain on the track at any time; a room is provided for them under the grand stand.

Allow no one on the track, not even an official. The plans herewith provide convenient places for all.

When the track is being rolled or scraped muffle the horse's feet with old bags or cloth.

Put barb wire on the top of the fence to keep out the small boy.

Provide drinking places in the grand stand and bleachers.

Allow no one on the track except he be on a wheel.

Kansas Division Officers.

Kansas was one of the few states which changed officers at the late L. A. W. election. We present this week pictures of the new chief consul and secretary-treasurer.

Chief Consul Henry F. Harris lives at

HENRY E. HARRIS,
Chief Consul Kansas Division.

Fort Scott and is a corporation lawyer by profession. He has been a wheelman since April, 1891, and is proudest when called a "crank" on cycling. The new secretary-treasurer, Austin Hawley, of

AUSTIN HAWLEY,
Secretary-Treasurer Kansas Division.

Girard, is a warm friend of Mr. Harris, and it is likely that the two will pull in double harness most effectively. The latter commenced riding many years ago on an ordinary, and is an accomplished gentlemen and hard worker for the league.

ROVER'S TRADE CHAT.

He Talks About Tires, Length of Wheel Base and Other Things.

EDITOR REFEREE:—It is said a small air tire is less liable to slip than a big one. This is quite correct. The side slip of the average pneumatic is a source of great annoyance (and not a little danger), and considerable comment in the press and elsewhere. Yet a decided prejudice exists among certain manufacturers, who buy their tires, at that, and some riders, against a tire with corrugated surface, which reduces side slipping to a minimum, and has exactly the same effect when inflated to thirty or forty pounds pressure as a small tire, yet will accommodate itself to a sandy surface. This blind prejudice on the part of certain makers has been carried so far that the makers of those corrugated tires have had moulds made with no corrugations, so as to give them their choice. Strange to say, many of the biggest kickers on "those ridges," when told they can have smooth tires if preferred, place orders for the corrugated. If some people couldn't kick they couldn't live happily.

Speaking of small tires reminds me that many manufacturers are prone to use racing tires on their road wheels, presumably owing to a saving in weight of from two to three pounds. This is a great mistake. A rider will expect just the same service from that racing tire, if put on your roadster or light roadster, as of a full road tire. If using racing tires, call your machine a road racer and state it has racing tires. If you don't, look out for trouble. No racing tire yet made will stand a rutty road. The writer has seen dozens of them tried, and knows. If riders want them, all right; but call them by their right names. It will save you many letters and a great deal of trouble in the long run.

Some believe that a wheel with a short wheel base is more easily handled over rutty roads than one with a long base. I think the same way. For road use the long base is a dead goose. Machines built with 28-inch wheels and 42 to 43-inch base will be the favorites for 1893. If one or both wheels are thirty inches, a couple of inches more may do no harm, yet it seems to be the opinion of most rough road riders that forty-two inches is base enough. Personal experience convinces the writer of the soundness of this theory. The easiest handling road machine the writer ever tried for ruts and other rough surfaces was a 30x26, with 42-inch base. The large driver pulls out of a rut much better than a small one, while the small steerer can be lifted with greater ease, providing your weight is well back. Old Star riders will agree on this point.

To those who are not in an athletically fit condition, and who wish to travel as much at their ease as possible, a two-speed gear is undoubtedly a great advantage.—Sporting Life.

There is little doubt that a two-speed gear, if made right, is an advantage on the road. I have done some experimenting with it, but up to present time have seen but one which is practical. Most of them add from three to five pounds weight, are complicated and liable to get out of order. The writer is of the opinion that they will be used more or less in a year or two, where hills and rough roads abound.

Spooner, the ex-twenty-four-hour champion, wonders if men will be able to do their best in Denver in '94, should the league championships be run there. Let some of our 2:10 men go there and try

that atmosphere. I'll bank on their failing to do their best; and mark my words for it, they will respect Louis Block's 2:32 for the mile more than any 2:10 mile they ever did. It would be a regular picnic for Gerwing, Block and others to scoop everything, unless our eastern men have ten days' or two weeks' training in that rarified atmosphere. One mile above sea level is nearer heaven than most of our simon-pures have been.

I notice my old friend, that able writer (sometimes called a crank, but often nearer the truth in his crank assertions than otherwise), La Cote Mal Taile, has again taken to the road. His weekly articles are of manifest interest to the trade and rider alike. He agrees with yours truly on the prospects for '93, and seems to be of the opinion that something will drop. Sure. It was La Cote Mal Taile that induced the writer to engage as an agent in the bicycle business 'way back in '85; and Verax was responsible for inducing him to become an "angel of cycle commerce" a few years later.

ROVER.

A Very Desirable Line.

Warman & Hazlewood will place on the market a straight-framed ladies' wheel, tipping the scales at thirty-four pounds. This company's No. 14 gentlemen's is what the American market wants, weighing but thirty-four pounds all on and stripping to thirty-two pounds without removing the wheel. The head is ten and one-half inches, wheel base forty-six inches and depth of frame twenty-one inches. It is constructed of the very best English weldless steel tube and drop forgings throughout. The finish is up to the very highest standard.

Many Using Elliptic Sprockets.

L. M. De Vore, of the Elliptic sprocket wheel frame, was in the city last week. He names over a half dozen firms which have purchased shop rights—right to manufacture for their own use—of him. Among these may be named the Pope, Eagle, Marble, Ariel, Gormully & Jeffery, Imperial and other concerns, while many more are negotiating with a representative now in the east. About stories of former patents, in use long before, etc., Mr. De Vore smiles knowingly and says his first application for patent was filed in February of '90, allowed in July of same year, and that he is fully protected and will prosecute infringers to the extent of the law.

The Ariel for 1893.

The Ariel Cycle Company will manufacture 2,000 bicycles the coming year, not on paper, but in the factory. It was its determination to turn out half that number last year, and it fell only a few machines short. The company now has in the factory tubing for 2,000 machines, with all other material for 1,000 and the balance on the way. The Ariel of '92 was rather heavy, but stood the hardest abuse perfectly and gave splendid satisfaction. The Ariel of '93 will be a great deal lighter and will give as good service if six months' severe testing of a half dozen machines is any criterion.

Think it a Fad.

Englishmen laugh at Americans because they insist on having lighter machines on American "beastly" roads than Englishmen as a rule use on the boulevard roads of England. They believe it a fad that will soon die out, and that thirty-four to thirty-seven pounds is light enough for any man.

CYCLING ON THE COAST.

THE PAST SEASON A MOST SUCCESSFUL ONE IN RACING.

Many Fast Riders Developed—Coast Records Broken—New Division Of- fers at Work—Several Good Tracks.

The season of '92 should go on record as the renaissance period of the past-time of cycling on the Pacific Coast.

Last year the pneumatic tire was practically unknown—the cushion was king. Light wheels were not to be had. There were no specially laid bicycle tracks. There was no one who stood out above his fellow riders as the best man of the year. The opposite of all these facts is the case to-day. The pneumatic tire is in almost universal use. The demand is altogether for light wheels and the dealers are prepared to encourage and supply that demand.

Within a few hours' ride of San Francisco there are three excellent tracks built and controlled by cyclists. The number of new riders reaches a figure that few would believe possible. A local dealer exhibited his cash book to me showing from fifteen to twenty-five lessons given day after day in the art and pastime of cycle riding. There is practically no demand for medium-grade wheels, purchasers apparently wanting to be up to date in their mounts. Never since the California division was organized and its first chief consul, Robert M. Welch, placed it on a firm footing and made it a power in the sport throughout the coast, has it had brighter prospects or given promise of greater results than it does to-day.

Captain George H. Strong, the new chief executive, is a genuine sportsman of the highest type. He has been closely identified with athletics, rowing and cycling on this coast for many years; is thoroughly informed on racing and training, and is a competent timekeeper. His committees will be composed of practical men who are interested in the different branches of the league's work. He has no old scores to pay off, nor intimates whom he wishes to cloak with a little brief authority.

The secretary-treasurer, Mr. Ripley, is especially adapted for the office, as he is public librarian of Sacramento. He is secretary of a number of institutions and is immensely popular.

THE ASSOCIATED CLUBS.

In July the local clubs, acting on an invitation of the San Francisco Bicycle Club, formed the Associated Cycling Clubs of California. There are now eleven clubs in the association and it is proving a most useful auxiliary to the division. Its president, Thomas R. Knox, a prominent lawyer, and its secretary, Henry F. Wynne, are both earnest workers and have no other desire than the advancement of the sport. The association is composed of three delegates from each club. Owing to this basis of representation a small club has as much power as a large one in the workings of the association. Its objects are to bring the clubs into closer relation, to encourage and legislate for road racing and to establish championships at distances not covered by the league. It arranged an excursion to the San Jose meet and as a result the railroad company turned \$150 into its treasury, thus placing it on a good financial foundation at its very inception. Next year it will endeavor to arrange a special train for western wheelmen who may desire to attend the league meet at Chicago.

Chief Consul Strong recognizes the worth of the new association and wishes it to settle the petty differences of the clubs, leaving his office, as it were, a court of last resort, to which matters of unusual importance may be referred for settlement.

A RACING RETROSPECT.

The racing during the past season has been of the highest class. In northern California we have had eight race meets and they have been uniformly successful. On the Alameda track, which was the first built with banked corners and up to date in every particular, three of these meets were held. San Jose held two, Stockton two, and Sacramento one. The first meet of the year was at Alameda on May 30. The mile record was lowered three times in the first four heats of the novice race and from this it was anticipated that before the end of the season records would be placed at a point where they would compare favorably with eastern and English times.

Foster in the mile championship and spoiling his chance in the five-mile race by a bad fall. At this meeting he was not properly mounted, and did not ride as well as he should have done, yet it was evident that he was in the champion class. On July 4 he won his heat in the mile handicap from scratch, but finished behind Osen and Foster in the final. In the five-mile scratch he had a clean lead all the way up the finishing straight but checked momentarily within a few yards of the tape and Osen, coming with a rattle at the finish, just beat him out by inches. He showed his true form for the first time at Alameda on Sept. 5, since which meeting he has not been beaten. At this meeting he won the quarter-mile scratch and the mile handicap from scratch. His next appearance was at San Jose, when he won the half-mile safety championship and the five-mile scratch. On the latter race a time limit of fifteen minutes was placed, and it had to be ridden twice,

though this were not sufficient, a change of machines filled his cup of bitterness to overflowing and he has not since ridden with anything like the dash of his first races. I believe he must resemble Sanger, of Milwaukee, very much in temperament, as a recent article in the REFEREE on this rider seemed to have been written word for word for Foster. He is undoubtedly a good rider, but has an extravagant opinion of his own powers.

D. L. BURKE.

D. L. Burke of Los Angeles has had a very successful season, and is the best man of the year in the south. His times are much better than those of our local riders, but owing to the fact that proofs of their correctness have not been submitted to the racing board, they have not been officially accepted. The only line we have on his form is the fact that he has beaten Foster in the fastest time that rider has ever shown in a race. I first met Burke in June, 1890, since which time he has improved wonderfully. He was then a slashing big rider, mounted on a 57-inch Victor, and with the heavy style of the road rider. I interested Harry Leeming (than whom no better trainer ever lived) in him, and before ten days he had changed his style completely and had acquired the light style of an old racing man. He raced at San Jose and lost the mile championship to Henry Smith through not hearing the bell in the last lap. He sat up all the way around and did not make an effort until too late. The last lap took forty-two seconds. In his next race, a half-mile, he rode fast for the first half of the last lap, and then slowed down, as he was running away from his field. This lap occupied thirty-six seconds, and this on a slow track. He is considered to be better than 2:20 now, and if he improves on this form will sweep the board. His general tactics are to run men off their legs, but this will not do with a rider like Edwards, who is a stayer as well as a sprinter.

OTHER GOOD MEN.

G. A. Osen, the last of the quartette of scratch men, is something of an enigma, as he occasionally comes out and wins a brilliant race and then sinks for the time being into mediocrity. He is six feet four inches tall, and it seems impossible to tell when he is in condition. At one time he seemed unable to stand the pinch of a close finish, but this year he won three races, which proved conclusively that he must be game, as in each case he had every inch of the last lap disputed with him.

Grant Bell, through lack of systematic handling, has not been successful. He is a most sportsman-like rider, and invariably does the major part of the pacing.

Of all the racing men, Fred Magill of the Alameda Bicycle and Athletic Club, has been the most shrewdly handled. To-day there are not five persons who know what he is capable of. He won his novice race and several handicaps, not having been entered in any scratch races. The handicapper invariably placed him near the limit. He is taking moderate exercise this winter, and has already thickened up some, so that next season he should be well prepared for track work.

The only drawback to the racing has been bad handicapping, but as next year this branch of the sport will be in proper hands a vast improvement is looked for. During the season many riders refused to turn out in their heats of handicaps, as they saw they had no chance, as nearly every handicap developed into a scratch race before one lap had been ridden.

AN ENRHRISING CLUB.

The Alameda Bicycle and Athletic

WILBUR J. EDWARDS,
Champion of the Pacific Coast.

This promise has not been fulfilled, however, as some of the cracks commenced to display headwork of a very poor quality and set all the riders imitating them. In many instances this so-called head work has been ridiculously applied. Men who had no chance of winning would wait behind men who could beat them several seconds in the last quarter, whereas, had they gone all the way through they might have found a soft spot in the sprinters and scored.

THE COAST CHAMPION.

Since F. D. Elwell retired we have had no rider who stood out above the others until this year, when Wilbur J. Edwards, of the Garden City Cyclers of San Jose, stepped into the niche. He made his first appearance of the year at Alameda on May 30, riding second to

Edwards winning both times. He finished his season's racing at San Jose on Nov. 24, when he won both the one and five-mile safety scratch races.

Edwards is a perfect picture when in motion on his wheel. He is a great favorite with race goers and justly deserves to be, as he is modest and unassuming and takes his victories as becomes a champion. Next year, if properly handled, he should add to his list of firsts, and if beaten, it will be by a rider whom he has not as yet met on the path.

SOMETHING LIKE SANGER.

When the racing season opened W. F. Foster was thought by many people to be invincible. Before the season was far advanced, however, he bore evidence of being overtrained; to which was added the bad effects of two severe falls, and as

Club has done much for the sport during the past year. The track on the club's picturesque grounds, just on the edge of

will be on the same lines as the above machines but will weigh only twenty-one pounds. They feel very proud of

THE ALAMEDA TRACK

the bay of San Francisco, is probably as fast as any in the state, and will be much improved next season. The club bears the reputation of holding the best-conducted race meetings in this part of the country, and it is because of the great care taken in the selection of officials. Only competent men are asked to officiate, men who understand the duties in connection with which they are invited to act.

The club has played a far more prominent part in the stirring events of the past year than many people think, and with its powerful and influential membership has a long period of usefulness before it. Where many of its members have given their time and energies to the work to the club, comparisons would be invidious, but H. R. Williams, Jr., deserves more than passing mention. All through the year he has borne the burden of secretary's office, and has been an earnest worker in any direction the club's interests demand.

Preparations are already going on for next season, and a general advance is anticipated. Several new tracks are spoken of; it is known, however, that race meets will be conducted on a larger scale, and an effort will be made to popularize the sport and interest the general public.

One excellent result of the formation of the Associated Cycling Clubs has been to bring the clubs into harmonious relations, something that has been sadly needed during the past eight years of strife and bickering, during which period there is no doubt that the growth of the sport was retarded. The youthful element no longer controls the workings of the various clubs or of the league, and it is well that it is so.

However desirable young blood may be in any organization, it is the old head, grown conservative with years of battling with men of the world, that makes the best director of an organization that is full of energy, and asks but to be shown how that energy can be applied, to obtain the best results.

The Lovell 1893 Line.

The Lovell Diamond cycles for '93 will be a great surprise to the riding public. These wheels, as every one knows, are manufactured by the John P. Lovell Arms Company of Boston, and have been sold by them for the past three seasons. The new model frame is of the Humber pattern; steering head nine and three-quarter inches; wheel base, forty-four inches; front wheel, 30-inch with 1 3/4 inch tire; rear wheel, 28-inch with 2-inch tire; weight, thirty-six pounds. This same wheel, stripped and fitted with light pneumatic tires, will be known as the light roadster and will weigh about thirty pounds. They also expect to have their racer ready about the middle of the season. This

efficient room between the handle bars and saddle for mounting and dismounting, as it has been a great fault with many ladies' wheels that they are built so close that it is difficult to mount and dismount gracefully. The machine weighs complete thirty-seven pounds. The wheels are 28-inch and are fitted with 1 3/4-inch tires. They also have an excellent line of boys' and youths' safeties.

The 1893 Eclipse.

The '93 Eclipse promises to be one of the leading wheels of the season. It is built throughout with the finest quality of steel; drop forgings are used for all connections; shells, cones and all bearing parts are cut from tool steel and

finely finished and no pressed shells are used at all. The spokes are swaged down from number nine to number thirteen, and the threads are rolled on. The rims are perfectly turned and true on all edges; crank is the patent of the Eclipse company and has the advantage of using no crank pin to be hammered on, but a screw with a nut, a simple turn of which takes up all lost motion and insures a constantly tight crank; pedals are dust proof; tires of Morgan & Wright style of the finest quality of rubber, tough and yet resilient; saddle is the Eclipse pattern; handles of the drop pattern with cork and rubber combination grips; steering head, eleven inches; wheel base, forty-four inches; weight, thirty-four pounds; wheels are twenty-eight inches in diameter.

Think Charges Too High.

Some Chicago manufacturers and dealers are disposed to grumble at the

some profit. They say that with the cost of decorating, transportation and expense of attendants, Chicago manufacturers cannot exhibit at the show for much less than \$500. The manufacturers, they say, will some day resist and run two great shows themselves, one in the east, the other in the west, of which the expenses will be little more.

Lumsden to Remain a "Pure."

Lumsden denies most emphatically that he intends riding for cash or even a maker next year; he can't afford it, for he prefers to pay attention to business rather than devote his time to racing. The Chicago man says this decision is final, notwithstanding the fact that people think he will be one of the first to flop.

From the Sunny South.

The Houston Bicycle Club is no more, but springing from its ashes is the Magnolia Cycling Club, an organization with forty-four members and about twenty applications on file. It will shortly erect a handsome club house and fit same with all the modern appliances. "Here in the Sunny South," writes the captain, "our cycle season lasts twelve months in the year, and we expect to keep up the interest with an occasional race both on track and road, and also smokers and euchre parties, etc.

Sieg's Repair Kit.

The new Perfection repair kit, "for the salvation of all pneumatic tires," has met with a cordial welcome by the trade everywhere. The Charles H. Sieg Manufacturing Company says it is over-run with orders for them, several prominent makers having ordered in 5,000 quantities, intending to include a kit with every wheel they deliver. This repair outfit is packed in a metal case and is a convenient pocket companion.

The Winton Bicycle Company.

The Winton Bicycle Company, Cleveland, O., is manufacturing a full line of strictly high-grade bicycles, including a full roadster, which will weigh, all on, forty pounds; a light roadster, stripped, thirty pounds; a ladies' wheel, weight complete, all on, thirty-eight pounds, and a racer that will weigh less than thirty pounds. The distinctive features of the Winton are the double diamond frames strongly braced, new pattern anti-friction ball bearings. Garford saddle and Winton pneumatic tires. The ladies' wheel has a double loop frame, long steering centers, ball bearing and is made as light as they think practical with this style of wheel. All patterns of the Winton will have twenty-eight inch wheels fitted with the new Winton pneumatic tire. The Winton people have also built a racing tandem and triplet of very original design, the tandem weighing less than forty-five pounds and the triplet about seventy-five. The Winton

OF SUCCESS!

'WE HAVE REACHED IT.'

ANNOUNCEMENT.

We desire to announce to our friends and customers that, owing to our rapidly increasing business, we have found it advisable to incorporate. The style of the new corporation will be

THORSEN & CASSADY COMPANY.

The management of the business will be in the same hands as heretofore, and with largely increased capital and facilities, we assure our friends of Lowest Prices, Prompt Shipments and Courteous treatment.

We shall continue, as heretofore, **WESTERN DISTRIBUTORS** for the

Western Wheel Works' Cycles.

We have also just closed with the **WARWICK CYCLE CO.** by which we secure control of their line for the Entire West.

Our line comprises the most desirable of **Medium** and **High Grade** Wheels. Dealers and Agents alive to their interest will do well to correspond with us **AT ONCE.**

THORSEN & CASSADY COMPANY

60 and 62 Wabash Ave., Chicago.

A Christmas Gift...

We have in course of construction, a very valuable Xmas Present which we intend to send to each and every bicycle enthusiast who will send us his name.

It is a model of beauty, and an article that should be before every intending purchaser, as well as every good agent and dealer, for the reason that it contains some very valuable information.

You will certainly agree that a

"CATALOGUE"

is a good thing when filled with the right kind of material, and a glance at ours will disclose the fact that we are, (as usual,) in the "HEAD SET!"

REMINGTON!

Three Patents For 1893.

LIGHT ROADSTER,

(Actual weight, 32 Lbs.)

ROADSTER, 44 Lbs.

LADIES' WHEEL, 42 Lbs.

Prices reasonable. Material the best obtainable. Workmanship unsurpassed. Mannesmann tubing. Warwick Hollow Rims, and a variety of the best Pneumatic Tires to select from. Send for Catalogue.

REMINGTON ARMS CO.,

315 Broadway, N. Y.

WORKS at Ilion, N. Y.

Many a time has every man and woman had experiences which, in his or her own mind, should be preserved in print so that others may laugh or cry over them. I prefer to keep mine to myself, however, and only now and then tell them to my friends.

To-night, seated in my den, blowing great clouds from my meerschaum, a feeling of perfect happiness steals over me. What a grand spin I had this afternoon over fifteen miles of the best macadam that old England boasts! The fine air put new energy into me with each succeeding mile I covered. All you who have thus far been so unfortunate as not to have known the exquisite pleasure that the "bike" affords, try it without delay, and after a spin tell me if your brain is not clearer and your appetite better, and if there has not come to you the best night's rest you ever enjoyed.

But stop. If there is one thing more than another I am a crank about it is the bicycle, and when I start to talk of its delights I never know when to stop.

As one cloud after another gradually floats away, making the atmosphere a little more and a little more nasty to a woman's way of thinking, the story of Jim Lister's life comes back to me; why, I do not know. It is not a common story by any means. Would you like to hear it? Well, here goes.

About two years ago, on just such a night as this, I was staying with a man most peculiar in appearance and manners. His height had been nearly six feet, but now, owing to certain causes, he was bent and shrunken to little more than half that size. To make a long story short, my friend Lister was a physical wreck, a confirmed cripple, and

crutches or a rocking chair were his constant companions. His manner was that of a man of intelligence and refinement.

When I had first met him, from a feeling of pity at first I was attentive to his remarks. I

gradually found myself being drawn to ward him, however, for his conversation was brilliant, and in the end I became his frequent guest.

After pipes were lit on that evening a couple of years ago, Lister remarked that I was the first man with whom he had been at all intimate who had refrained from asking how he had gotten in such a terrible condition, and he added: "If you care to hear about it I somehow feel as though I ought to tell you the story." Of course I wanted to

hear it, for I had often wondered how he came so and worried over it not a little, and so I told him.

"Well," said he, "it was this way. When I was twenty-five I had a fair income and a pretty wife, and Nora, who has just said good night, was a baby. At that time I was a by no means bad bicycle racer. I could make a very pretty spurt, and I spent my time going from meet to meet, always backing myself pretty heavily and with good returns.

"At a meet where I had been pretty successful I met a chap who was doing about the same as I, though there was about him more of what is conveyed to the cycling mind of to day by "professional." He was not at all good looking, but he was a very fair talker. Well, he seemed to take a fancy to me and said he had won quite a lot of money on me. We became more and more intimate, and though my friends cried this new acquaintance down I championed his cause, had him to dinner and introduced him to my wife.

INTRODUCED HIM TO MY WIFE.

"Luck turned against me at last, and, try as would, I could never get better than third place, which meant nothing in itself but was hard on the pocket. Only now and then would a race come to me. I plunged on the horse races but had no luck. Things at last came to such a pass that I determined to wait for some big handicap, where I would be likely to get a good start, and then to pile all my cash, in hand and to come, on the result. At last my time came. It was a big two-mile handicap, and for once I found the handicapper had let me in with a big allowance, of course on my constant bad form of late. To make things doubly sure, I settled down to the hardest kind of training, at the same time watching every chance and gradually getting my all on at odds of from 30 to 40 to 1.

"At last the day came, bright and clear, and by the time my race was called the light breeze that had been blowing had entirely died away. Twenty-five men were on the card to start, and they were all bigger favorites than I. My

supposed friend encouraged me in every way, and said all his money was on me, but from the way he said it, I do not know what else, I felt that he was lying and wanted to see me beaten. I was on my way to my mark, however, and other thoughts quickly drove that from my mind.

"Are you ready?" A crack from the pistol and we were off. I overtook those ahead of me one after another easily enough, and soon had a dozen yards between me and the limit man. It was not hard for me to see that, while the scratch man was coming through the bunch in good shape, he would never be able to make up his distance on me, and, satisfied that I could do so safely, I let up a little, while keeping up a steady gait. The scratch man shook off one after another, finally pulling clear of the ruck altogether, and then came for me. I let out a link, however, and he gained nothing on me. It was evident that I

THE INDIVIDUAL WAS SEEN TO FALL

was to be a race between this man and myself, and the others were fighting for third prize only. There was practically no change in our positions for a mile and a half, and as we passed the tape on that lap I got a cheer from the grand stand which made me think I looked like a winner from that point of view at any rate. Certainly I felt like one, and on the next to the last lap I let up a trifle.

"As I shot out of the turn into the backstretch I saw my friend standing at the edge of the track, looking remarkably pale and nervous for a man with money on the leader.

"Ride, man, ride!" he yelled as I passed him, "Coster's at your wheel!" I didn't stop to look back, never doubting the man's honesty of purpose. Down went my head as I gripped harder the handles of my ordinary (it was before the days of the safety), and dug away at my pedals. I felt one of these give way, and that's all I knew of the race.

"Of course I lost the race and my reputation and money to boot, which was worse. For weeks I was laid up, the mighty M. D. said with a bad case of typhoid fever, due to overtraining, but there was a good deal of broken spirit in it, too. To make matters worse, my poor wife was taken suddenly ill and died before I was well.

"When at last I got on my pins once more, my one idea was to hunt up that 'friend.' From some men who saw him that day I found he had put all his money on the only man who stood a chance of beating me, and who, thanks to my tumble, did win the race. It was generally conceded that he had sawed my pedal pin almost through, knowing that the force brought to bear on it, in such a case as was brought about by his yell at me, would finish the work the saw had begun.

"My one thought was to get even, and at last my time came. He was entered

in a half-mile handicap, and I knew it would be a hard ride from start to finish. Luck had been with him so persistently that he had decided to put his all on this time and stop. The papers next day described the race as follows, and taking from his pocket a newspaper clipping Lister read aloud:

"The half-mile handicap was considered a gift for Mr. McLan. He overtook one after another of those ahead of him very handily, and was winning apparently with ease. He was entering the homestretch with a final spurt when a seedy-looking individual was seen to fall forward upon the track directly in McLan's way. McLan's wheel struck him, throwing the rider violently against the rail, and both were carried from the track unconscious. If the seedy individual recovers, which is extremely doubtful, he will be a cripple for life.

"Well, here is the seedy individual, and McLan is in an insane asylum from the injury to his head."

Such is the story I heard.

RYON.

Bidwell's Retail Business Sold.

Under date of Dec. 14, the George R. Bidwell Cycle Company writes us as follows: "We beg to advise you that we have sold to Mr. Julian R. Tinkham, who formerly acted in the capacity of manager of that department, our retail department, comprising the renting, storage, repair, and retail sale of the Tourist bicycles in New York City.

"We shall continue the wholesale bicycle business and the manufacturing of pneumatic tires, devoting our entire time and attention to the above and to the marketing of the Tourist high-grade bicycle and a line of medium grade bicycles, manufactured for us by the St. Nicholas Manufacturing Company of Chicago, for whom we are acting as sole eastern agents.

"Our general offices will be, as heretofore, in our building, 308-310 W. Fifty-ninth street.

"We have decided on this step for the purpose of concentrating all our attention upon our wholesale and manufacturing business, which has grown to large proportions during the past year."

N. C. U. W. Association.

Wheelmen intending to come to the World's Fair should put themselves in communication with the National Columbian United Wheelmen's Association, L. D. Taylor, secretary, 959 West Madison street, Chicago.

The object of this association is to provide comfortable and commodious quarters, specially adapted for wheelmen during a time when suitable accommodations are difficult to obtain; to concentrate wheeling interests; to enable cyclists to bring their wheels to the fair; to provide reasonable rates for sleeping and eating accommodations, and secure rooms in advance; to provide a headquarters for all wheelmen during the fair and L. A. W. meet; as well as a place of assembly and conference, and to aid the cause of good roads in every way possible; to hold weekly receptions and to extend the acquaintance of visiting wheelmen; to make Chicago the cycling center of the world in 1893.

Application blanks for membership are now ready and should be procured early.—Adv.

Will Locate in America.

J. H. Ball, manager of the Nottingham Machinists' Company, of Ilkeston, Eng., is in Chicago. His company will shortly establish an American factory, for which a location has not yet been chosen. Mr. Ball is selling the Chicago trade the Ball hollow rim, very light and strong.

Roy Keator has secured a position in the business department of the *Inter Ocean*.

A PHYSICAL WRECK.

These are Some of Us, but WAIT till You See the REST!

Racers, 24 lbs. ~~~ Scorchers, 31 lbs. ~~~ Roadsters, 36 lbs.

and our LADIES' is the

Finest Machine Built

OUR IDEA OF IT....

Is Not . . To risk our reputation on a wheel without first knowing what it is.

Is Not . . To make it extreme in wheel base.

Is Not . . To try any new experiments in construction—they are dangerous.

Is Not . . To sell our wheel on "fake" principles or ideas.

BUT IS . . To have our wheels the SIMPLEST in construction, use the BEST material, build them on correct mechanical principles, finish them the best, give a LIBERAL DISCOUNT, treat our CUSTOMERS RIGHT, and we'll do business—

See If We Don't!

We have a pretty
LITTLE PICTURE BOOK
and it wont cost you a cent.

TOLEDO BICYCLE COMPANY

~~~~~ TOLEDO, OHIO. ~~~~~

We have endeavored to compile a complete list of the cycling clubs of the United States, together with the addresses of club rooms, names of president and secretary, date of organization and number of members. To this end we mailed requests for details (reply prepaid) to the secretary of every club of which we could find any record. To those who failed to reply we sent a second, and many times a third notice. Those clubs whose secretaries ignored these notices have been dropped from the list, except those concerning which we were able to obtain all or a part of the desired details from some other source.

## ALABAMA.

**Birmingham Cycle Club**, Fourth and 19th st., Birmingham. Org. March, '92. 35 members. J. A. Smith, pres.; F. H. Koreske, 117 North 17th st., sec.

**Social Wheelmen**, South Bend. Org. Jan. 15, '90. 32 members. Edward Baer, pres.; Frank J.

## TWO WAYS TO BUILD BICYCLES.

### One Way:

Buy the pieces,  
 Forgings here,  
 Tires there,  
 Saddles anywhere,  
 So on throughout.

Put these pieces together in a so-called bicycle factory to imitate, as nearly as may be, some successful model. Cover with nickel and enamel and call it a bicycle.

Victor Bicycles are NOT Built That Way.

### Another Way:

A complete bicycle factory  
 Equipped better than any other,  
 The finest machinery,  
 Only best material,  
 A corps of experts in every department.  
 The entire bicycle from A to Z made on the premises,  
 And guaranteed by a company responsible beyond all question.

Victor Bicycles ARE Built That Way.

## OVERMAN WHEEL COMPANY,

Boston.

Washington.

Denver.

San Francisco.

P. S.—Did you ever notice that the makers of Victor Bicycles talk about bicycles and mechanical devices which improve the machines, and do not try to change the subject by talking about bicycle races. It is a good way to divert attention, but it has very little bearing on the main question, that is, the question as to what is the best road bicycle to buy. If you are a racer don't buy a bicycle at all. Get one given to you for nothing. If you are a rider buy the best machine you can find without regard to any maker's advertising schemes. Records come high, but high-grade bicycles come higher.

May 12, '92. 40 members. W. L. McArthur, pres.; R. J. Miller, sec.

## The Perfection Repair Kit

Is being adopted by many of the best bicycle makers. They should accompany every pneumatic tired bicycle. Send for sample and quotations on large lots.

FOR THE SALVATION OF PNEUMATICS.  
THOUSANDS HAVE BEEN SOLD SINCE DEC. 1 - 92.  
IT IS FAR THE BEST KIT AND IS AS GOOD AS GOLD.

PRICE BY MAIL - 50 CENTS. ORDER ONE

CHAS. H. SIEG MFG. CO. CHICAGO.

(THE ORDERS FOR THIS OUTFIT HAVE BEEN COMING IN  
SO RAPIDLY THAT WE CANNOT BEAR SHORT OF ONE  
PIECE AFTER RECEIPT OF ORDER. PLEASE NOTE.)

BICYCLE MAKERS SHOULD CORRESPOND WITH US  
AND GET QUOTATIONS ON THOUSAND LOTS.

**No Large Orders Accepted After Feb-  
ruary, 1893.**

They are exactly what every cyclist wants, and sell like  
HOT CAKES.

CHAS. H. SIEG MFG. CO.,  
CHICAGO.

## BRANDENBURG AIR TIGHT PEDAL

Is new to the trade, but will soon be well known, as it will be fitted to some of the finest imported, as well as American bicycles. Easily adjusted, Very light. No dust caps, cones, or nuts. The only perfect pedal ever produced. See it and you will be convinced. When you buy insist on having the machine fitted with this pedal. Manufacturers and dealers can get it.

The Norman Wheel Company of Philadelphia has adopted maroon as the color of its rims. If we mistake not, maroon is already in use.

## ZIMMIE SCOOTED.

*He was Afraid of Mr. Raymond or the Spike Tail Suits.*

If there ever was such a being as a "pure amateur" in cycling, then Henry E. S. Itonstall, broker of Wall street and resident of Elizabeth, N. J., will about fill the bill. Here is a man who is head and shoulders in love with the sport in all its phases. As a racer he can reel off his five miles in quick time, and as a road devotee he ranks with any. Mr. Saltonstall is one of the valued members of the Elizabeth Athletic Club, an institution which ranks over any other in America for the size of the town, and the writer has seen about all of them. Everything that goes to make a first-class club is included in the outfit of the E. A. C. Mr. Saltonstall wanted to show his appreciation for the sport that had given him so much pleasure, so offered a \$1,000 prize for international competition—and there the true amateur spirit crops out again. Mr. Saltonstall paid the REFEREE's eastern office a visit and wished to make the point that the prize was to be for international perpetual competition—and not given right out the first time. Of course some of the

H. E. SALTONSTALL.

speedy ones will not favor that clause much, but I trust the generous, sportsmanlike offer will win their regards. To further testify his love for the sport and those interested in it, the Elizabeth man invited some thirty people to a dinner last Thursday night. Among the invited ones were H. E. Raymond, chairman; Henry Crowther, A. A. Zimmerman, L. C. Boardman, Joseph McDermott, and others of more or less fame. A funny thing happened just before the dinner. A. A. Zimmerman had arrived an hour before Sydney Bowman and the writer. After visiting Mr. Saltonstall he learned that we had not arrived, so started out to look for Bowman (so he said). Instead of that the "skeeter" scooted, and took either a train or some other conveyance for New York. Poor Bowman was in a flurry and hunted the town over. There was either one or two things that frightened the champion of champions—he either got wind of Raymond's coming or saw the generous display of shirt fronts. Zimmerman may have heard that the writer was to speak on "Our Old-time Professionals," and he possibly thought the orator might get mixed in his allusions. Anyhow the incident was a funny one, and much in keeping with Arthur Augustus' bashfulness. The speeches were really excellent and above the average—especially were those of Mr. Raymond, Mr. Crowther, Dr. Brown and John C. Wetmore, editor of *Town*

*Tattle*, who is the old cycling writer, "Jonah." How the three speakers, Mr. Raymond, Dr. Brown and Jonah, did "rub it into" the writer, Mr. Raymond making a special effort when he said that he was glad to see the representative of a Chicago paper present, although for the past few weeks he had been spared the infliction of reading what he (the representative) had said about him, whereupon Mr. Raymond was asked to read the back-numbers. He promised to do so. Dr. Brown referred to a tour on the ordinary nine years ago; the editor of *Tattle* tattled about the press and pressing business.

Crowther, when speaking of the amateurs, used large dictionary words, and although he made a mighty effort he failed to score. Like an attorney who knows the hopelessness of his case, he fought with a desperation worthy of a better cause.

Host Saltonstall, who acted as toastmaster, was always ready with a suitable introduction to the several speeches. The toasts being replied to were: "L. A. W.," G. Carleton Brown; Digestive Organs," Howard E. Raymond; "The Press," C. C. McBride; "The Amateur," H. E. Crowther; "Our Racing Men," Sydney B. Bowman; "Sporting and Social Press," John C. Wetmore; "Old-Time Professionals," W. J. Morgan; "Our Would-be Racers," F. J. Pope; "Our Slow Riders," A. T. Pendleton; "The Ladies," George W. Morrison.

Mr. Saltonstall was a Chicago boy and was "brought up" in the city by the lake.

## Two Deaths from Centuria at Buffalo.

Both the Ramblers B. C. and the Comrade C. C. are compelled to regret the loss by death of a member. These unfortunate circumstances were the indirect result of "centuria." One of these men had not been well since making a double century, and the other broke down while making a single. Much has been said about over-training, and all of it applies to the injudicious use of the wheel. One may be able to do any quantity of hard riding and, apparently, be never the worse for it, while it is quite the reverse with the next. Now—before the riding season begins—will be a good time to consider the advisability of taxing the system to such a great extent. Next year promises to see any amount of devotees to "centuria" upon the road and the fever promises to run very high. As soon as one sees that he cannot endure the great exertion necessary, it is high time to be very cautious and very gradually get into the proper training. A word to the wise is sufficient.

## C. C. W. Nominees.

The Cook County Wheelmen, ably managed in the past, evidently intends to be in the future from the enthusiasm shown at the caucus held last Thursday evening. The regular ticket is as follows: President, O. R. Barnett; vice-president; L. R. Crawford, secretary; R. R. Craigie; financial secretary, F. C. Stubbs; treasurer, J. E. Crump; directors, P. D. Feen, H. B. Hart; captain, William Blair. The following members will run independently: President, E. G. Morrow, C. E. Graham; vice-president, F. B. Hart; secretary, E. H. St. Clair; captain, F. B. Hart, H. E. Skinner, P. H. Greene; financial secretary, H. A. Hoyt, C. H. Browne; director, C. H. Morrow.

## The Philadelphia Show.

As will be noticed in another portion of the REFEREE, a diagram of the show is shown—or at least, the greater part—with the numbers and names of stalls. The management has made application to the trunk lines for a reduced rate of

one fare for the round trip during the show, but the probability is that a rate of one and one-third is the best that can be secured. About as contemptible a thing as ever appeared in the cycling press was the attack of the Philadelphia correspondent of one of the cycling papers on Thomas Hare, chairman of the committee of the A. C. C. show. It was a personal attack throughout as was evinced by the misstatements regarding Mr. Hare's club connections and was undoubtedly actuated solely by a desire to get even by the man who penned the article, the committee having in former years employed him in various capacities but this season decided that it could do without his services.

## Julius Andrae Cycle Company.

Among the first in America to recognize the correct style in cycles was Julius Andrae, the pioneer cycle dealer of Milwaukee, whose works are located at 186 Second street, with office and salesroom at 225 West Water street. In 1892 Mr. Andrae began to manufacture with the experience of years. His line will consist of the Andrae light roadster, thirty-eight pounds; road racer, thirty pounds, and path racer, twenty-five pounds, finished in colors if desired. The racer will have nickel plated rims, long head, long wheel base, dust proof pedals and tangent spokes.

The Andrae company is well known in the commercial world, having been established for over thirty-two years in Milwaukee. Julius Andrae is still active in the business, looking after the mechanical part of the shops, assisted by his son Terry. The sales department is in charge of Henry P. Andrae, who is manager of the entire business, and J. C. Schmidt-bauer. The concern is represented on the road by Harry J. Warner, who has an extended acquaintance throughout the northwest, a live, hustling traveler.

## Kalamazoo Cycle Company.

The mail carrier attachment, manufactured by the Kalamazoo Cycle Company, consists of a clamp to attach to the handlebar and head of the bicycle, two holes nearly vertical in the clamp to receive the ends of the rod which is bent up to make the frame. From the clamp on the bicycle, each side of the frame is inclined forward and upward and the rod is doubled over at the highest point to form horns, which are adapted to receive the rings on the regular U. S. mail bag.

From this point the rod is dropped downward and inclined forward to form a U-shaped part for the side of the mail bag while it hangs from the horns above.

The postman can hang the bag on the frame, where it will ride and carry the contents in perfect safety, as the frame is elastic, being made of spring steel. The frame is also adjustable up and down, and made to fit the bicycle.

## Central Cycle Manufacturing Company.

The specifications of the Central are here given: Driving wheel, 28 inches; steering wheel, 30 inches; 40 tangent spokes in the rear, and 36 in the front; finest quality of steel wire, number 13 gauge; nicked to intersection, balance enameled; rims of cold rolled steel; Morgan & Wright tires; balls to all parts; frame of weldless imported tubing and drop forgings; drop handlebar of cold drawn steel tubing, 7-8 of an inch, with cork handles; crank shaft, cranks, pedal pins, pedal ends, sprockets and all other parts of the best drop forgings obtainable; plunger brake to front wheel; chain, 3-8 inch, solid steel center; beautifully enameled in black, and bright parts plated on copper; scorcher saddle of most approved pattern; weight stripped, 35 pounds.

## A PAGE FOR THE MELANCHOLY.

Subscriber: No, we don't think any foot ball games will be played on bicycles this year.—Ed.

O, beginners on the cycle,  
Perseverance is the best;  
You just press upon the pedals,  
And the bike will do the rest.

O, you who will get in the way  
And cluster on the racing track;  
Please take a warning, or some day  
A bike will scamper up your back.

Yowler: "I made a fifty-mile run Sunday."  
Growler: "On the eight or the ten hour a day system?"

Dear Max Editor  
My nephew has got  
a besicble that has one  
of them new faugled tires  
called the pneumatic  
Sulowmit - morkumat,  
penuma - gneumat,  
well since I come to think  
about it, I guess he has  
either. No more at present.  
Yours truly  
Johannes

Doodleigh: "Miss Mawy, it is such wough  
widing on this woad that I can habdly keep on  
the saddle, don't you know."

Miss Mary: "Well, I always thought that you  
ought to ride in a basket; you could stay in that  
better."

Mr. De Short: "Did you ride in the last cen-  
tury, Miss Von Snapp?"  
Miss Von Snapp: "In the last century, Mr. De  
Short? I'd have you to know that I only began  
to ride a wheel in the latter part of this century.  
Anyway, your hat is there on the hook."

Now 'round the grate the wheelmen throng;  
Last season's deeds come not amiss,  
And many a spin about so long —  
Is stretched out to the length of this —

If the wheel is made much lighter,  
And more power gets to revealing,  
Men will soon be climbing trees and  
Spinning 'round about the ceiling.

No lazy man will ride a bike,  
The fact is daily proven;  
Once on it, you can bet he's got  
To keep his muscles movin'.

"Well, Uncle Hayrick, has your boy broken the  
record on his wheel yet?"

"It wasn't his record; the doctor said it was his  
collar bone."

"My bicycle is mounted with a great deal of  
silver."

"Hum! Mine is mounted with a great deal of  
difficulty."

"That wheelman, there, is exceedingly well  
heeled."

"I notice that he is, and judging from their  
longitude I should say that he is well toed."

The poet grasped the handle bars,  
He saw the heavens with orbs aglow;

He struck a stone! He saw more stars  
Than Yerkes' telescope will show.

"So you've given up the wheel?"  
"Yes, I couldn't make it. When I want any  
locomotion exercise for my health I'll just go  
down town and ride up and down on an elevator."

"When a man has mastered the wheel he must  
feel pretty well set up."  
"Yes, it is the most setupping of all upsetting  
things."

Hibbard, Spencer, Bartlett & Co.'s Line.

We are in receipt of advance sheets of  
catalogue showing Hibbard, Spencer,  
Bartlett & Co.'s line for '93. This vast  
concern is, as usual, one of the first on  
the market, and this year, with an un-  
usually fine line of machines. This  
branch of their business has grown from  
a small beginning to one of immense  
proportions, the house having recently  
contracted for the entire output of the  
St. Nicholas Manufacturing Company  
for all the western country and a good  
share of the east as well. The wheels  
now being turned out are, from the 24-  
inch boys' diamond frame to the best  
gentlemen's wheel, all built on the latest  
and most approved lines, long wheel  
base, long steering head, etc., and all  
are fitted with either pneumatic or  
cushion tires, so that the small boy who  
can ride nothing larger than the 24-inch  
can enjoy all the latest improvements,  
including the pneumatic tire. The Var-  
sity and Vassar, for beauty of outline  
and finish, are far ahead of anything  
previously presented by the factory.  
Their line of machines will be fitted with  
Morgan & Wright or New York Belting  
and Packing Company's self-healing  
tires, choice of which is left entirely to  
the trade.

The Varsity has 28-inch wheels, dia-

mond frame, long head, round cranks.

The Vassar is similarly constructed

with the exception, of course, of the low  
dropped frame

The Courier has diamond frame, long

wheel base and ball bearings all around.

These three wheels are shown in the  
accompanying illustrations.

George F. Taylor has written a letter  
to Messrs. J. & H. Brookes, in which he  
says: "The Brookes light roadster,  
which I had from you last summer, I  
have thoroughly tested and am delighted  
with its running qualities. The tires  
fitted to this wheel I consider a perfect  
success."

THE HANDSOMEST CYCLE STORE.  
The Coventry Machinists' Company's  
Chicago Depot.

It gives us pleasure to present to our readers, in this special number, a handsome half-tone illustration showing the front of what is universally acknowledged to be by far the handsomest and most complete cycle establishment in America. Space will not allow our going into details, but the illustration will show more than could well be told in type, and the main thing to impress upon the reader is that the whole establishment is fully in keeping with this front.

The Coventry Machinists' Company have been promising all this past summer that as soon as trade slackened up, so as to give them the opportunity, they

designs, from hard woods and fancy glass works.

In the rear of the salesroom is a large stock and packing room, and at the extreme rear of the store is a perfect repair shop, containing every modern device required in that line of work.

The building is lighted throughout with electricity and heated with steam, and equipped with an elaborate system of electric call bells, speaking tubes, etc., and is kept as neat as a pin from front to rear; in fact, one is struck particularly with the fact that everything seems to be kept upon the very highest and most perfect plane.

We strongly urge our readers from both the city and country to embrace the very first opportunity to visit this

*The Sterling's Specifications.*

No wheel recently put on the market has taken better than the Sterling, a splendidly designed, beautifully finished and thoroughly made machine. The Spe-

cial has some new ideas embodied in its construction. The weight is twenty-seven pounds, wheel base forty-three and a half inches, and head ten and three-quarter inches. For the wheels, which are 28-inch front and rear, a special form of hollow rim will be used, made by Warwick. The spokes are specially drawn piano wire and will stand a tensile strain of 950 pounds. A new process of rolling the thread on the spokes avoids decreasing the diameter of same. The Sterling corrugated hub is a distinct advantage, as it avoids the necessity of either hot or cold bending of the spokes, also supplying all the good points in both the direct and tangent styles.

The supplemental gear on the main sprocket will be a strong point in this machine. The small inner sprocket will

give the rider a gear of sixty inches for road riding. The supplemental sprocket ring, increasing the gear to sixty-seven, can easily be attached by four screws provided for that purpose. Provision has been made for changing the length of the chain by a removable link.

The bearings, pedals and cranks are all of the very highest grade, the latter being the round form and toughened by a special treatment. The pedal is absolutely dust proof, the outer end being

inum tips, causing a noticeable absence of that brassy appearance usually observed on the grips of any machine a week old.

*Mr. Sturmeys' Promised Article.*

The trade article promised by Henry Sturmeys, editor of the *Cyclist*, for this issue, has not come to hand up to the time of going to press.

*A Thoroughly Dust-Proof Pedal.*

The cut shown herewith represents a pedal that is thoroughly dust proof. At any rate it will hold gasoline without losing a drop and yet works to perfection. No nuts are exposed, the adjusting

cone on the outer end of the pedal being under a dust cap, which screws into the plate. It is not easy to describe the workings of the bearings; they should be seen. Up to this time it is the nearest to a perfect dust-proof pedal of any we have seen. It is light, thoroughly made and handsomely finished. The Brandenburg Manufacturing Company, Portland block, Chicago, makes the pedal.

The cover of this issue was printed by the Corbett & Skidmore Company, Plymouth place, Chicago. The drawing and color work is the production of Henry Mayer, as are many of the other illustrations. The Regan Printing House is responsible for the presswork, while all the engravings were made by the Columbian Engraving Company of the Caxton Building. The Chicago Paper Company furnished the stock.

A. W. Moore, the western representative of William. Read & Sons, manufacturers of the New Mail, reports a lively demand for his wheels and the appointment of several good agencies. He is also receiving considerable correspon-

would make such alterations in their building as should make it a model establishment. In fulfilling this promise they have been overrun with mechanics and artisans of nearly every character for upwards of nearly two months. The finished work, however, is ample compensation for the expense they have incurred and inconvenience they have suffered.

Walking down Wabash avenue one's eye is sure to light upon a familiar sight in the Swift trade mark, in magnificent gold letters, upon one of the very largest plate glass windows in Chicago, set in a modern iron front of lavish and artistic design. The entrance is at the side, through a massive oak door. Beside the door, and at one side of the window, are immense French plate mirrors, while in the center is a supporting column covered with mirrors. The ceiling is paneled in oak, and the floor of the window finished in a beautiful design of wood mosaic, on which repose samples of the finest pattern Swift wheels, resting upon Turkish and Smyrna rugs, potted ferns being interspersed between the machines and the window backed up by a massive antique bronze rail.

The salesroom proper extends back sixty-five feet. Along one side is a platform, covered with a handsome carpet, on which are shown the finer patterns of Swift wheels, the celebrated Holbein model being conspicuous among them, also one of their new and wonderfully light 21-pound racers. On the opposite side is shown a very full line of other pattern Swifts, while in the center of the floor a couple of geared ordinaries attract much attention. At the rear is a handsome plate glass case containing sundries, which adjoins the offices of the company, the latter being spacious and very handsomely constructed in latest

establishment.

The equipment of a salesroom and depot of this size and style, together with the building of a large and in every way ideal factory at Richmond, Ind., from which to produce their goods for the American trade, indicates clearly that the Coventry Machinists' Company is laying the wires to place themselves in as

THE TELEGRAM CYCLING CLUB.

high a position in American trade as they have for years occupied in England and continental Europe.—Adv.

covered by a screw cap easily removed, when necessary, for adjustment of balls. The cork handles are fitted with alum-

dence in reference to Belsize agencies, He is the sole United States representative for the English wheel.

## THE PHILADELPHIA SHOW.

Plan of the Hall, Showing the Positions of the Principal Exhibitors.

The following is a complete list of exhibitors, as furnished by Secretary Baker. The secretary declined to furnish the numbers of the stands allotted, but we have secured, by telegraph, the particulars supplied below and in the diagram. Those whose numbers are not furnished, failed to reply to our requests for information, up to 10 a. m. on Thursday, 22nd.

Ames & Frost Company, Chicago, stand 54.  
 American Ormonde Company, New York, stand 63-65.  
 Acme Bicycle Carriage Company, Newark.  
 Ariel Cycle Company, Goshen, Ind., stand 79.  
 Anglo-American Iron & Metal Company, New York, stand 87.  
 Atlantic Refining Company, Philadelphia.  
 American Dunlop Tire Company, New York and Chicago.  
 E. Burris, New York, stand 85.  
 Bradley Chainless Bicycle Company, Albany, stand 113.  
 Bidwell, George R., Cycle Company, New York, stands 74, 75, 76, 77.  
 Bretz & Curtis Manufacturing Company, Philadelphia, stand 24.  
 Bailey, John T., & Co., Philadelphia, stands 19-20.  
 Buffalo Wheel Company, Buffalo.  
 Buffalo Tricycle Company, Buffalo, stand 26.  
 Bicycling World, Boston, stand 94.  
 Coleman, R. L., & Co., New York, stands 11, 12, 13, 14.  
 Coventry Machinists' Company, Boston.  
 Codman & Shurtleff, New York.  
 Common Sense Bicycle Manufacturing Company, Philadelphia, stand 9.  
 Crawford Manufacturing Company, Hagerstown, Md., stand 38.  
 Clemmens, F., Philadelphia.  
 Cushman & Dennison, New York.  
 Cyclist, Hartford.  
 Derby Cycle Company, Chicago, stand 112.  
 Dalsen, C. W., Cycle Company, Philadelphia.  
 Elliott Hickory Cycle Company, Newton, Mass., stands 93, 94, 95.  
 Eagle Cycle Company, Torrington, Conn., stand 49.  
 Excelsior Chemical Company, Sandusky, O.  
 Gormully & Jeffery, Chicago, stands 55, 57, 59.  
 Gendron Iron Wheel Company, New York, stand 67.  
 Grant Anti-Friction Ball Company, Fitchburg, Mass.

Hulbert Brothers & Co, New York, stand 1.  
 Hartford Cycle Company, Hartford, stand 42.  
 Hart Cycle Company, Philadelphia, stand 41.  
 Hill Cycle Company, Chicago, stand 84.  
 Hart, Wm. H. Jr., Philadelphia, stand 51.  
 Hunt, J. A., & Co., Westboro, Mass., stand 98.  
 Indiana Bicycle Company, Indianapolis.  
 Kalamazoo Cycle Company, Kalamazoo, Mich., stand 109.  
 Kirkwood, Miller & Co., Peoria, Ill., stand 81.  
 Keating Wheel Company, Holyoke, Mass., stand 124.  
 Lovell, J. P., Arms Company, Boston, stand 47.  
 Levy, S. D., Philadelphia.  
 Lozier, H. A., & Co., Cleveland, O., stands 56, 58.  
 McKee & Harrington, New York, stand 50.  
 Metropolitan Cycle Company, Reading, Pa., stand 91.  
 Monarch Cycle Company, Chicago, stand 53.  
 New York Cycle Company, New York, stand 78.  
 Norman Wheel Company, Philadelphia.  
 Niagara Machine Company, Buffalo, stand 110.  
 New York Belting and Packing Company, New York, stand 34.  
 McIntosh, -Huntington Comp'y, Cleveland, stands 99, 100, 101.  
 Michelin Pneumatic Tire Company, stand 85.  
 Overman Wheel Company, Boston.  
 Outing Company, New York, stand 107-1-2.  
 Pope Manufacturing Company, Boston, stands 43, 44, 45, 46.  
 Peerless Cycle Company, Cleveland, O.  
 Parkhurst & Wilkinson, Chicago, stand 73.  
 Pennsylvania Division L. A. W., Philadelphia, stand 107.  
 Philadelphia Drop Forge Company, Philadelphia, stand 81.  
 Premier Cycle Company, stand 83.

Royal Cycle Company, Marshall, Mich., stand 60.  
 Rochester Cycle Company, Rochester, stand 26.  
 Rouse, Hazard & Co., Peoria, Ill., stands 29, 30, 32.  
 Read, Wm., & Sons, Boston, stand 97.  
 Rich, J. B., Cycle Company, Philadelphia, stand 8.  
 Remington Arms Company, New York, stands 35, 36.  
 Rimington Brothers Company, New York.  
 Red Star Manufacturing Company, Philadelphia, stand 109.  
 Sercombe-Bolte Manufacturing Company, Milwaukee, stands 69-71.  
 Spalding & Bros., Philadelphia, stands 16, 17, 18.

 Wheel, The, New York, stand 2.  
 Warman & Hazelwood, Chicago, stand 123.  
 Yost Manufacturing Company, Toledo, stand 5.

The Vincent Cycle Company of Buffalo has recently fitted up its factory with special machinery and a complete nickel-plating outfit, the latter of which was furnished by the Zucker & Levett Chemical Company of New York city.

## Loyd, Read &amp; Co.—The Overstone.

The new Overstone races and semi-racer, made by Loyd, Read & Co., of Coventry, are two handsome wheels, weighing twenty and twenty-five pounds, respectively, with Dunlop tires. They

A. E. FLAVELL.

have 28-inch wheels, tangent spokes, 15-8 and 13-4-inch tires, respectively, and 64 or 68-inch gear. The semi-racer, when fitted with guards and brake, weighs twenty-eight pounds. The cut

herewith represents the semi-racer. Arthur E. Flavell, formerly maker of the Reform, but now representing Loyd, Read & Co., will be in Chicago this week, having sailed on the Teutonic on the 14th. He will place agencies for the Overstone in this country. Letters addressed to him care the REFEREE will reach him.

## THE IDEAL BICYCLE STAND.

Fills a long-felt want for a stand that will not allow the wheels to fall, hold any size wheel regardless of kind of tire. Guaranteed not to injure finish, and wheels may be released in a second.

List \$1.25. Liberal discount to the trade.

**HAY & WILLITS**  
70 North Penn St.,  
Indianapolis, - Indiana.

### Chicago Trade Jottings.

A. J. Nicolet enters the employ of the Grand Rapids Cycle Company this week, for which he will travel.

L. A. Howell left Chicago last week for the Stokes company selling Sterlings. He will visit the larger towns between here and Philadelphia.

C. H. Weld, assistant manager of the Royal Cycle Works, of Marshall, Mich., is again in Chicago, having placed no local agency as yet.

Proctor E. Seas, of the Yost Manufacturing Company, of Toledo, was in Chicago last week. An agency may be established in this city.

Horton, Gilmore, McWilliams & Co. will this year handle as a high grade line the Coventry Cross cycles and the Featherstone complete line in medium grades.

C. G. Field, now in the west for the Sterling Cycle Works, is selling numbers of the Sterling '93 model and quite a number of the double frame wheel, the Sterling of '92.

M. A. Meader, of the Ariel Cycle Company, Goshen, Ind., left Chicago last Wednesday morning for a two months' trip throughout the west selling Ariels. Mr. Meader will go to Denver, thence south into New Mexico and west through Utah to California, stopping at Los Angeles, Sacramento and San Francisco, thence to Portland, Ore., returning via Seattle, Tacoma and the northern route.

### Sercombe-Bolte Manufacturing Company.

The Sercombe-Bolte Manufacturing Company, which began operations in a small way, has grown and enlarged to a wonderful extent. The plant is at 355 and 357 East Water street, where the company occupies the entire five stories and basement. This company is one of the first to complete its line of samples for 1893. The company places six styles of Telegrams upon the market, none weighing over thirty-five pounds. Should the prosperity of this company continue, Milwaukee will occupy a conspicuous place as a bicycle manufacturing center.

### William Read & Sons.

This house will make an exhibit at the Philadelphia show. Its stand is No. 99. Mr. Atwell writes: "We shall exhibit nothing but wheels. Our '93 New Mail has a 30-inch front wheel and 28-inch rear 13-4-inch pneumatic tires, single butt end tangent spokes, tied and nickled, new patent lap rim, low handlebars, cork handles, 3-8 chain (1-inch pitch), 6 1-2 inch throw, round cranks, dust-proof pedals, either rat trap or rubber, with tools complete, best Credenda tubing and all drop forgings; weight stripped, 35 pounds; price, \$125.

FOR  
**Tangent and Direct  
Spokes.**  
For Sale by All Dealers or Sent  
Postpaid for 75c.  
**AVERY & JENNESS,**  
5756 Madison-av., CHICAGO.

**WANTED—BY A THOROUGHLY EXPERIENCED and competent traveling man, position with reliable house. References A 1. Answer quickly. Address, Salesman, REFEREE Office.**

### Willing to Wait.

Mr. Sercombe writes the *Tribune* that he does not care to withdraw his \$500 deposit in the Sanger-Zimmerman match. He admits that Zimmerman cannot get into shape, everything considered, inside of the next six months, but is perfectly willing to wait. Inasmuch as Mr. Sercombe is willing to wait until Zimmerman is in shape to race, we take it that he is quite in earnest about the challenge. As long as he is willing to wait we see no other course for Jimmy to pursue than to ride against Sanger.

### The Ames & Frost Company.

Imperials, the product of the above concern, will be exhibited at stand 54 in the Philadelphia cycle show. Five styles will be shown—model A, 40 pounds; scorcher, 35 pounds; ladies', 38 pounds; road racer, 28 pounds, and track racer, 25 pounds. All these machines will be fitted with numerous improvements—new handlebar and head adjusting clamp, something entirely new; Imperial patent dust cap to bearings; round cranks, dust proof pedals, and Imperial pneumatic tires.

### The Wisconsin Division.

Messrs. Simonds, Morawetz, Jones, Baldwin, Powers, Moore, Pearson, Warner, Zeidt, Liebkemann, Kraus, Andrae and Warner have been selected as delegates to the national assembly from the Wisconsin division. The division now has 583 members, an increase of 20 per cent over last year. Ripon was selected as the place for holding the annual meet July 4.

### The Pullman Road Race.

President Randall and Secretary Erwin of the Associated Cycling Clubs, R. D. Garden and Agent Appleyard of the Pullman Company held a conference Tuesday relative to the Pullman road race for 1893. It was practically decided to hold the race over the old course, finishing at Pullman as heretofore. Mr. Appleyard will do all he can to aid in making the event a success, but the Hotel Florence will not be open to the wheelmen, except the dining room. Arrangements will be made to use the rooms on Athletic Island for dressing quarters.

## D. SNITJER,

1118 Olive St., St. Louis, Mo.,

Desires to thank his many friends and customers for past favors, and through this medium extend to them the compliments of the season, adding, in conclusion, that he expects to be in the field early in 1893, with a full line of Bicycles, manufactured by such well-known makers as the Warwick Cycle Manufacturing Co., the Central Cycle Manufacturing Co., the Western Wheel Works, the Indiana Bicycle Co., and others, embracing a large variety of all sizes for men, women and children.

His Fifth Annual Catalogue will be out in January, and will be mailed free to all who send their names to

"Au Fait"  
Trouser Clips

Patent  
Applied For.

Will more firmly hold the trousers, not nearly so conspicuous, do not take up so much space in the pocket, easily reshaped if bent, and are superior to all others on the market. Send for sample pair. Living discount to the trade.

"Au Fait"  
Trouser Clips

Patent  
Applied For.

MANUFACTURED BY.

Wm. T. Robertson, - 739-41 9th Street, Washington, D. C.

## Holland Automatic Safety Stand.

(PATENT APPLIED FOR.)

Easily and Speedily Attached to any Central Tube, Diamond or Drop Frame Safety. NEVER IN THE WAY OF THE RIDER. Will hold machine upright on any level place. Machine cannot fall either way. Both arms work in unison, up or down, when operated from either side of machine. It cannot rattle. Adds to the appearance of the machine and weighs but a trifle. Full Nickel-plated with Rubber Tips—cannot mar the finish. PRICE, \$3.00.

LINCOLN HOLLAND, Inventor and Manufr., S. Framingham, Mass

## WORK FOR US

a few days, and you will be startled at the unexpected success that will reward your efforts. We can be found on the face of this earth. \$45.00 profit on \$75.00 worth of business is being easily and honorably made by and paid to hundreds of men, women, boys, and girls in our employ. You can make money faster at work for us than you have any idea of. The business is so easy to learn, and instructions so simple and plain, that all succeed from the start. Those who take hold of the business reap the advantage that arises from the sound reputation of one of the oldest, most successful, and largest publishing houses in America. Secure for yourself the profits that the business so readily and handsomely yields. All beginners succeed grandly, and more than realize their greatest expectations. Those who try it find exactly as we tell them. There is plenty of room for a few more workers, and we urge them to begin at once. If you are already employed, but have a few spare moments, and wish to use them to advantage, then write us at once (for this is your grand opportunity), and receive full particulars by return mail. Address, TRUE & CO., Box No. 400, Augusta, Me.

## USE EAST INDIA STICK GRAPHOLINE

FOR BICYCLE CHAINS.

The only chain lubricant that gathers no dust. It is easily applied, being manufactured in sticks three inches long. It protects the chain from rust, dust, mud and wear. Price 25 cents, by mail.

**PRINCE WELLS**  
KENTUCKY BICYCLE AGENCY,  
626 Fourth Ave. LOUISVILLE, KY.

## LEARN SOMETHING ABOUT OILERS.

An oil can should not only be clean and tight but should also be able to regulate the supply of oil. No oil should overflow causing dirt to collect on the wheel and soiling the hands and clothes. An oil can seems an unimportant article, but a poor oiler will cause a large amount of trouble. Look into the matter and buy the best. It will repay you. Price, 25c. each.

### "PERFECT" POCKET OIL HOLDER

Best and most convenient device for carrying an oil can on a bicycle. Thoroughly adjustable and easily attached to any part of the machine; no rattling; handsomely nickel-plated. Price, 25c. each.

CUSHMAN & DENISON  
172 9th Ave., - New York.

HALF  
SIZE.

CUSHMAN & DENISON,  
172 Ninth Ave., N. Y.

### "PERFECT" Pneumatic Pump Holder

Similar to oiler holder, but slightly larger. Pump is always convenient and vexatious delays avoided; handsomely nickel-plated. For sale everywhere. Price, 25c. each.

CUSHMAN & DENISON  
172 9th Ave., - New York.

# COVENTRY CROSS CYCLES.

B. 90.

Responsible agents wanted to sell the famous COVENTRY CROSS CYCLES.  
Liberal Terms. 1893 patterns now ready; free on application.

The following lists are intended to contain the names and addresses of every person, firm and company engaged in the various branches of the cycle trade. No doubt some have been overlooked, but this is the result rather of their own negligence than ours. We have used every available means to secure full and accurate reports. On the completion of the lists proof slips were sent to each house mentioned, with a request that they be approved or corrected and returned. Nearly all have replied, so that we feel assured that the information furnished is about as correct as it is possible to make it. Our thanks are extended to friends who have favored us with information in connection with this undertaking, and to those who, by prompt and careful replies to our questions, have facilitated the work.

# THE JAMES CYCLE CO.

113 ADAMS ST. CHICAGO.

## A Big Offer:

There are machines in the market, the makers of which claim to have revolutionized everything in connection with cycling—except amateurism!! That's their peculiarity!!

We have never yet subsidised Amateur Riders—being a contravention of the rules and regulations of the National Cyclists' Union, and a breach of Amateur Law—we do not intend to depart from this principle, but will present

### A Prize Value \$500

to the first Amateur rider who succeeds in lowering the One Mile Amateur Record on one of our "CHAMPION" RACERS. We will also give to the first Professional who succeeds in lowering the World's Record at One Mile on our Machines

### \$500 Hard Cash.

We are exhibiting at the National Cycle Show, Crystal Palace, January 20 to 28, 1893.

New Buckingham & Adams Cycle Co., Ltd.  
Coventry Works, Birmingham, England.

### SOUTH ROAD, MODEL D.

Track Racer, 22 Lbs.

### SOUTH ROAD, MODEL D.

Road Racer, 28 Lbs.

Full Roadster, same Model, 32 Lbs.

## B. & A. CHAMPION RACER.

1893 Model. TRACK RACER, : 22 POUNDS.  
ROAD RACER, : 28 POUNDS.  
FULL ROADSTER, : 32 POUNDS.

On Nov. 12th, E. R. Milmine won the 10 mile road race at Lincoln, Neb., on a B. & A. Champion Road Racer. It was placed at his disposal by Mr. Plummer and he selected it, out of a score offered, as the fastest.

## Specifications.

These machines are constructed on scientific lines and distinguished for Perfect Finish, Lightness and Speed. We guarantee that there is not a single casting throughout. Tangent Spokes, 28-inch Wheels, Balls to all parts, Southard Cranks, Adjustable Seat Post and Handle Bar.

## Full Guarantee.

E. W. Ballard has been riding a South Road Track Racer and won quite a number of races this season.

### EXTRACTS FROM PRESS NOTICES.

A very nice collection of South Road cycles, including the lightest 21-2 inch clincher-tyred safety in the show, which weighs 30-lb. only. \* \* \* All the stampings are struck out of sheet steel for these machines, and the finish put upon them is of the best.—Bicycling News.

As the Cycling man approached this stand his glance fell on one of the lightest and most racy little safeties in the palace.

The South Road cycles form a good exhibit. \* \* \* The tit-bit of the stand is a safety with 21-2 inch clincher tyres, yet only weighing 30-lbs.—Cycle Record.

The South Road is a splendid little machine, and impresses us very favourably.—Scottish Cyclist.

The best of the South Road machines is the extended diamond, built high for tall riders and on a smaller scale to suit short men.—Irish Cyclist.

W. F. French & Sons make a good exhibit \* \* \* and in roadsters, as in racers, the machines are worthy of notice, both as regards design and construction.—The Ironmonger.

## A FEW GOOD AGENTS WANTED.

Sole Agents for U. S. A.

# THE JAMES CYCLE CO.

113 ADAMS ST..CHICAGO.

## THE JAMES FOR 1893.

The English "Cyclist," commenting on the exhibits at the the Stanley show, says that Harry James makes a special feature of lightness in construction and neatness in detail. Half a dozen racing machines are suspended on spring balances, scaling from 15 3-4 lbs. to 17 lbs., showing that Mr. James cannot only build one machine, but several to come out at practically the same weight.

The cuts for the "James" have not arrived. There will be dust proof bearings, tool steel cones, etc., and the weights as under. Full guarantee.

TRACK RACER, 17 TO 21 POUNDS.

ROAD RACER, 25 TO 27 POUNDS.

FULL ROADSTER, - - 30 POUNDS.

LADY'S SAFETY, - - - 30 POUNDS.

A SHIPMENT OF 1893 WHEELS IS ON THE WAY.

# THE JAMES CYCLE CO.

## 113 ADAMS ST. CHICAGO.

### A POSITIVE SUCCESS AGAINST THE GREATEST ODDS.

**Eight Months Ago** almost everybody said that a road wheel under 28 pounds would not stand our American roads.

**Six Months Ago** a few were converted.

**Five Months Ago** you could find a very fair sprinkling of believers.

**Four Months Ago** every other rider you met would admit that a "JAMES" had passed him on the road standing up to the work without a squeak or rattle anywhere.

**Three Months Ago** every rider you met who was propelling more than thirty pounds of machinery over the roads was weary and ill at ease, when a 27½ lb. "JAMES" pulled up alongside of him.

**Two Months Ago** the manufacturers began to have a seasick sensation when they realized that in 1893 they would be unable to sell their heavy weights at any price, as the long suffering riders have had enough of them.

**One Month Ago** these manufacturers were denouncing feather weight wheels. **Why? Simply this.** FIRST: To build a road wheel weighing from 25 to 28 lbs requires material selected from the grade of tubing which can not be purchased on the open market, because the factory contracts its output more than a year in advance of its delivery and will only supply its established trade. **The Special Tubing** required for the "JAMES" was ordered the latter part of 1891 for the 1893 wheels. SECOND: Every part, Hubs, Rims, Spokes, Cranks, Handle Bars, Pedals, Forks, must be so nicely adjusted to each other that the wheel will be properly balanced, and the lighter the weight of each part the better the quality required. THIRD: **Workmanship**—An unskilled hand upon light work is impossible. FOURTH: The most careful inspection. FIFTH: A reputation already acquired by the machine on the road.

To sum up, Harry James is his own foreman and gives his entire attention to the details. He has been doing this kind of work for **twenty-four years** and has always been in advance of the trade in his results. His reputation has been built entirely upon his ability to build out of steel and rubber a **lighter road wheel than any other manufacturer**, and to-day Harry James stands without a rival in light weights and quality combined. For 1893 he promises a better wheel than he has ever yet built. Even the ladies, whose wants are usually ignored by the manufacturers, find that Mr. James is building a 30 lb. all on wheel for their use and guarantees them fully, and the ladies are his friends.

### THE FOLLOWING ARE A FEW OF THE RACES WON ON THE "JAMES:"

| DATE.   | PLACE.             | RACE.                    | PRIZE. | RIDERS.        | DATE.   | PLACE.             | RACE.                   | PRIZE. | RIDERS.         |

THOROUGHbred PHOENIX.

THE COMPLIMENTS OF THE SEASON  
TO YOU!

**Phoenix**

*Unbeaten—Highest Grade.  
THE SUCCESS OF '92.*

As a result of good, hard-headed experience we know how to build a wheel which is unexcelled in material, workmanship, finish or design.

We catalogue seven machines; three entirely new models for 1893. Fitted with G. & J. or Palmer tires.

STOVER BICYCLE MANUFACTURING CO.,  
Freeport, Ill.

LADIES' PHOENIX.

The Telegram Cycling Club.

The Telegram C. C. is the latest addition to the cycling club directory of Milwaukee, and bids fair to occupy a leading position. The regular election of officers will take place on or about Jan. 1. A membership of seventy-five is already guaranteed and it is thought by that time a hundred or more will have joined the organization. In a city the size of Milwaukee there is always room for one more, and especially an organization that has for its object the developing and proper training of speedy riders. While in the past all the clubs aided their racing men as far as possible, the lack of available funds for this purpose has retarded the advancement of a number of promising riders. The Telegram Cycling Club, in the near future, will have a club house of its own, and in the spring will have a half-mile track. This is guaranteed, inasmuch as a number of prominent business men of ample means who are interested in the sport, have pledged themselves to see that the club enjoys every facility for racing and social entertainment enjoyed by any other club in the country. The club's racing team will be headed by Sanger, Nichol, Wegner and leading racing men of the city. During the coming season a team of at least three of its speediest riders will carry the clubs colors to every race meet of importance in the country. It is also the intention of the club to give one of the largest race meets during the coming season ever attempted in the northwest.

JACK ROYAL.

The Clerical Cycle Club was organized Monday night by a dozen Brooklyn clergymen.

# THE FOWLER

IS MADE TO RIDE,

*Not in Certain Localities Only, But Any Place That  
Riders Ride---and Mind You, it is Guaranteed

# E. A. KINSEY & CO., CINCINNATI, OHIO.,

Give special attention to the equipment of Bicycle Factories. There is scarcely a Bicycle concern in the country who has not been supplied with either a part or all of their tools and machinery by them, such as:

Rim - Rolling Machines,  
Rim - Turning Machines,  
Rim - Welding Machines,  
Roll - Treading Machines,  
Spoke - Heading Machines,  
Swaging Machines,  
Automatic Screw Machines,  
Milling Machines,  
Polishing Machines,  
Grinding Machines,  
Wire Straightening Machines,  
Riveting Machines,  
Lathes,  
Planers,  
Shapers,  
Drills, Punchers,  
Hammers, Etc., Etc.

They are also in position to furnish Pneumatic or Cushion Tires, Chains, Spokes, etc.

It will pay you to write them for information, even if not in the need of anything in their line at present.

## ARRANGING THE CIRCUITS.

Chairman Raymond of the racing board has hit upon a good idea regarding next year's international races. Judging from the circular which he has issued there is to be an international circuit next year, and the chairman urges all race meet promoters to send in their dates at as early a date as possible, in order that a schedule may be made up. The rule regarding sanctions was created in order that the conflicting of dates might be avoided, and in this one respect it worked well enough. It did not prevent a meet being held in one place on one day and another several hundred miles away on the next. There were several cases last year where the riders, trainers, officials and members of the press were compelled to travel from place No. 1 to place No. 2—anywhere from a hundred to 200 miles apart—and then the next day to place No. 3, which might have been not over fifty miles from No. 1. The arrangement of dates on the western circuit was poor, and necessitated a great deal of traveling which might have been avoided had the dates been properly arranged.

Mr. Raymond's plan, we judge from the circular, is to have all applications in hand at any early date and then arrange the dates as nearly as possible according to those called for in the applications, but, at all events, so as to prevent needless traveling and confusions.

There seems to be no reason why all the important circuits cannot be arranged under a similar scheme, while the small meets could be sandwiched in in such a manner as would best suit all parties.

## SUBMITTED TO A MAIL VOTE.

Believing that every member of the league should be accorded an opportunity of expressing his opinion on the various questions now agitating the minds of cyclists, the REFEREE has decided to take a mail vote thereon. Particulars will be found in another column and every reader is urged to note carefully the details and mail us his vote. By this means only, we believe, can the real sentiments of the members be obtained. This is an opportunity never before offered and it is very desirable that everyone who takes any interest whatever in the sport, should take advantage of it. Frequently a league member is heard to express an opinion to the effect that the league is a close corporation and its members have

little or no voice in the management of the concern. While the result of this poll will not settle the question at issue it will have a great influence with the delegates to the convention and may be the means of bringing to issue that which the majority desires.

GENERAL ORDWAY'S little book on "Cycle Infantry Drill Regulations contains this rule, No 55, under the heading "Position of the cyclist, mounted":

Head erect and square to the front.  
Chin slightly drawn in.  
Shoulders square to the front.  
Back straight, with body inclined slightly forward.  
Arms straight, but not rigid.  
Legs straight, but stretched by their weight alone.

Feet parallel to the axis of the cycle, the ball of the foot resting lightly on the pedal.

Picture, if you will, a man on a bicycle, with the usual traps carried by a military cyclist, in the position suggested. General Ordway may be a good commanding officer, but he evidently knows little about bicycles and riders' positions. If this rule is intended only for dress parade occasions it is not so bad, but even then it is going to extremes. Experience has taught us that a man can't very well ride with back, arms and legs straight, and if military cyclists practice General Ordway's scheme they would be useless in the case of a forced ride for any great distance.

JUST two members of the Associated Cycling Clubs of Chicago attended the last regularly called meeting. It is seriously contemplated formulating a rule requiring the expulsion of a member who is absent three consecutive meetings, his club to elect another delegate, but we doubt if this would do any good. Just announce a nice spread and see how well the meeting would be attended.

FREDERICK HANS Emil Fischer Baer Myers Krull was lately elected bugler of the Niagara Falls Bicycle Club. With the falls so near, a man carrying such a name should never hesitate to throw the larger portion of it over.

## Buffalo as a Cycling Center.

The fact that the attention of all cycle manufacturers, as well as those interested in all pertaining thereto, is directed towards Buffalo, is pretty strong evidence of the growth of the interest in wheeling. Buffalo stands very near the top of the column as a cycling center, and from the most extraordinary development of the past season, the idea is perfectly correct. There are now between twenty-five and thirty agencies where wheeling accessories of all sorts are on sale, and new concerns are daily being talked about. There are also ten manufactories, whose output is all contracted for and whose work will stand the closest inspection.

The united membership of the eleven clubs and wheeling sections of athletic clubs amounts to but 1,012, but Buffalonians are very sanguine that this will be more than doubled during the coming season. The Associated Cycling Clubs of Buffalo will do much to develop maintain and promote a healthful interest in this fertile field.

## He Was Poetical.

This is the way an enthusiastic rider puts it in testifying to the good qualities of a certain wheel:

To him who in the love of nature holds  
Communion with her visible forms,  
Must own and ride a—

What man, woman or child who has not experienced the benign influence, the exhilarating motion, the fascinating buoyancy, the enchanting scene as one sails (as it were) without effort through the ethereal element, all nature smiling as they glide, has only half lived.

## CURRENT COMMENT.

Has there ever been a sport "since the memory of man endureth" that has counted so many votaries, enlisted so much brain and capital, or supported such a number of magnificent publications, as bicycling? I trow not. This last clause calls to my mind the wonderful growth and development that has attended papers given over to the interests of cycling sport and trade during the last ten years, or a little longer. We old ones mind well the first copy of a bicycle paper that came to our notice, the *American Bicyclist*, edited by Charles E. Pratt, for so many years the attorney for the Pope Manufacturing Company, and a rare good fellow, a thorough gentleman, and brainy withal. I hear that he is ill with that bane of the office man, consumption, and sorry am I to know it, for his head and his hands have done much for the sport. His paper was poor and small, but it was a start and from it has grown such wonderful works of the printers' art as the Christmas REFEREE, probably the finest issue of a purely trade and sport journal ever published.

It is a matter to be proud of—the fact that the two greatest cycle publications are printed in Chicago—paid for by Chicago capital and edited by Chicago brains. It is not so many years ago when western riders were looked down upon as semi-avages by our eastern brethren, and when the idea of a successful cycling paper in Chicago was laughed at, but now the greatest eastern paper scoffs at the notion of a Christmas number, preferring to stand down rather than to compete with the west. The sport and the trade owe much to the efforts of the cycling press, for the old admonition, "Let your light so shine before men that your good works may be known," applies equally well in business as in morals and without the aid of printers' ink the sport would surely languish. Nevertheless the paper owes much also to the trader; for nobly has maker and dealer performed each his share, and right manfully has each "come down" with the ducat, without which the paper could not exist. Now, therefore, I lay down the proposition that the maker and the dealer are necessary to the existence of the cycling press, and that the cycling press is necessary to the maker and dealer. Broadly speaking, neither could live without the other; therefore each should be careful of the interests of the other, and I am sorry to say that some cycling papers have not been altogether too careful of the interests of their patrons in their eagerness to advance themselves. They have enlarged altogether too much upon the wonderful field for gain opened by the bicycle business, and many times when they knew that the market was overstocked, that dealer and maker alike were struggling for life in a sea of financial difficulty, they have serenely published paragraph after paragraph of drivel and nonsense regarding the prosperous condition of the business, thereby inducing outside capital to enter an already over-crowded industry. In another way their influence has caused their staunchest supporters annoyance and loss. Every change in machine, every new scheme for reducing weight, every new device in tire construction has been hailed with delight, and forced upon the makers by them. The last three years have been absolutely disastrous to the maker and with him the dealer had to suffer. The change from drop and spring frame machines to cross and diamond frame was forced upon the maker in less than six months. They had no time to experiment, and those who had made splendid

heavy machines, made mighty poor light ones, though they did their best. From solid to cushion, from cushion to pneumatic tires, all inside of a year. No one knew how to make good cushion or good pneumatic tires. The makers did their best, and furnished the best they could buy, but the public found them bad, and the makers suffered. The press is in a great measure to blame for this, for although the changes in the end are bound to be beneficial, they were made too quickly, were forced, as it were, upon an infant industry prematurely. Even now there is a tendency among some cycle papers to boom the geared ordinary and certain other devices. Don't do it, gentlemen, let us have a chance to perfect the light safety and the wind, rubber and rag combination first.

\* \* \*

It gives me pleasure to get a word of commendation from my friend "Rover." I have seen through his disguise for a long while and have thoroughly enjoyed his articles. I know him to be a worker and a schemer, and that his experience as a commercial tourist has put him in a position to see for himself that which I have seen for myself as a drummer and an office man. Therefore, when he says that I am not as much of a crank as some would believe, I pat myself on my back and remark: "Mal Tail, old boy, come again."

By the way, Mr. Golder in my presence, the other day, gave a translation of my name to an inquirer that amused me mightily. (Be it known that neither translator nor inquirer knew that the name belonged to me.) Said he, in his bland, sleepy way: "La Cote Mal Taile, me boy—why, that is Irish and means don't tread on the tail of me coat." Not bad, nor so far out of the way, either. I wonder where Golder learned Irish.

LA COTE MAL TAILE.

## A La Chicago C. C.

There is a prevailing idea that all love for the g. o. o. by former riders is a matter of the past, but such is not the case. A number of Milwaukee devotees of this effete type of cycling recently had a race to White Fish Bay. The party included a number of old-timers—Henry and Terry Andrae, Frank Morawetz, "Papa" Simonds, John Schmdtbauer, Oscar Binner and a host of others. It was agreed that the rider falling off or dismounting the greatest number of times should provide the dinner for the party. The race proved a regular "humpty-dumpty" affair, each one continually falling over the other. The party arrived at the bay, and as the figuring out of the one who fell off the most seemed almost as intricate as the solving of a Chinese puzzle, the entire party stood a German treat and enjoyed a good dinner.

## Failed to Show Up.

The racing board of the Milwaukee Wheelmen and the public interested in racing have every reason to doubt the veracity of the professional trainer, Tom Eck. At the last meet he promised that Johnson would be present, and again at the meet last week he gave unsolicited assurance that he would surely be here. In the former case the public was sorely disappointed, but at the last meet Chairman Schroeder positively refused to assume the responsibility of Johnson's coming, merely stating that he received a letter from Eck saying they would be here.

Agents who have in the past handled Rovers are requested to write to Harry Nevill, care of the REFEREE office, Chicago.

TO HAVE A MAIL VOTE.

A CHANCE FOR EVERY LEAGUE MEMBER TO EXPRESS HIS OPINION.

Questions to be Discussed on February 20th to be Submitted to a Vote of Ten Thousand Members by The "Referee."

The will of the majority should be law in the affairs of the League of American Wheelmen, as in every institution. The constitution of the league can only be amended at a meeting called for the purpose, of which sixty days' notice has been given, and thirty days' notice of any proposed change must be given in the Bulletin.

Such a convention has been called, to be held in Philadelphia Feb. 20. Notice of proposed amendments must appear in the Bulletin not later than the issue of Jan. 20, and should reach the office of the secretary not later than January 15.

It is presumed that the sentiment of this gathering will be that of the entire league. But will it? In the first place, the section in which the meeting is held has an immense advantage, because its members may attend with little or no expense to themselves, and so carry any motion which they may desire to go into effect. Philadelphia, we believe, will have no particular axe to grind at the coming meeting, and President Burdette is to be congratulated on his choice of location.

But in the second place, the proxy system permits any man to cast twenty-five votes, provided he can obtain the proxies without reference to the wishes of the men he represents. A man may be a member of an unlimited number of league clubs, and may cast the entire club vote of each of them, while the members may still be present and vote in person. There is no check on the proxies, nor can any one tell whether the signatures are genuine, or whether a man has signed one proxy or a dozen.

Thus a few men may control the convention and carry out any design they may have in mind.

It has been contended that the only way to ascertain the real sentiment of the league is by means of a mail vote. Some claim that the officers of the league should be elected in this way instead of, as at present, by the national assembly.

To obtain such a mail vote is not an easy task. The mailing list is not obtained except at an expense of—as we understand—about \$300. The cost of envelopes, circulars, return postal cards, addressing and postage, for the entire membership, would be in the neighborhood of \$800, or \$1,100 in all—more money, probably, than anyone is willing to pay for the experiment. We believe it reasonable to suppose, however, that the vote of 500 to 1,000 members might be taken as the sentiment of the league, provided the vote were taken fairly. We have concluded to try it. We shall forward, at once, to every local consul, a request for a mail vote on those questions liable to be discussed at the coming meeting. These will be followed by 5,000 circulars, to league members, taken indiscriminately from the Bulletin. Each state will receive a number proportionate with its league membership. The reply, in every case, will be prepaid. We reproduce here a copy of the circular. In it we have endeavored to convey to those members who are not entirely familiar with the rules an absolutely impartial understanding of the questions involved:

The questions asked on the postal card

are those found in the accompanying voting blank. This blank all league members who have not received one of the postal cards are invited to fill out and return to this office. Any consul or other officer who desires to make use of them will be furnished with a supply of these blanks without charge. Inasmuch as these may be made use of by factions, however, and may not represent the general feeling, they will not be counted with the postal card vote, but will be kept in a separate table.

The result of the vote in detail will be published from week to week up to the date of the meeting.

Little Notes.

The Ohio division meet, July 4, next, will be held at Sandusky.

Buffalo has 12,000 wheelmen, thirty agents and ten bicycle factories.

The Buffalo Ramblers held their annual election Tuesday last with the following result: President, F. E. Hartmayer; vice-president, Oscar Cosock; corresponding secretary, F. F. Rick; financial secretary, R. F. Kelsey; recording secretary, F. E. Klipfel; treasurer, C. P. Spalding; captain, Edward Young.

VOTING BLANK.

Cut Out this Blank, and, After Filling In Your Replies, Mail to the Referee, Chicago.

No. 1. Shall men whose expenses are paid by makers and clubs be allowed to compete as amateurs? .....

No. 2. Shall amateurs be allowed to compete for such prizes as pianos, teams, lots, etc.? .....

No. 3. If not, shall men whose expenses are so paid and who compete for such prizes be placed in a middle class or be classed as professionals? .....

No. 4. Shall professionals, provided they are otherwise acceptable, be admitted to league membership? .....

No. 5. Shall cash prizes be awarded to any class, and if so, which? .....

Address.....

League No. (if possible).....

A supply of these blanks will be forwarded to any league member on application.

SAM'L. A. MILES, Editor.

R. M. JAFFRAY, Business Manager.

THE LEADING CYCLING JOURNAL.

PUBLISHED WEEKLY BY THE REFEREE PUBLISHING CO.

PRINCIPAL OFFICE, "CAXTON" BUILDING 328-334 Dearborn Street.

Chicago, 189

Dear Sir:

For several seasons a number of important questions have been before L. A. W. members for discussion. Some of them will probably be decided at a convention to be held at Philadelphia on January 20th, 1893. For the purpose of ascertaining the views of the membership at large, we request you to answer the questions on the enclosed postal card and return to us.

Should you feel disposed to express your views at greater length than the postal card will permit, we shall be glad to receive a further communication from you for publication.

Yours truly, REFEREE PUB. CO.

AN EXPLANATION.

For the guidance of those not thoroughly familiar with the questions involved we give the following information concerning them:

No. 1. Shall men whose expenses are paid by makers and clubs be allowed to compete as amateurs?

Heretofore men whose expenses while in training and while attending race meets have been paid by their clubs, have been allowed to compete as amateurs. It is generally supposed, also, that many riders' expenses are paid by manufacturers.

No. 2. Shall amateurs be allowed to compete for such prizes as pianos, teams, lots, etc.?

Amateurs have been allowed to accept the prizes named, as well as laundry bills, shaving bills, loads of ice, flour, hams, soda-water tickets, "merchandise to the value of," etc.

No. 3. If not, shall men whose expenses are so paid and who compete for such prizes be placed in a middle class or be classed as professionals?

It has been suggested that men whose expenses are so paid, and who compete for such prizes, be placed in a separate class, and called "promateurs," while others consider that they should be declared professionals.

No. 4. Shall professionals, provided they are otherwise acceptable, be admitted to league membership?

No. 5. Shall cash prizes be awarded to any class, and if so, which?

Many believe in awarding cash prizes to all; others that articles of jewelry, etc. should be awarded to amateurs and cash to others, all to be under control of the league.

No. 6. Shall the addresses as well as names of applicants for membership be published in the Bulletin?

At present only the names of applicants for membership are published, and no alteration, probably, can be made until the present contract with the Wheelman Co. expires. Some claim that the applicants cannot be identified without their addresses, while others are actuated by personal motives only.

No. 7. Shall the constitution be so changed, as to permit of a change by a mail vote?

The constitution cannot now be changed except at a meeting called for the purpose, and notices of proposed amendments must be published in the Bulletin 30 days before such meeting.

Among the callers at our eastern office the past week were: Messrs. Measure and McDowell, Union Cycle Manufacturing Company, Boston; Kirk Brown, Airtite Tire Company, Boston; D. H. Lewis, editor *American Wheelman*, Buffalo; Stillman G. Whittaker, Reverse Rubber Company, Boston; George F. Taylor, Ipswich, Mass.; "Jake" Bretz and Mr. Perkins, Liberty Cycle Company; Mrs. Peck, president Excelsior Cycling Club; L. A. Howell, Sterling cycles; Frank W. Green, New York; Frank Jones, "Cupid's Chariot" company; E. Hedger, Central Park Cycle Company; H. L. Saltonstall, Elizabeth, N. J.; J. R. Werner, A. M. Scheffey & Co.; A. A. Strauss, tire manufacturer; Fred T. Merrill and wife, Portland, Ore.; A. Kennedy-Child, Springfield, Mass.; Edwin Oliver, Cleveland, O.

#### The Manhattan A. C. Troubles.

The last creditor to clamor for his cash from the M. A. C. was the man who supplied the above luxurious organization with the butter and eggs, some \$2,000 being claimed, and the New York dailies hinted of an attachment. Peter Berlo was also in town looking for something, and W. W. Windle and H. B. Arnold were due in New York Dec. 24. From what the club people say cyclists and their expenses will be more than probably tabooed next year. Desperate efforts will be made to keep the club property intact, as the following statement proves:

The meeting was called for the purpose of nominating officers, and the limit of time for nominations having expired, the first business was the adoption of an amendment to the constitution enabling the nominations to be made. It was, however, the sense of the meeting that the present officials should hold over until the financial affairs of the club are straightened out, and a new board would then be selected.

George W. Carr, Walton Storm, Thomas M. Waller, M. H. Elkin and Frank McCoy were appointed a committee on finance, and they will lend their energies to better the club's condition. The principal object of the committee is to put through one of the various plans that were discussed at the meeting, and the one that has been practically decided upon will involve the funding of the entire debt at a lower rate of interest.

The indebtedness of the club is now \$350,000, and that sum includes a first mortgage of \$400,000 given in 1889 and due in 1897, and second mortgage bonds due in 1894 for \$250,000. The remainder of the club's debt consists of the scrip issued a year ago and of accounts with tradesmen.

The club claims assets of \$1,100,000 on the club house and site at Forty-fifth street and Madison avenue. Of the plans proposed for the extrication of the club from its difficulties, one is to sell the club's equity in the property for \$350,000, with an agreement on the part of the buyer to sell it back in three years.

Another plan is to provide for a reduction in the interest on the bonded indebtedness. The club now pays interest at the rate of six per cent, and it is thought that a mortgage of \$650,000 at five per cent can be executed.

The plan that is almost certain to go through provides for the raising of \$350,000 on first mortgage bonds at four and a half or five per cent, upon which the holders of second mortgage bonds will be asked to accept a new issue.

The issue of \$650,000 first mortgage bonds, added to \$160,000 second mortgage bonds, and \$50,000 in club scrip would make a total of \$860,000. With the stock on hand and house accounts due Dec. 1, the total would be \$910,000, which would nearly wipe out the total debt.

At the close of the meeting ex-Governor Waller said: "It is the general opinion of the representative members that the club is financially sound, and also that a method will be found to escape from its present embarrassment."

He thought that while the criticism of the press had added to the embarrassments of the club, still they had not been made with a desire to injure the organization, and that, as a matter of fact, there was more reason for the criticisms than there ought to have been.

#### Judged by Their Prizes.

So amateurs are in the future to be judged by the prizes for which they strive, and all who want to take a shot at real estate, pianos or coffins will be adjudged—what? Why, makers' amateurs, not professionals, which of course that class will be. It will be a glorious thing, though, for the professors; they will not be particular then about stating what their weekly stipend will be from the good manufacturer, while the "pure ones" will skirmish for their pots, medals, etc. But they will have all the fun, while the professor will get the swag. The N. C. U. will license amateurs and tag them as our bull pups are treated by the different cities, and you can expect to read that Bill Jones, of Leicester, No. 136, lost his tag for fouling No. 22, who rode a Wobble wheel of Hardcash

doing for the sport. A good roads organization is one of the things it has essayed, but no results so far have been noticed. A theatre party is Mr. Sheehan's first effort, which, no doubt, will do much for cycling—and possibly there is a little commission somewhere, as on that trip to Washington for the league meet. The association might, if it had capable officers, do much good for the sport, but it should first clear away the barnacles and elect a man president.

#### An Exhibition Row.

While in Boston, recently, a REFEREE man was told a tale of woe by several of the exhibitors at the Mechanics' Institute Fair, of which Col. Pope is a director, and as such was (as is usual) given some department to preside over. This is an old New England custom—not altogether a wise one, exhibitors think. As such, however, the genial and gallant had the selecting of the judges—another most injudicious course; and while no doubt Col. Pope acted to the best of his ability in his selection, the other exhibitors wouldn't have them (the judges) at any price. They were as follows: Abbott Bassett, secretary of the L. A. W., a director of the Boston Art Club and a Mr. Robinson. Capt. James Underwood (Quadrant), Major "Billy" Atwell (New Mail),

& Co. Mr. Raymond impressed on the REFEREE eastern representative that '93 was going to be the banner year for the festive amateur, and wished the REFEREE to wake Chicago up, so that the city by the lake would be ready for the great World's Fair tournament and the influx of foreign racing men early next spring. He wants to be sure that the track and other training necessities are all ready, and expects Chicago to furnish everything it promised for the great World's Fair racing. The truth is, the L. A. W. racing board chairman thinks Chicago promises more than it can or intends to provide, and he is anxious on that account. It is to be hoped for the sake of the sport that Chairman Raymond's promises to the International Cyclists' Union will be made good by Chicago, as the starting point, be the men who will race amateurs, makers' amateurs or cash prize tigers.

#### The M. A. C. C.

The Metropolitan Associated Cycling Clubs, whose existence and purpose has been somewhat of a conundrum to cyclists in and around New York, filled C. H. Luscomb's place as president, he having resigned, by the very boyish and not over popular Charles A. Sheehan. Sheehan's strongest point is his cash prize proclivities in the sport and his fondness for speechmaking. The association meets, and that's about all it has done in the past, and few outside of the delegates know or care to know what it is

W. W. Stall (local maker), V. Duguson (local maker) and one or two others picked the judges to pieces, entered a peppery protest, and refused to allow them to pass opinion on their wheels.

These were the charges against the judges: Abbott Bassett—an out and out admirer of the colonel; the art man—rides a Columbia and receives one for his artistic use yearly; Mr. Robinson—a paper maker, whose son is a Columbia agent near Boston. The charges look well in print, but the judges were too indignant (or in too much of a hurry) to resign, so they sent in a letter to the director of the cycle exhibit (Col. Pope), stating that their honor had been touched and they would not pass their opinion on such naughty exhibitors or their goods. So no one gets the gold medal, and here is a chance for some speedy pure one—and the exhibition of cycles broke up in a row.

One of the judges told a REFEREE man that Captain Underwood and Major Atwell led the anti-Pope forces, and the others chipped in.

"What have you to say regarding this charge, William?" the REFEREE man sternly asked.

"Oh, they brought me a paper to sign, and asked me would I join in the protest, and I said: 'You just put little William Read & Sons down as in line.' Last year we got a silver medal, and this year it looked as if we wouldn't get potatoes. Of course we kicked—who wouldn't? Why, they exhibited agricultural imple-

ments—well, trotting sulkies. I kicked about that and said this was no Neil Burgess county fair. But then they had me 'on the hip'—they had me, they had me," laughed Major Billy.

"How did they have you?" asked the querie.

"Why, you see, I had five beautiful, highly polished yacht guns over my exhibit, and Sterling Elliott looked up and said, 'this is not the war department; what do you want a gun for?' I told him that a gun was necessary to keep such people as he from stealing New Mail ideas. But they had me there; they had me there," and William's curly locks danced with merriment, and his soft chuckles could be heard until I reached the street door.

"It was all preposterous to charge us with scheming to give the medal to the Columbia people," said one of the judges, but it effectually spoiled the awards.

It does seem, though, that three ordinary mechanics or repairers would make better judges than those Colonel Pope selected. Paper manufacturers and picture makers are not the most capable people to judge the quality and finish of bicycles, and going on the opposite theory—about "what's in a name"—they might have erred, but not willfully or knowingly. Colonel Pope, of course, laid himself open to criticism, but who would question his honor? The writer does not, but men make mistakes sometimes, and it would seem one was made at Boston.

#### An Old-Time Champion.

The REFEREE correspondent was inquiring the other day as to what had become of the old-time K. C. W. racing man, Ed Pettus, who used to wallop 'em all. Learning that he was the up-town manager of the New York World office I dropped him a line, and here is what he said in reply: "It is 'many moons' since I last saw your smiling countenance, and was reminded of the old-time racer when I received your note some little time ago. Although for several years I have been only lukewarm respecting the bicycle, I think it would take but little to coax me back into the fields where memories bring before me many happy days."

#### Ready for a Vote.

My altogether brilliant newspaper friend, Roland Hennessy, of New York, writes rock-bottom sense—as it appears to Roland, who is a pure amateur. Anyhow, Roland is out for purity—in amateurism—and loyally flaunts the battle-flag to the breeze. Roland is thorough in everything he touches. In this month's *Wheelman's Gazette* he attempts to solve the purity question by advocating the return to that hybrid, the promateur, and there Roland strikes the rock of impossibility. There can never be three classes—amateurs professionals, and promateurs. Professionalism, if properly organized and under a strong government, will flourish. So will amateurism. There is a sort of moral cowardice, a lack of self-respect, a fear of public opinion, in the proposition to spring promateurism; a catering to falsity and a lowering of manhood. It is placing a premium on humbuggery, a sort of Barnum woolly horse proposition—a fear of something which has no foundation.

Promateurism (or makers' amateurism) will kill pure amateurism as dead as a door nail. Mark this prediction. Any rider of any ability will enter the employ of some maker, and as to salaries—the rage for high salaries in base ball playing will not touch it. Zimmerman, Windel, et al., will command the price of a good-sized factory. They will get

it, too, and the little makers won't be in it. I want you all to make a memorandum of the above. The amateur would have no show if makers' amateurs existed, for between the latter and the professionals they would be out of it in a racing sense.

### All "Pros" in Italy.

Manager Frank Bowden, of the Raleigh company, writing to a friend in America, says: "I thought of you whilst in Italy, where they are great believers in the cash prize system, so they are all

twenty-mile-an-hour railroads in order to lug home a lot of stuff which will be perfectly useless to them and upon which the railroad company would charge them about full value for freight."

### More Truth Than Poetry.

A JINGLING TALE OF THE FALL OF TWO ARCH SCHEMERS.

They were two riders bold,  
And they had a certain hold  
On the makers of two certain kinds of wheel  
They thought they'd play a trick,  
But they laid it on too thick,  
Now they haven't got enough to buy a meal.

They were entered in a race  
For the making of the pace,  
Each relied upon the other to begin.  
But what neither of them knew—  
Though they knew when they were through—  
Was that each was paid to let the other win.

So they tried their level best  
To make feathers for their nest;  
For a race it was the merest imitation.  
A snail's pace they didn't beat.  
Since the judges called "dead heat!"  
They've been looking for another situation  
ROLAND HENNESSY.

### Chicago C. C. Nominations.

Friday last a mere handful of members of the Chicago C. C. met to make nominations for next year's officers. It was decided that the candidates having the highest vote should be placed on the regular ticket, and those receiving the next highest on the opposition. The nominations, for the regular and opposition tickets, respectively, follow: President, C. E. Randall, N. H. Van Sicklen; vice president, W. F. Cameron; secretary-treasurer, M. G. O'Brien; captain, Charles P. Root, H. A. Githens; directors, W. C. Thorne to succeed himself, H. J. Cassidy, H. C. Foster to succeed C. E. Randall; delegates to Associated Cycling Clubs, Randall, Root and Garden; representatives to division, Bode, Cameron, Berger, Miles, Van Sicklen.

### THE "COLONEL'S" PLAN.

*He Would Have Meets Pay Clubs for the Services of Their Riders.*

EDITOR REFEREE:—As one pauses to consider, it appears strange that of the many devotees and followers of the "winged wheel," more do not come to a realizing sense of the remarkable network of illusions and falacies that have been gradually and slowly spun around that mystical creation—the amateur. It is a very un-American idea—I might even say un-modern—as in all else man turns his ability in any particular direction into an aid in his pursuance of the mighty dollar. The young man who sings, or paints, or performs upon the piano, or, in fact, shows uncommon excellence in any art, science or skill—is he looked upon as a social outcast if he accepts a remunerative engagement? I can not see that the average bookkeeper or clerk goes through any more rigid preparation for his work than does the crack rider of to-day, as I feel that training contains far less pleasure than the usual course of study. Still, under the exhausting conditions, a man has to continue at his ten or twelve dollar a week job when he has the ability to furnish that for which the public stands willing to pay many times that sum.

Following the same idea, I should think some enterprising exponent of the present amateur condition would get up a handicap singing contest at Chicago's great Auditorium during the World's Fair. Just imagine what a card it would prove with Patti on scratch and Lottie Collins at the limit mark; with all the other celebrities strung along between. I dare say that Vose & Son would pay Patti's expenses and furnish her with a red, high gear piano with rat-trap pedals and scorching stool, and feel reasonably certain that almost any music

house would donate a stool or piano cover or something like that to be put up as a prize. I wonder how many Booths, Barretts, Modjeskas, Pattis, and a host of others we would have in the future if such a policy should supercede the present method.

Chicago can support three horse tracks and support them well, and yet its one bicycle track has been a matter of uncertainty almost since the last load of gravel was put on. In a late issue of the REFEREE the Chicago riders are censured for accepting their expenses. I wish some one would kindly explain to me *why* the promoter of that meet should not pay in some manner for the services of those people, who very materially assisted them to clear several hundreds of dollars. It seems to be a policy of something for nothing. [The meet was run under league rules; the riders in sending in their entries agreed to abide by those rules, and the rules forbid riders to accept expenses from any person or club other than the one he represents. —ED.]

If, however, the cash prize system will not be accepted, I would suggest something like this: Have the promoters of the various race meets offer nothing but cash prizes. That doesn't look much like preserving one's amateur standing, does it? But let us see. Why not make these checks payable to the club under whose colors the winner rides, the club in turn giving the rider an order for anything he may choose? You might also form a rule in which the club be allowed to deduct the racer's expenses. This plan would not only detract a great deal from the expense account of the average racer—at present a luxury all clubs can not afford—but would also give a man some return for his time and labor, and he would still be "one of the fold" of snow-pure whiteness. Will some of my elders please comment?

THE COLONEL.

professionals; yet strange to say, there is not a maker's amateur among them, and the best of it is, they all buy their machines. Isn't that glorious? \* \* \* Nine of them are Italian millionaires—that is in France—including two counts and a marquis. No played out old nobility in those three men. But they don't see the fun of making trips of three or four hundred miles on their darned old

## A PROSPEROUS CLUB.

*The North Side C. C., of Milwaukee, and How It Has Grown.*

The North Side Cycling Club is noted as being one of the leading road clubs in the Cream City, and numbers among its members many who are hard to duplicate for speed and endurance. The club was organized in 1891, through the efforts President Gerhard Anssen and other congenial spirits who recognized the necessity for a live, bustling club in the section of the city in which it finds its home. As its name would imply, it is located on the north side of the city, its large and elegantly furnished club rooms being situated at the corner of Third street and North avenue. The membership, consisting of only a score or more in the beginning, has grown with an active energy until at the present time it numbers almost a hundred. Besides its large contingent of road riders, the club has a number of very prominent racing men, at the head of which is

G. ANSSEN.

Hugh Meiswinkle, who recently road a mile in the Exposition races in 2:36. Among others who will no doubt hustle the club colors to the front next spring are Billerbeck, Siegre, Wendlandt, Pierson, Roethe and Karros.

The club has been very active during the past season, and numbers among its successful undertakings a century run, in which seventeen out of twenty-two of its members finished within ten hours, all of whom were presented with a solid gold medal by the club. They also gave two road races for members which attracted considerable attention. It is the object next year to give a road race on a large scale, open to all. The club is in a highly prosperous condition and bids fair to exercise a potent influence in cycling matters in the Cream City. The officers are as follows: President, Gerhard Anssen; vice president, E. E. Miller; secretary, T. Pierron; treasurer, E. A. Roethe; captain, William Breckenridge; first lieutenant, Fred Jansen; second lieutenant, A. Bunte; buglers, Charles Schuetz and C. Zobel; directors, James E. Reitea, Peter Nock, A. Bunte, G. Anssen, L. Pierron, E. A. Roethe.

## Gibson &amp; Prentiss Cycle Company.

The '98 machine of this house is constructed of English tubing with drop forgings throughout. The bearings are turned from bar steel and carefully hardened. The sprockets are hardened and can be readily changed to any gear, and are fitted to a hardened chain. The wheels have patent hollow rims, the front being 80 inches and the rear 28 in diameter. The machine is manufactured in three weights, 24, 28 and 35 lbs.

## THE MILWAUKEE RACES.

## Githens Captures Three Firsts and Breaks a Record.

The Christmas day races of the Milwaukee Wheelmen at the Exposition building did not prove as successful as those held on Thanksgiving day. This was because of the extreme cold weather, making it almost impossible to heat the building and also because Sanger did not ride, thus lowering the attendance. The contestants were compelled to bundle up in order to keep warm, but good time was made, nevertheless, Githens breaking the two-mile indoor record, doing 4:51 3-5. Davis and Githens were the only Chicago men who made a successful showing, though Ulbricht, Leonhardt and Steele rode in several events. Githens captured three firsts, Davis, Bowen and Becker each two seconds, and Cottrell, Becker and Meiswinkle each one first. The summaries follow:

One-mile, handicap—First heat: B. Cottrell, 1; A. Bartels, 2; time, 2:33 1-5.

Second heat—George Becker, 1; C. Breckenridge, 2; time, 2:37 3-5.

Third heat—J. R. Bowen, 1; Mattie Stark, 2; time, 1:46 2-5.

Final heat—B. Cottrell, 1; George Becker, 2; time, 2:38 3-5.

Two-mile, open—First heat: George Becker, 1; J. C. Schmidbauer, 2; time, 6:12 3-4.

Second heat—H. A. Githens, 1; C. W. Davis, 2; time, 6 min.

Two-mile, open—First heat: George Becker, 1; J. C. Schmidbauer, 2; time, 6:12 3-4.

Second heat—H. A. Githens, 1; C. W. Davis, 2; time, 6:07.

Final heat—H. A. Githens, 1; C. W. Davis, 2; time, 6 min.

One-mile, 3:00 class—First heat, H. Meiswinkle, 1; J. C. Schmidbauer, 2; time, 2:55 3-5.

Second heat—J. R. Bowen, 1; Mattie Stark, 2; time, 2:58.

Final heat, H. Meiswinkle, 1; J. R. Bowen, 2; time, 2:52 1-5.

One-mile, open—First heat: George Becker, 1; Gus Steele, 2; time, 3:04.

Second heat—J. C. Schmidbauer, 1; John Bowen, 2; time, 3:02.

Third heat—H. A. Githens, 1; C. W. Davis, 2; time, 2:57.

Final heat—H. A. Githens, 1; George Becker, 2; time, 2:44 2-5.

Two-mile, handicap—First heat: George Kuntzel, 1; George Becker, 2; time, 5:57.

Second heat—H. A. Githens, 1; Henry Gordon and Steele distanced; time, 4:51 3-5.

Third heat—J. R. Bowen, 1; A. Bartels, 2; time, 5:46 2-5.

Final heat—George Becker, 1; J. W. Bowen, 2; time, 5:25 2-5.

## THE INTERNATIONAL CIRCUIT.

## Chairman Raymond Makes Several Excellent Suggestions.

Chairman Raymond of the racing board has issued a communication to race meet promoters throughout the country, urging them to make application for places in the proposed international circuit. The plan is a good one and will avoid much trouble in arranging dates. Heretofore each club has selected its own date, and the result has been that those following the circuit have had to do an extra amount of traveling. Mr. Raymond's circular reads as follows:

It is well known to you, no doubt, that the present racing board have formulated plans for an international circuit of race meets to be held in the fall of 1893. We desire at this time to call upon the various clubs who might be interested in this project to place themselves in communication with the undersigned at an early date, upon the conditions named below. We are mind-

ful that we are in a measure usurping the powers and work that will fall on the shoulders of the new racing board, to be appointed next February, but we believe that the matter needs immediate attention to insure the most complete success. If the main details which necessarily surround such an undertaking are left until within a few months of the opening circuit, we are certain that much that will contribute to the welfare of all concerned will be neglected. The conditions which we are bound to attach to all applications for places in the circuit we do not believe will be viewed as hardships, but will be plainly evident as necessary to universal benefit.

1. All applications must be in hand on or before Feb. 15, 1893.

2. It is understood that unless something unforeseen occurs the opening date shall be awarded to Chicago the first or second week in August.

3. All dates to be awarded by the racing board. Location, as regards distances and convenience of arriving at cities, to be the governing rule in assigning dates.

4. Each club agreeing to furnish the proper track and all facilities to obtain the very best results for their meets.

It is, of course, known that a number of foreign racing men will be our guests next season, and we bespeak for them your very best courtesy. In this direction we request such clubs as can do so to prepare their tracks in advance of the holding of the meets, and advise this board if they will be prepared to entertain any of the visitors. It will undoubtedly be the desire of the new racing board to be able to send the men, when they arrive, to some destination where they will be made welcome and treated properly. It is only proper that the new board be placed in a position to be able to say to a man when he arrives, that a track is waiting for him to train on, and assure him of club privileges at the home club. A place to keep his wheel and wearing apparel makes a man feel at home at once. To this end we ask your aid, feeling confident of the nature of your response.

## THE GREAT AUSTRAL RACE.

## Won Easily by Lambton from 200 Yards—Thirty-eight Starters.

The great Austral wheel race for 1892 is over, and the prize, £200 pounds in cash, was won by H. H. Lambton, who received a handicap of 200 yards in the distance, two miles. The event was run on the Melbourne cricket ground on the first day of the Melbourne Bicycle Club's spring race meeting, Nov. 9. A cool grey day, and the people streamed down to the cricket ground by thousands. They kept coming all the afternoon until 8 o'clock when the assemblage was a most brilliant one—probably 16,000. Such a gay crowd, in holiday attire, I never saw at a bicycle sports gathering before. Mind you, there have been larger—for 25,000 is the record for an Austral day—but the splendid throng of ladies beat everything that had gone before. The lawn and stand looked like a vast garden of brilliant flowers; this and the beautiful green oaks and elms around the cricket ground, the bright green sward and colored satin jackets the riders wear made up a most animated scene.

There were thirty-eight starters in this Austral for three prizes—total 250 sovereigns—and the whole lot started at once from starts varying up to 350 yards in two miles. From the time the handicaps appeared Lambton was first favorite. He had won the same event in 1887 with 210 yards start, and since then had not done much racing. After winning in '87 the New South Wales Union held an enquiry into his running previous to the Austral, and decided to disqualify him for two years for fluctuation of form, which he was alleged to have practiced previous to the big race in order to deceive the handicapper. Ever since then he has been regarded with mystery, and when he was allotted 200 yards this year there was a great cry out amongst the other riders; but nothing was done, so he started and won somewhat easily.

Besides the £200 prize he landed a few extra hundred in wagers.

## ABOUT THE WINNER

He is a quiet, unassuming young man of twenty-five, years and his father occupies the position of secretary to the general post office at N. S. W. Lambton is not a strong man, and several times during his training for this Austral he has been known to roll off his trainer's chair in a faint while being rubbed down. He lived at the leading track with his trainer, Lee, who is the caretaker, and his training performances were kept very quiet, because he could train in the daytime when no one was about. Early on the Sunday morning before the Austral day, he made his final spin and then the knowing ones knew who the Austral belonged to and "got on" all the "stuff" they could.

Being honorary secretary of the Melbourne Bicycle Club, Lambton had the privilege of a private room for himself, a friend and two trainers at the Melbourne cricket ground on the day of the meeting, while all the rest of the riders had to rough it in the general competitors' room. Lee was rubbing Lambton's limbs with brandy while outside you could hear the murmur of the multitude in expectancy for the big race. "I would like some champagne," said Lambton; but Lee said "bosb," and would not let him have it. It was an anxious, nervous time for the candidate as the minutes rolled by. The time arrived and thirty-eight riders in satin colors and mounted on ordinary (high) bicycles filed out to their places, from scratch to 350 yards, the limit line. The air was calm, the sky overcast, and rain threatening. The course of grass, four laps to the mile, was in superb condition—rolled as hard and smooth as pavement and clipped so short that only the bare color of grass was there. "Just Lambton's day" was on everyone's tongue, and so he started the warmest favorite.

## SIX WENT DOWN.

For the first mile Kerr, the limit man, led the field, but there were thirty-seven others behind him and each one riding all he knew for the £200 prize. In the sixth round half a dozen riders came down in an awful crash through an awkward move of a clumsy rider. Lambton was just ahead and escaped the catastrophe. Next lap he was leading and people could see pretty well then that the Austral was settled. He kept the lead and when the bell rang rode like a demon, getting further and further ahead till he shot past the post a winner by a dozen yards from C. E. Rankin.

The programme for the two days' meeting was a most extensive one, thirty-one events altogether, counting heats, and the prizes amounted to 460 sovereigns, paid in cash. (There are no trophies given in Victoria at all now.) As a whole the meeting was a grand success, and resulted in a net profit of £200. The total expenses being £900 while the receipts were £1,100.

## QUEER OBSTACLE RACES.

All the M. B. C. race meetings finish up with an obstacle bicycle race, and they are immensely amusing, so much so that scarcely a person leaves the ground till they have been run. The distance is one mile, and in each of the four laps the competitors have to surmount seven various obstacles, viz: A pile of sugar mats filled with sand, ride through grooved boards, lift over hurdles, under a low hanging pole, over tilting boards, and a heap of loose earth and round barrels. The more spills the merrier, and men never get hurt.

I don't know how you racing men dress; some men, I know, prefer to wear as little as possible, and would be quite

The Stability and  
Wearing Qualities of

Are Known to Every Prominent Dealer and Wheelman,

# RUDGE CYCLES

Not only in America, but nearly every country in the world. Twenty-five medals have been awarded the manufacturers of these World-Renowned Wheels for excellency of workmanship and design from almost as many countries.

**THE RUDGE** now being made in a Rudge American branch factory in our city, under our own supervision, from finished bearings, forgings, etc., will be fully up to (excel if possible) the high standard of finish and workmanship that has made them famous throughout the world.

We Offer These Goods on More  
Favorable Terms

Than ever, and dealers and wheelmen purchasing them can rest assured they are getting the highest possible grade. Not one ounce of material that would tend to lessen the cost or quality of the product enters into their construction, but the best that money can buy is used throughout. Write for Catalogue—now ready.

**RUDGE SCORCHER, NO. 1,**

Agents Wanted. EXCLUSIVE MANUFACTURERS AND IMPORTERS FOR THE UNITED STATES.

satisfied if allowed to compete with merely a silk handkerchief around the waist. In Melbourne color regulations are strictly enforced. Each rider registers a color, which he most always races in or pay a fine. The style at first was

sometimes objected to by riders, but never now. The pattern is a close-fitting satin jacket with long sleeves, jockey cap, white flannel knickers and black socks. The appearance of a field of riders so attired is very effective and gives tone to the meeting.

#### NEXT YEAR'S RACE.

The next Austral will take place in November, 1893, and the three prizes will total £250 or more. It will be run on safety bicycles, probably in heats of four and a final. We hope to see some of your men here—a good team could, I feel certain, make a tidy little sum. We have heard a lot about Zimmerman and Johnson, and would like to see both of them.

The road contests, in which eight Melbourne clubs are competing for the title of premier, still command attention. Last Saturday, when the fourth monthly round was held, the heat was terrible—147 degrees in the sun—but still many of

the men faced the starter for the twenty-six mile ride. It was the first real summer day we have had this season, and, as you can imagine, was no day for wheel racing. Duff was the fastest man, 1 hr. 52 min. 28 sec. The Southern District and Fitzroy clubs are now leading, both having sixteen points—the highest number obtainable. The trade has benefitted largely by these road contests, as they have given a great fillip to cycling.

#### CASH PRIZES ALL THE GO.

Cash prizes are fast wiping out the old-fangled ideas of amateurism, and the day does not appear too far distant when all the Australian colonies shunt trophies altogether. A new amateurism may sprout up afterwards, but it will be many years before it can grow to anything. New Zealand just now from end to end is agitated over this cash prize business, and while more than half are for the shekels, the balance are not converted yet—but they will be.

One of the features of the M. B. C. races was the riding of a visitor, G. Roth, who hailed from a cattle station in the centre of Australia. Roth is a horseman, who can take a fence with the best of hunters, and he got a bicycle, learned to ride, and then traveled a thousand miles to race at an Austral meeting. He rode the obstacles splendidly, and won the chief event of the second day, £60 in B. C. stakes.

AN IDLE BOY.

\* \* \*

#### Waller Going to England.

Frank Waller, ex-champion twenty-four hour rider, was in Chicago last Friday and Saturday. Waller is now employed at Plymouth, Ind. He starts training early next year for the Pullman road race and the Cuca Cocoa grind at London July 21 and 22. He is now

building a special machine for early season road work, which is to be fitted with a special set of three-inch tires. He is confident that he can do 100 miles in less than five hours, having ridden eighty miles on the track at Stockton, Cal., in four hours, while training, and without pacemakers, timed by two competent men. His record ride last year was undertaken with the idea of just beating Holbein's record, which he accomplished, doing 364 miles 1,560 yards. Waller is 5 feet 10 3/4 inches in height, and weighs, out of training, just 154 pounds, the same weight and height as Spooner, who now holds the American record. Waller looks a giant beside Spooner, being broad shouldered, with no superfluous flesh. He increases in weight under hard training. He thinks that 435 miles in 24 hours is possible, and goes to England to defeat Shorland on his geared ordinary. He is very modest and unassuming and does not at any time make any brag of his ability. He expects to leave for England about June 1, returning immediately after the great race for some long-distance record trials on the World's Fair track. He will attempt some road work in England, both on the safety and tandem, previous to the Cuca Cocoa race.

\* \* \*

#### He Told Some Fairy Tales.

A Chicago man recently met at Cincinnati a rider who had ridden from Chicago to that city in six days, and who claimed he was going south to New Orleans in the same way to meet and race Johnson for \$1,500 a side. He said he had ridden a mile on Parkside track in 2:16 and could do 2:06. His wheel was a heavy roadster and had strapped to the head a large wooden box in which was stored cold cooked vegetables and meat. This man claimed to be a member of the Oak Park Cycling Club and

his name to be Francis. His appearance was that of a man who had made a hard ride. An inquiry of Milton Mills and A. W. Hatch, of Oak Park, revealed the fact that such a man lived in Oak Park, was a ne'er do well, and a rider who was always on his wheel, but never fast. These men said he was a man who would, if possible, ride around all winter with an oil stove on his handlebars and that he might have been deranged and wandered away. They scoff at his riding in 2:16 or even 3:00.

\* \* \*

#### Indoor Meet at Buffalo.

The season for indoor games at Buffalo will shortly commence. The arsenal on Broadway has been put in magnificent condition for these events and has been remodeled throughout, \$26,500 having been expended on it. One of its most interesting features, to wheelmen, is the new floor, which is very fine. It is proposed to have some very interesting events just as soon after the first of January as they can be arranged. Indoor events have always proved very interesting to Buffalonians and they have developed several very speedy men, who otherwise would not have been heard of.

\* \* \*

#### America's Only Cement Track.

Savannah, Ga., has the only cement track in America. This is a quarter-mile, thirty feet wide and banked four feet on the turns. On this track the Savannah wheelmen will give a national tournament Feb. 23 next. The Chicago riders will be urged to go down. J. Elmer Pratt, traveling for Gormully & J. ffery, helped design this track.

Collins & Nuttall will soon take possession of their New York store on Twenty-eighth street and Eighth avenue, and will handle the Coventry Cross and Cleveland wheels.

## SOME INDOOR AMUSEMENT.

*Saturday Night at the I. C. C.*

Saturday evening was guest night at the Illinois Cycling Club. On such occasions the club members receive one guest ticket. On this occasions and, in fact, on past occasions, the privilege has been greatly abused, many coming without tickets and overcrowding the gymnasium. This will be stopped hereafter, tickets at the door being positively required. On the above occasion over 400 members and guests crowded into the gymnasium. Several men who were not members claimed to be such, and on being apprehended were ordered out, as were quite a few who held no guest tickets. Circus seats at one end accommodated 135, and over 400 were finally taken care of. The programme consisted of class work by the club men, sparring, one bout to a finish, fencing and wrestling. A number of talented ones from athletic orders took part.

\* \* \*

*A Midnight Run and Then Refreshments.*

The annual run of the Midnight Wheelmen occurs Saturday at midnight. The party leaves the Lincoln club house at 11:30, rides for an hour or more—all according to the weather—and finishing at some restaurant, will have a layout of oysters and such, with speechmaking, songs and story telling to while away the hours "till daylight doth appear." Cyclists are welcome, all attending being made members of the Midnight Wheelmen.

\* \* \*

*A Party Next Week.*

The Excelsior Cycling Club of New York will give an opening reception at its elegant parlors at Hotel Pomeroy, Broadway and Central Park, Thursday evening, Jan. 5, when Mrs. Peck, the indefatigable president, will welcome her eighty members of both sexes, and visitors, who are welcome. This club promises to be the most successful of any New York organization, if the present splendid progress is maintained.

\* \* \*

*Eat, Smoke and Tell Tales.*

Every Sunday evening of late a merry party of Lincoln club men has gathered at the club house, where supper is prepared by the steward. Over cups of good coffee, sandwiches, pie and other edibles, jokes are cracked and an otherwise dull evening passed very enjoyably.

\* \* \*

*In and About Chicago.*

Last Thursday evening the Oak Park Cycling Club gave its annual Christmas entertainment.

The holiday party of the Chicago C. C. is announced for Thursday evening of this week, at Rosalie Hall.

Members of the Cook County Wheelmen have formed a dancing class and are taking instruction at Berry's Hall.

The Lincoln Cycling Club promises shortly to spring on the cycling public a novelty in the entertainment line which will create a sensation.

Wednesday the Ravenswood club celebrated Christmas. A tree, gaily decorated, was loaded down with gifts of a humorous nature, in the delivery of which much fun was obtained.

The Æolus Cycling Club has awarded to V. Olsen the diamond medal offered early this season for a handicap pool tournament. Olsen had a cinch from the scratch mark, and interest in the event lagged, playing stopping altogether. Olsen was in the lead at the last and was finally awarded the medal.

*The "Two-Fifty" Club's Annual.*

The annual run of the Two-Fifty Club will occur on New Year's day, all

cyclists being invited to participate. This run is taken every New Year's day from Thirty-fifth street and Grand boulevard to Pullman and is in reality a scratch race of the local giants to determine who shall hold the honor of being chief scorcher for the ensuing year; the winner being so decorated over a huge mince pie and bottle of wine, given him by the landlord of the Hotel Florence. Van Sicklen won last year's scorch.

*More Lincoln Tramps Scheduled.*

Members of the Lincoln Cycling Club will shortly inaugurate a system of Sunday tramps to neighboring towns, for exercise and pleasure. In English walking suits, the hardy athletes leave the club house at about 10 o'clock, canes in hand. A good swinging gait is struck, and in the fine bracing atmosphere the cold is forgotten. Evanston, Maywood, Pullman, the World's Fair grounds, Riverside and other objective points will be scheduled, where dinner will be taken and the return trip made in the afternoon. On these trips last spring as many as twenty attended. The Lincolns originated the idea.

*When You Travel in China.*

The high regard in which the scholar is held in China is shown by the honors granted to the two American bicyclists who recently reached Shanghai safely after a perilous trip across the plains of Central Asia. The best passport these men had was a placard fastened to their wheels saying they were "traveling scholars." This gave them right of way as no other recommendation would have done, and when they reached Peking it furnished them an audience with the great Viceroy Li, who showed them marked attention, complacently remarking that "a scholar should be courteous to scholars."—San Francisco Chronicle.

*Books and Pamphlets Received.*

The REFEREE acknowledges the receipt of the following:

"Cycle-Infantry Drill Regulations," by Brig. Gen. Albert Ordway; published by the Pope Manufacturing Company's.—This little publication gives diagrams for all manoeuvres, the commands, care of the cycle, trumpet calls, etc. Exception must be taken to rule 53—position of the cyclist mounted; see editorial page.

Toledo (Ohio) Bicycle Company's 1893 Catalogue—Shows Dauntless roadster, 25 pounds; scorcher, 32 pounds; racer, 24 pounds, and a neat ladies' wheel.

St. George's Engineering Company, Birmingham, Eng., 1893 Catalogue—Shows eight styles of safeties, including a racer and road racer of same design. They weigh 28 and 25 pounds, respectively, and are as pretty in design as any wheels on the market, while New Rapids are known to be as good as any wheel made.

Toledo (Ohio) Cycling Club—Constitution, by-laws and membership list.

The R. T. Hall Manufacturing Company, Birmingham, Eng.—Illustrated list of parts of all kinds, etc.

Warman & Hazlwood, Chicago—Advance sheets of Coventry Cross cycles, giving specifications, etc., of Nos. 2, 12, 13 and 14.

J. K. Starley & Co., Coventry—Abridged list of 1893 Rovers, showing two styles of racer, two styles of road racer, two stoles light roadster, a ladies' wheel, the new "Popular" Rover and the Coventry chair. The latter is an invalid's tricycle with seat back for a rider, who propels the machine in the ordinary fashion.

Royal Cycle Works, Marshall, Mich.—Finely printed catalogue and exquisite cover, showing the Royal Limited, 27 pounds; light roadster, 34 pounds stripped; ladies' Royal, and cuts of various parts used in the wheels.

"Wagon Roads as Feeders to Railways," Albert A. Pope, Boston—A compilation of the opinions of some of the principal railroad men of the country.

Pope Manufacturing Company, Boston—Advance sheets of the 1893 catalogue, showing model 32, Century Columbia of last year; model 28, ladies' Columbia; racer; model 30, Relay of last year; model 29, Century stripped. Besides these the company shows illustrations of the elliptical gear wheel, the Columbia tire, a wheel fitted for military service and another to be used in connection with fire departments.

## FARMER JIM AND THE HEN.

*It Was a Common Thing, but Cost Him \$59 In Cash.*

It is a week or so since this little comedy-drama-tragedy was enacted, but it is none the less interesting, nevertheless.

We shall have to acknowledge that it was intended for the Christmas number, but as the illustrations were somewhat delayed in the process of manufacture, we were compelled to wait an interval of seven days in order to present the facts in their true light to our readers. It seems strange that a common hen—we have not heard that it was of any other breed—should prove so expensive a luxury as to cost \$59, yet such is the case. It all came about in this manner. Down in Berlin, in good old New England, near the home of Colonel Burdette, lives a farmer named James Warburton, who owned a hen—the same one of common breed spoken of before. The farmer lived close beside the road, over which a horrid bicycle rider frequently traveled.

Well, that hen got in Philips' (that's the bicycle rider's name) way once too often, then death to the hen was the result. Then farmer Jim assaulted Philips, smashed his wheel and everything else that Philips owned because the latter wouldn't pay for his dead hen. Then Farmer Jim was arrested, not only for smashing the wheel, but because he hung the hen's skin on a pole and would wave it at Philips. The case was tried in Hartford, Colonel Burdette's home, and as the jury thought Farmer Jim had shown malice in flaunting that hen's ghost from the end of a post, it assessed him \$7 for a fine and made him pay \$52 costs—and the end is not yet. We have not learned what the end is, but can imagine an appeal, possibly another suit, perhaps even another case of assault and broken wheel, or perchance a duel. We understand, however, that the colonel will take a hand in the scrimmage next time and will see to it that the interests of the wheelmen are protected.

*Elected Officers.*

The annual meeting of the Audubon Bicycle Club, of New Orleans, took place last Saturday night at the club's handsome quarters on Napoleon avenue and Prytania street. The report of the treasurer showed that the club was in a fine financial condition. The following officers were unanimously elected: Presi-

dent, Vincent McEnany; vice president, R. J. Godberry; secretary, C. Rosenberg; treasurer, Peter Casse; captain, C. B. Morse.

*Milwaukee Notes.*

It is rumored that N. E. Oliphant, president of the Milwaukee Wheelmen, will shortly wed one of Washington's fair daughters. Nat has made himself very popular with the wheelmen, and his administration has been very successful.

Hal Coleman, chairman of the entertainment committee of the Milwaukee Wheelmen, is on the sick list.

At the recent Milwaukee tournament Githens won a Telegram bicycle. The Sercombe-Bolte Manufacturing Company decided to give Githens the best it could make, and is building him a 24-pound Sanger racer.

*Comedian Kelly a Cyclist.*

John T. Kelly, the comedian, is an enthusiastic wheelman, and while in Milwaukee playing an engagement took advantage of every available opportunity for a spin. It is needless to say he is an ardent advocate for good roads.

*Down Among the Bluffs.*

The friends of Charles Price will be glad to learn that he is having success on his South American tour. In a second letter he states that he is having a grand time, and that the people in that section of the world are very enthusiastic over the introduction of cycling. He is at present making a tour of the island near Kingston, Jamaica.

*A. M. Scheffey & Co.*

At the Philadelphia show A. M. Scheffey & Co., of New York, will show, besides a line of cheap wheels, six styles of the Wynnewood, all with cushion and pneumatic tires, as follows: A, 28 or 30-inch wheels, double diamond frame; B, 30-inch, Humber pattern; C, 28-inch, drop frame; D, 26-inch diamond; E, 26-inch, drop; F, 24-inch diamond. The Queen City line also consists of six styles—30-inch diamond, 28-inch convertible, 26-inch diamond, 26 and 24-inch convertible, and 20-inch drop frame.

*The Flying Badger is a Trainer.*

The Milwaukee Wheelmen have selected Terry Andrae as the club trainer, and will have a racing team next season. This shows the proper spirit of enterprise, and the example should be followed by all the other clubs in the Cream City.

*Who Is It?*

We sincerely hope Cycling has not intended this to represent President Harrison. The hat looks pretty familiar, however.

M. D. Rucker of Humber & Co. Coventry, is in Chicago.

One Word About TELEGRAM CYCLES FOR 1893.

They are Without a Peer---Built for Ease, Comfort and Durability.

*Sure to Satisfy, and Fully Guaranteed.*

**WHY?**

We pay 20 per cent. more for our TUBING than any other maker.  
We pay 10 per cent. more for our BALLS than any other maker.  
Our line embodies more original and valuable improvements than any other make.  
We are bound to have the Best of Everything cost what it may.

**Telegram Pneumatic Tire.**

PRICE, WITH RIMS, \$20.00 PER PAIR.  
Special figures in quantities on application.

THE TIRE PROBLEM SOLVED. No wires to kink, no paste, no wireworks. One minute for complete deflation, removal of inner tube and re-inflation.

E. Water Street,

**Milwaukee, Wis.**

DURYEA ANSWERS "MITCHELL."

The Spring Frame Man Thinks the Other Is Badly Mistaken.

EDITOR REFEREE: Regarding the spring vs. rigid frame matter, the gist of the whole matter is that "Mitchell" has had an unsatisfactory experience with spring frames and, like many others, jumps at the conclusion that they are a dead issue simply because they are in the hollow of the wave just now. Fads live and die, but that which has truth for a foundation will rise again, no matter how badly it be crushed. Mitchell is not posted; he is simply howling because the crowd does. Because one machine failed to suit him does not prove the principle faulty. If he has digested the available spring frame literature he should be able to tell at a glance whether or not any given spring frame is an advantage or a disadvantage. Mechanical science is governed by laws as exact and unchangeable as those of mathematics, and a very little study of these laws will show why one form of spring device is good and another worse than useless. Before he attempts to talk so glibly he should acquaint himself a little with the vibration question. He has not yet learned the first principles. He knows its history; he knows that every other vehicle has springs—would not be practical without them—and yet he says "I know from actual experience that on a light, rigid frame machine with pneumatic tires, a good saddle and an elastic spring saddle post, there is a larger absorption of jolts and jars than in the best spring frame wheel ever put out by any maker, and the push is well nigh a hundred per cent easier."

Poor, deluded mortal, he thinks he is in it—and I think so, too—but we differ in our opinions concerning the "it." Why, he never saw "the best spring frame wheel ever put out by any maker," much less ride it. Let me name him a test. Get a gong with an adjustable spring clapper; attach it to that rigid frame pneumatic with the highly-prized goose-neck saddle post; ride over a brick, adjusting the clapper toward the bell till the shock rings the bell. Now put the bell, without changing the adjustment, on the other machine. I can show him a machine built in 1889, weighing forty-two pounds, all on (including guards and brake), with solid tires, that won't ring the bell when ridden over the same brick. Ride this same wheel with pneumatic tires, and he can't even imagine the luxury.

As for the push—well, let us see what he says: "Fifty-pound wheels and spring frames"; "at least four to six pounds less weight"; "well nigh one hundred per cent easier." Therefore, if six pounds reduction (50, minus 6, equals 44), saves 100 per cent, twelve pounds more reduction (44, minus 12, equals 32), would save 200 more per cent; therefore, if his statement be well nigh true, we may expect to see the astonishing spectacle of two riders exerting themselves to hold a 32-pound wheel from running away.

Mitchell is evidently not any better at mathematics than at mechanics. Study up a little, old boy. I will send you a dictionary if you will send your

address. You have a perfect right to believe in stiff frames if you wish, but be careful about what you know. A little knowledge is a dangerous thing. I have no objection to your preferring a rigid frame; rigid frames are cheaper to build, have no patent complications, are easier to sell (that is, they are the fad now), easier kept clean, less likely to need repairs, etc., ad lib.; but the same is equally true of freight cars, so it offers no proof of merit whatever.

The fact remains as unchangeable as the Sphinx and as enduring as time that springs properly applied to any vehicle add comfort and save propelling power, and the goose-neck saddle post is not a properly-applied spring. Everybody knows that rough roads require work. When you are working hard there is little weight on the saddle, therefore, what good is the goose-neck? Echo answers, "What?" I then wonder, of what good is the goose that advocates them; but courtesy forbids my asking

C. E. DURYEA.

## THE NEW YORK.

A Wheel That Is Being Made for the Public, Not the Racing Men.

The New York bicycle, which is illustrated in this issue, is the product of a

in favor of the pneumatic tire and rigid frame over the spring frame, still our experiments have proven that for an every-day business wheel, which is ridden for convenience and comfort, a spring frame constructed on proper principles is really what is necessary, as it

FRANK M. SCHOFIELD.

will give lasting satisfaction to the user. It is unnecessary for us to go into the argument for or against springs and pneumatics, but we have had experts ride both over obstructions purposely placed in the way, and in no case have they considered the pneumatic in any way equal to our springs for comfort, al

THE NEW YORK BICYCLE.

firm well known for its fine machinery, the Demorest Machine Company. The New York Cycle Company, of 17 East Fourteenth street, New York, of which Mr. Schofield is manager, will control the output of the New York, and to that end will push the machine with the same energy that they had pushed their piano and sewing machine business. This company will shortly announce a novelty in the form of a brake which will operate on the sprocket wheel and is something new. Strength is what the firm is aiming at, and fancy weights will be ignored. Mr. Schofield and Mr. Wells, the assistant manager, state that they will build racing wheels to order, and will guarantee them to keep pace with all others.

In describing the New York the company says: "In placing our New York cycle on the market for public favor we have taken into consideration the fact, that to gain such we must give the very best value possible for the money. We have investigated and made thorough test of all high grade bicycles now in use, and have taken the points of merit in each, combined with what we consider elements of great advantage in the construction, as to durability and comfort. And although much has been said

though before riding it they have been perfect cranks on pneumatics."

## STANLEY SHOW NOVELTIES.

New Front Drivers and Gears and Wonderfully Light Wheels.

LONDON, Dec. 10, 1892.—The Stanley show provided English wheelmen with such a glut of new things that weeks will elapse before it is forgotten. Those makers who exhibited and filled up their books with orders are now busily engaged in fulfilling contracts. The other firms are rousing our curiosity to see their novelties in a month's time at the Crystal Palace. Already, as I shall show later, the Viaduct has cast off the deadly dull appearance its cycle shops wore during November. There will be much to interest the pressman and the public at the palace, but it seems to be generally feared that there will not be that attendance of agents and foreign buyers which constituted an important feature of the Stanley show. However, we shall see.

## EVERYBODY SATISFIED.

I have recently interviewed a number of the exhibitors at the Stanley show, but have failed to discover any dissatisfaction with the result of the exhibi-

tion. Both large and small traders reaped satisfaction from the warm interest taken in the show by the public. As for the promoters, they, too, are quite satisfied with the result—a net profit slightly in excess of last year's figures. Personally I confidently anticipate that there will be but one show in 1893—the Stanley show, embracing the entire trade once more. This year buyers came and freely placed their orders, going away satisfied and untroubled by thoughts of the palace. Patents and inventions were being bought up freely—more so than on any previous occasion. Perry & Co., gave a sumptuous dinner to their clients during show week at the Manchester Hotel, whilst the Rudge Cycle Company transported a crowd of its foreign agents to Coventry, dining them there, driving them out to visit the picturesque ruins of Kenilworth and bringing them back to town next day in a special saloon.

## MORE FRONT DRIVERS.

I have been lately examining the great show rooms on the Viaduct. Marriott & Cooper will not exhibit anywhere this winter. The recommendations of their customers appear to keep them constantly busy. J. K. Starley & Co. have not yet touched the f. d. safety, and appear determined to stake their future business on the Rover, but sudden conversions are of daily occurrence, and I hope they may not suffer loss from their procrastination. The latest statement on the part of J. K. Starley, that the f. d. safety doesn't steer well, is simply too funny. Let him try it. The Premier Cycle Company is showing a fine looking specimen of the f. d. type, with Crypto gear. Their novelty in rear-drivers consists of the adoption of a new kind of tubing, stronger and lighter than the ordinary material, the metal being made up in a scroll-like form. I like the appearance, which differs very slightly from that of ordinary tube, and the public will, I am sure; appreciate a full roadster safety with brake, full mudguard, pedals and saddle well inside thirty-five pounds in weight. The machine is shown on the scale. Starley Brothers have a light, fast-looking f. d. safety with the Perry gear and round cranks. It presents a stylish appearance, as does their new tricycle, with the "up to date" combination axle and bridge. The Rudge Cycle Company of course, has its f. d. on view, with a variety of other patterns. Humber, Singer and Cooper & Beddell betray no sign of supplementing their safeties with the new type.

## STOOD UP WELL.

John Marston has not rested satisfied with his Triumph scaling twenty-two pounds, but has since produced a safety weighing only seventeen and one-half pounds. There is nothing conspicuously fragile about the appearance of this machine except the spokes, which are the most delicate I have ever seen. It must, of course, be called a racer, but it has been ridden by a ten-stone rider over 250 miles on the road. One tire punctured and it was ridden on the rim for miles without a single spoke giving way. The new Sunbeam roadster (fully equipped) comes out at thirty-six pounds and is priced at \$90, including Carter gear case. Without the case it is \$82. It is fitted with 2-inch 1 3/4-inch and Sunbeam (Boothroyd) tires, and is altogether a well designed, handsome machine, quite up to date.

## ADOPTED A NEW GEAR.

Morris & Wilson have had to abandon the gear they were applying to their Referee f. d. safeties, in consequence of it having been discovered to be anticipated and patented by another inventor.

1893 MODEL.

TENTH YEAR.

# NEW MAIL

—WEIGHT, 35 POUNDS.—

**WILLIAM READ & SONS, 107 Washington St., BOSTON, MASS.**  
 ALBERT W. MOORE, Western Representative, MASONIC TEMPLE, CHICAGO.

M. & W. Style Pneumatic Tires, \$125.00.  
 1 1-2 Inch Cushion Tires, - 100.00.  
 Both Men's and Ladies' Patterns.

DESCRIPTION: Credenda Tubing, Long 10-inch Ball Head, Single Butt Ended Spokes, laced and strongly tied at intersections; Lapped Rim, very stiff; New MAIL Low Handle Bars, Cork Handles, 3-8 inch Best Chain, 6 1-2 Round Steel Forged Cranks, Dust Proof Ball Pedals with square rubbers, Garford Saddle, Tools Complete. Weight (stripped) 35 pounds, 60-inch Gear, 28-inch Rear and 30-inch front Wheel.

A Superb Light Roadster. Heavy orders already booked. Applications for Agencies must be entered NOW.

HIGHEST GRADE.

Also — THE BEST LINE OF CHEAP WHEELS in the market, from \$15 to \$100. Don't order your cheap wheels till seeing our samples and receiving our prices. NEW MAILS are to have a Great Year in '93. Look out for your Agency.

## WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

AS THEY SHOULD BE.

DIAMOND ROADSTER.

QUADRANT ROADSTER.

A little error crept into the advertisement of the Kenwood Manufacturing Company last week. The two cuts shown above were transposed, so that the diamond roadster appeared over the title of quadrant roadster.

town to one Edward Mushing, a valued friend who knew something of law and more of Yankee diplomacy than his friend. Three hours later he presented himself with the words of wisdom and diplomacy, and this time again failed to get the "stuff," being told that the paper would be preserved until a suit for broken lamp contract should be decided by a Yankee judge and jury.

The genial Birmingham man next day sailed for his native shores, promising to send over the British army and several Birmingham "coppers," while acknowledging that the Yankees were a clever lot. This was the story told by the electric wire overhead—and the manufacturer.

The REFEREE man paid the Premier company a visit last week and inquired if it had a draft around the place—in the neighborhood of the safe—that was once in the possession of Mr. Lucas of Birmingham. President Johnson looked surprised at the questioner and coyly turned questioner himself by asking, "Who told you about that?"

On being told that the REFEREE had the story and would print it as news, and would like to see how his story compared, he very reluctantly gave it, with the comment that he would rather the matter had been kept private. "But as you have somebody's else story I will give you my side of it. Yes, it is true that Mr. Lucas left a draft in my safe for £300—not a thousand—and had drawn £200 pounds against it. While west, and indeed while in this country, Lucas was with and under the influence and control of Edward Mushing of the Centaur company. So when we learned that Mr. Lucas had sold a heavy bill of lamps to McIntosh-Huntington of Cleveland, in spite of our contract (which runs from January to January) with him, we credited Mr. Mushing with leading our lamp man astray and determined to see our lawyers about it and a breach of contract. We incidentally determined also to hold the draft until such time as the case was decided, being advised legally in the matter. Mr. Lucas turned up a few days before he sailed and wanted his draft. We treated him very pleasantly, but gave him our unqualified opinion of his action in breaking our contract. We also told him we would have to see our attorney before giving up the draft. He went away and returned in three hours, and in the meantime our firm had considered the matter carefully, and determined, in view of possible false reports of our action being spread to our injury, we gave Mr. Lucas his draft, but have not dropped the matter, as it is a clear violation of contract. In the meantime McIntosh-Huntington innocently wrote us asking for samples of Lucas' goods. They must take us for

boys and not business men. Of course we knew they had secured the agency. We sold £4,000 worth of Lucas' goods in 1890, £6,000 in '91, and did a good business this year. I cannot understand why Mr. Lucas treated us that way. Our relations, personal, business and financial, had always been of the most satisfactory character to both parties. The contract was broken without a word of warning or of dissatisfaction to us. The only reason that Mr. Mushing could have to induce Mr. Lucas to sell to McIntosh-Huntington would be the fact that they are his agents and he a competitor of the firm we represent."

RECENT ENGLISH INVENTIONS.

New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Nov. 9, give notice in the prescribed form of such opposition.]

No. 479. H. C. Gray's "Improvements in the manufacture of compound pneumatic tires for velocipedes and other wheeled carriages." Jan. 9, 1892.—This invention relates to that class of tires in which the air tube is secured in place and protected by a detachable elastic cover and consists in providing for such tires a means of automatically repairing the air tube when punctured. To attain this object the air tube (B) is made of pure or non-vulcanized rubber which, retaining its tacky character, will if pierced or cut during wear by its elasticity effect the cohesion of the severed parts and thus restore soundness to the air tube. The liability of the air tube to be punctured is minimised by the elastic cover (C) which laps around the air tube (B) and rim (A) and is made of canvas coated on opposite sides with vulcanized rubber compound and thickened at the tread by the application thereto of a band or strips of the like material. The whole is then vulcanized. The cover is attached to the rim by bringing the edges to a butt joint between the rows of spokes and securing the edges by herring bone sewing or otherwise. A strip of canvas may be cemented over the edges. As a modification the air tube may be made of equal thickness throughout, or again the outer cover may have a flat tread.

No. 2,451. R. Edlin's "Improvement in tires of wheels for bicycles, tricycles or other rolling bodies." Jan. 9, 1892.—The object of this invention is to make it possible to withdraw the air tube from the tire without removing the whole of the tire or even the outer cover from the wheel. The air tube (A) is preferably formed in a single length having one end (A1) provided with a short sleeve into which the other end (A2) is received, the two ends being preferably tied together by tapes (C) or other convenient means secured to the sides of the air tube. The outer cover (D) is preferably in the form referred to in Dunlop's specification, No. 4,116, 1889, except that a portion of one of the sides constituting a flap (D) may be left loose so as to admit of the air tube being

withdrawn. This flap is preferably ten inches long and has a series of eyelets (D2) which when the air tube is in position are placed over a similar number of screw threaded studs (F) or equivalents projecting from the back of the rim towards the centre of the wheel. A plate shaped

to the rim of the wheel and provided with holes is placed over the studs (E) upon the flap (D1) and the whole are then firmly secured by nuts being tightened over the studs (E). When it is desired to remove the air tube from the wheel the nuts are unscrewed, the plate lifted off and the flap opened. The tapes connecting the ends of the air tube are undone, the valve (B) pressed through the opening in the rim (G) and the air tube drawn out, a string being tied to one end of the tube so that it may be drawn back again into position.

No. 8,553. H. Taughe's "Improvements in tires for velocipedes and other wheels. May 5, 1891.—The object of this invention is to produce a tire to replace "the so-called pneumatic tire." For this purpose the rim is made of crescent section, having the edges (a a) bent so as to present non cutting surfaces. The rim is surrounded with a band of elastic material (A) which forms the chord of an arc across the section of the rim. This band is covered by a second band of rubber (B) which forms the tire and is made with an internal projection (C) which touches or bears upon the middle of the inner band (A). In some cases a tube may be substituted for the projection (C). By the pressure of the wheel upon the road the projection (C) is pushed against the band (A) whereby a spring movement is given which it is asserted is similar to that of a pneumatic tire. The ends or edges of the bands (A and B) embrace the back of the rim up to the proximity of the line of the spokes. These bands are then covered or partially covered with another band of fabric or other material (D) strongly cemented in such manner that the whole is very firmly held together.

No. 17,274. Roger, Baron of Maun's "Improvements in tires for wheels." Sept. 28, 1892.—This tire may be fitted to any wheels provided with the usual grooved rim. The edges of the rim are polished and greased with tallow or some other substance, presumably to present their cutting. A strip of sheet India rubber with a hem on both sides fitted with cloth bands is fixed longitudinally around the rim, the bands protecting the rubber against the rim and leaving only the middle of the strip elastic. The strip is stitched or laced around the rim so that the centre is strongly and equally tended on the groove. The tire may be either hollow or solid and should be rather less in sectional diameter than the groove as it must, when pressed upon freely, enter the groove till it forces the strip against the bottom, the whole resistance to pressure being furnished by the elastic strength of the strip and not by the narrowness of the groove. The strength of the strip is regulated so that it is normally drawn near to the bottom of the rim by the rider's weight but without touching it except when jolting it heavily. An outer cover of rubber is used to prevent the tires slipping away or the introduction of dust, etc., it is not greatly stretched and the tread is protected against wear. The edges of this outer cover are sewn together at the back of the rim.

Agents Seem To Be Scarce.

Chicago is a large city and cycle trade centre, yet traveling men find it difficult

The firm has in its possession, however, another gear, without chains or bevel wheels, which it is sure will prove a splendid thing. I hope to be in possession of particulars in a week or two. The 1893 Referee rear driver will be recognized at a glance by its conspicuous improvements in the vicinity of the crank bracket. The firm is busy, and satisfied with the show just past. When I called I was shown a fine-looking tandem safety in course of completion to order, the front seat and frame being designed to carry a fair rider.

A NEW PLATING PROCESS.

The London Metallurgical Company yesterday held a private view of its hard silver plating by the Arcas process. I was invited and after having prepared my mind with a glass or two of the Irroy and Bollinger brands, comprised in the refreshments provided, I examined numerous specimens of splendid plating and went over the works. The new board of directors includes Mr. Lambert, of the Humber Cycle Company, which will insure the Arcas plating being adopted by the great wheel firm. Its extra cost over nickel is paltry. Its merits and superiority I have proved by testing it on my cranks for a season. As I have explained the peculiarities of the Arcas plating in a previous letter I will merely mention now the firm's address, which is 80 Turnmill street, London, E. C.

THE MUSTANG TRIUMPH.

The Triumph Cycle Company, whose geared ordinary created such a good impression last spring, will show at the palace their Mustang Triumph, f. d. safety, certainly a very smart mount, and which should find favor with the speed division.

Although a small thing, Wright's pneumatic pump clips deserve mention. By their aid a long pump may be carried on the handlebar, or along the top tube of a safety, and instantly detached and replaced after use. They only cost twenty-four cents a pair, plated, and are supplied wholesale by the Dorman Engineering Company, Northampton.

I have a number of other good things in my note book, which I must reserve for my next letter, as my space is already exhausted. STANLEY.

A BROKEN CONTRACT STORY.

How Mr. Lucas Got His Draft on the Eve of His Departure for Home.

While in Boston, recently, a REFEREE correspondent, while riding on an electric car with a prominent manufacturer, was told a story of a broken contract and consequent woe to Mr. Lucas of Lucas & Son, Birmingham, Eng., the well and favorably-known lamp firm. The story went that Lucas had, while west, contrary to the wording of his contract with the Premier Cycle Company of New York, secured a large lamp order from the McIntosh-Huntington Company of Cleveland. Then a bird had whispered the fact to L. H. Johnson, president of the Premier company, who had a thousand-pound Bank of England draft in his safe for safe keeping for the genial Lucas of Birmingham, who had heard of the tricks of bunco men and Yankee sharpers generally. When the good man returned to New York (so the story goes) he took a surface special limited horse car and presented himself to the Premier office and asked for his "rocks," an application that was met with by the suave reply, by President Johnson, that he wanted to consult his attorney before giving up that high-class piece of English paper. The Birmingham man perspired freely, it is said, on learning this, and he hid himself down

1893 CATALOGUES NOW READY.

to select suitable trade representatives from the raft of agency applications received. Along cycle row most of the stores are retail branches of large English and American manufacturers and as such are not capable of pushing another line and doing it justice. General dealers are all "fixed" thus early and the representatives are afraid to tie up their wheels where full justice cannot be done them. This is driving many to open retail stores and distributing agencies, better for them and for the local trade in general. It is rumored that the Stover company will open a retail store, having taken the agency from Thomas Kane & Co. It is known that Michael Greenebaum's Sons will open a store and it is said Demorest & Co. will also open a distributing point here. Agencies for two score wheels have been offered here, and there are representatives of twice as many more yet to come. Who will handle all these machines? Not the present dealers. It would seem then that an excellent field is open for several firms of capable men. Mr. Clementi, formerly of Sieg & Clementi, has secured several lines. He has not decided where or how he will locate. It is not in these days strictly necessary to open a store on the street, where a prominent and well known wheel, one that is well advertised, is handled. Buyers will go up stairs—that is, critical buyers, and most of them are—for they must see all wheels before buying. A shining example of this is James Bridger, who does a splendid retail business on the third floor and out of cycle row. Many of the local manufacturers will sell at retail from the factory, and beyond an exhibit at the World's Fair, and small agents in the outskirts, have no retail store next season and no local agents.

#### Thiele's New Machine.

Jonh H. Thiele, for many years well-known as foreman of the repair department of the Pope Manufacturing Company in Chicago, now proprietor of the Lincoln Bicycle Exchange on North Clark street, is the designer and manufacturer of a machine to be known as the John H. Thiele Special. It is hardly necessary to add that this will be an excellently made wheel, John's reputation for first class work guaranteeing that. He has already received orders for fifty. It will be made of drop forged parts and the very best English weldless steel tubing, of a special design, the rear portion of the frame being much higher than the front. Mr. Thiele argues that in this way the strain is equalized between the front and rear wheels. The Special will weigh thirty-two pounds and a ladies' wheel, an exact copy of the Columbia, thirty-five pounds. The gentlemen's wheel will have an 28-inch head, 44-inch wheel base, either 30 or 28-inch wheels or both 30 and 28. Parts will be forged; wheels, tangent-spoked; chain, block; tread narrow and pedals raised eight inches from the floor with the 28-inch wheel; special saddles of the well-known Thiele pattern. Both machines will list at \$150. Any tire will be fitted and frames will be built to order.

#### New Styles of Roulettes.

The Roulette, made by the Roulette Cycle Company, Coventry, will be handled in this country by McLean, New York. At the recent Stanley show the company had a display of nearly twenty machines. In addition to its well known patterns it introduced one or two new designs, notably the model E, a full roadster. It was fitted with the new Dunlop tire and has the frame tubes carried high, with a tubular L saddle pillar. Barton & Loudon's chain cover, with dust proof barrel bracket

and dust proof ball head, is used. The second new design is model F, a ladies' safety. It has the handles brought forward and good leather dress guards for wheel and chain. Model E is a racer, weighing twenty-four pounds.

#### A Neat Trade Mark.

The Henry Sears Company, 110 Wabash avenue, has just been granted a patent for its new wheel, the Phantom. The Sears company is pushing the Phantom, which is a strictly high-grade wheel of neat design. The same concern also handles the Lyndhurst. The

company will do a large jobbing trade and will make a strong bid for a portion of Chicago's retail business.

#### General Agent Merrill Now.

C. S. Merrill, general agent for the Columbia Bicycle Company, was in Chicago last week. This company was lately formed with a large capital stock, and expects to turn out 3,000 or more machines this season of the two grades, the Columbus light roadster, weighing 29 1-2 pounds, and listing at \$150, and the second listing at \$100. The Columbus will be composed of drop forgings and Mannesmann spiral tubing; the wheel will be 28-inch, wheel base 45 inches, head 9 1-2 inches, and fitted with hinged handle-bars, adjustable, and either straight or drop. This adjustment is so strong that the front wheel may be lifted over a ten-inch curb without slipping. The cheaper grade will have 30-inch wheels, drop forgings and Credenda tubing, the design being the same as the Columbus. These wheels will be exhibited at the Philadelphia show. L. Fink is president, A. J. Kessler, vice-president, and F. B. Chaplin, secretary and treasurer of the Columbus Bicycle Company.

#### Whiting's Aluminum Handles.

Dr. T. H. Whiting, McVicker's Theatre building, Chicago, has brought out an aluminum handle, a cut of which is shown here. The handle does not enclose the bar, but is secured and ce-

mented to it near the end, thus doing away with some three or four inches of each end of the bar, or, as the inventor figures it, a saving of 308 complete bars in a thousand.

#### Sold Many Wheels.

Herbert Hadden, of Bayliss & Thomas, Coventry, cried "Excelsior" as he hopped aboard an England-bound steamer, having spent nearly three months in a profitable manner in the land of the eagle. Mr. Hadden wished the REFEREE to say that he bears no hard feelings against any other English drummer of cycles and trusts they each sold 4,000 wheels. Mr. Hadden is a pusher—a hustler (with apologies to Harry Swindley) second to none.

#### Bought G. and J.'s Interest.

A. W. Gump, manager and general partner of the firm of A. W. Gump & Co., Dayton, O., one of the pioneer bicycle houses in America, has purchased Gormully & Jeffery's interest in the firm. He will continue the business under the firm name of A. W. Gump &

Co., and will push the Rambler in a large territory in Ohio. The firm controls several states on the Eagle, is wholesale dealer for Western Wheel Works goods west of Pennsylvania and will also handle most of the leading American cycles.

#### Peculiar Handle Bars.

The cut herewith shows the new racer of the Marble Cycle Company, with its peculiar handle bars. It has been said that this kind of bar does not allow good steering, having been tried in England;

but Barrett says he has tried the machine and that it steers even better than a machine fitted with the ordinary bars, while a much better position is obtained.

#### Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

488,392, pneumatic tire; Walter B. Hardy, Boston, Mass.; assignor to the Revere Rubber Company, same place. Filed July 28, 1892. Serial No. 441,478.

488,395, cycle stand; William M. Justice, Pittsburg, Pa.; filed April 18, 1892; serial No. 429,534.

488,464, stand for bicycles. Herman C. Wiedemann, Philadelphia, Pa. Filed March 21, 1892. Serial No. 425,753.

488,494, pneumatic tire for vehicles; Alexander T. Brown and George F. Stillman, Syracuse, N. Y.; filed June 20, 1891; serial No. 396,988.

Trade Mark.—22,223, safety bicycle; the Henry Sears Company, Chicago; filed Nov. 28, 1893; essential feature the word "Phantom."

#### Get Good Position On It.

Warman & Hazelwood have at their store in Chicago a Coventry Cross geared ordinary. The front wheel is but 34 inches and rear 24. The position is exactly that assumed on the good old ordinary of long ago, and the rider can easily touch his feet to the ground. The machine, all on, weighs but 35 pounds. The position the rider obtains on the machine is a splendid feature.

#### Allen's Digest of Patents.

James T. Allen, the examiner of patents of the United States patent office, Washington, called at the REFEREE's eastern office last week and left one of his exhaustive digests of patents, which covers everything in wheels and pertaining to cycling for 103 years. The work is bound nicely and the plates are accurate. It is sold for \$50, while the subscription price for the monthly, which reports and illustrates all patent inventions appertaining to bicycles is \$5 per year.

#### The Credenda Tube Company.

The Credenda Tube Company, of Birmingham, is so well known in this country that little need be said in its favor. The company makes the best tubing in England, and it is used by some of the oldest and largest bicycle manufacturers abroad. At the Stanley show the company made a display in a variety of gauges, up to as fine as No. 28, and showed several new sections in tubing from square to round. The Credenda company enjoys a large trade in this country, which is steadily increasing.

#### The Chautauqua Company's Product.

The Chautauqua Cycle Company of Jamestown, N. Y., whose factory is at Falconer, is at work on 500 high grade wheels, to be made in three styles and weights—light roadster, 36 pounds; road racer, 30 pounds; racer, 24 pounds.

The wheels have 39-inch front and 28-inch rear wheels, 44-inch wheel base, 11-inch head, and have dust-proof bearings throughout. The company will also make 200 or 300 sulkies.

#### Medals for Record Breakers.

The New Howe Machine Company gives to record breakers on its wheel a heavy gold watch chain. This is of fifteen karat gold, a quarter of an inch thick, three-quarters in width and one and a quarter inches long. It costs in England about £8 (\$40) and would be an ornament to anyone's watch chain. Mr. Golder, now in Chicago, proudly displays one of these medals.

#### New Howe Novelties.

The New Howe Gordinary has a duplex backbone which prevents the swaying of the rear wheel, pronounced by riders very disagreeable. The New Howe company also shows a patent scored seat post, enabling the rider to adjust his seat post to the exact position suitable for his reach.

#### Working Twenty-Four Hours Now.

Morgan & Wright are now running their tire factory twenty-four hours a day and turning out double quantity of tires. The late fire is already a thing of the past. Monday the office was located on the first floor of the new building. It is one of the finest offices in the city and commensurate with the immense business done by this firm.

#### Business in the South Looks Bright.

J. J. Ross returned last week from a three months' trip in the south in the interest of Ames & Frost. He stated that there was an opening for a large business in the spring and that he should again cover the field in March. He was as far south as Key West, Fla., and stated that it was hard to sell goods at present, but that interest in the pastime was increasing. Ross left for Wisconsin on Friday for a long trip. One week ago he was picking lilacs and rosebuds on a road leading out of Savannah and a week later was skating in Wisconsin.

#### The Judges Will Now Take Hold.

Competition for the Morgan & Wright prizes for "hard pounded" road riders of their tires closed last Sunday, and the committee, Messrs. Van Sicklen, Root and Berger, will shortly enter into a canvass of the applications to determine upon the lucky men. The winners will be announced in a few weeks.

#### Been Through the Mill.

Robert B. Abbott, now with the Hill Cycle Company, has had six years of active service in the cycle business in as many departments, as manager of a large house, secretary-treasurer of a company, indoor salesman, traveling salesman, bookkeeper, correspondent and manager of a sundry department. His varied experience and untiring energy will land him well up in local trade circles before many seasons have passed away.

#### A Specialty of Frames.

H. F. Vale & Co., Birmingham, Eng., write that they are in a position to build frames on order. The firm has an excellent reputation in this line, having filled orders for some of the largest dealers in England. Frame making is a specialty of this house. The work is second to none, and cash buyers will get the lowest possible prices.

#### Big Tire Deal.

Stillman G. Whittaker, manager of the Revere Rubber Company's tire department, called at our New York office last week with a large package, which,

# RAGLAN CYCLES

.....ARE REPRESENTED BY.....

HARBER BROS. COMPANY,  
Bloomington, Ill.

IN CHICAGO AND WESTERN STATES.

FREDERICK W. JANSSEN & CO.,  
310 Broadway,  
NEW YORK CITY.

C. F. BOSTWICK,  
24 Front Street,  
TORONTO, ONT.

IN CANADA.

And Manufactured of the Best of Everything by

TAYLOR, COOPER & BEDNELL, LTD  
Raglan Works, - - - COVENTRY, ENGLAND.  
LONDON, 33 HOLBORN VIADUCT, E. C.

he said, contained United States negotiable paper, and which he also said he was willing to deposit, wager and gamble against a package of equal value, that his firm had secured the largest order for pneumatic tires that will be given in America this year. It was from the George R. Bidwell Cycle Company. This, he said, is made public with the company's consent.

#### Imports the Cataract.

C. H. Schub, South Bend, Ind., is a dealer of considerable note and is now

importing the Cataract, one of the best known of English wheels.

#### Some Agents Named.

Rolle, Weigle & Co., 128 Whitehall street, Atlanta, Ga., have been appointed state agents for New Howes by Mr. Golder.

L. C. Crondal, superintendent of agencies for Howard A. Smith & Co., has placed the following agencies for

Excelsiors: Buffalo, W. G. Schack; Rochester, C. L. Connolly; Syracuse, Reuben Woods' Sons; Oneida, Stone & Lonnberry; Rome, C. G. Miller.

C. G. Field, for the Sterling Cycle Works, has placed the following: E. C. Meacham Arms Company, for St. Louis; Avery Planter Company, Kansas City, state of Kansas; Inter State Bicycle Company for Kansas City; Rector & Wilhelmly Company, Omaha; A. C. Abbott & Son, Marshalltown, Ia., state of Iowa.

#### The Whitworth Man Coming.

C. Vernon Pugh, the general manager of the Whitworth Works Cycle Company, expects to pay us another visit next month, when we may hear of the company making some important moves in America. Those who had the opportunity of meeting the capable young Birmingham man will be glad to welcome him here again. Mr. Pugh is one of the quiet, unassuming sort of people whom Americans, with all their love for display, like to meet. Perhaps we will hear something definite about Osmond's intention when Mr. Pugh arrives.

#### Mr. Paul Is Pleased.

P. C. Paul, president of the Ariel Cycle Company, was in Chicago last week. He is more than pleased with the hearty reception accorded the Ariel in all parts of this country where it has been shown. This company will fully double its capacity this season, make a lighter wheel and a few racing machines, and merit the admiration of all lovers of excellent workmanship. M. A. Meader, secretary of the company, is now on a trip through the west, while Tom Roe is doing the east.

#### Will Give Away Pumps.

The James Cycle Company has placed a large order for large pneumatic pumps

with Codman, Shurtliff & Co., of Boston, and will give one of these pumps to every retail purchaser of their machines this coming season. The Hill Cycle Company, it is said, will also follow out the above plan. These two firms, by setting the example, may cause others to do likewise, in which case the firm of Codman, Shurtliff & Co. will reap a harvest, and buyers will be accordingly benefitted, both by receiving something for nothing, and by obtaining a much-needed article.

#### Plans Have Been Adopted.

L. W. Conkling received a cablegram last week stating that the plans for the Coventry Machinists' Company's American factory at Richmond, Ind., as designed by E. M. Newman, were accepted, and work will go forward at once. This is designed to be one of the most complete factories for the construction of bicycles in America. In its arrangement it is so laid out that the raw material will be unloaded direct from the cars into one door, pass through the four long buildings arranged around an open square and emerge at a door farther on, completed bicycles ready and for shipment.

#### Says the Outlook is Good.

C. S. Gallagher, representing Tower & Lyon, was in Chicago last week. His line included wrenches, oilers and locks, and he stated he had already taken orders for as many goods as his firm sold in this part of the country last season, and that in Chicago alone. All dealers and manufacturers seen were prospering and preparing for an enormous increase in business in '98.

#### Many Out of Employment.

One cycle firm has received on an average five letters a day for several weeks from cyclists desiring positions. He

wants only one of them, and being new in the cycle trade is at a loss to select the right one from among the lot. Another cycle dealer, who knows a bit, wants a man and has refused a score or more of prominent cyclists. He will have none of the so-called push, stating that he wants a worker and a man who will devote his time to the business.

#### Another New Wheel.

Mr. Prudden, of the Michigan Wheel Company, was in the city last week for several days. His concern makes hickory sulky wheels and attachments, this being a larger share of the trade with them. Shortly the manufacture of cycles will be entered into, the specifications of the wheel not being ready as yet. The factory is a large one and very complete. The machines will be the highest possible grade.

#### Humber Cycle Company Sold.

Late last week the Humber Cycle Company, 285 Wabash avenue, disposed of all its stock and business to Montgomery Ward & Co., who have practically controlled the business for some time. Horace Bell remains in charge, and no change in the business has been announced to take place.

#### Chicago Trade in Brief.

E. H. Miller, agent for Ariel cycles at Cincinnati, was a visitor to cycle row last week.

A. E. Flavell of Loyd, Reed & Co., manufacturers of the Overstone, is expected in Chicago this week.

The Sieg company will add space to its sales room by fixing up the basement where second-hand and job wheels will be placed.

Otto Merpall, formerly manager of the Marble Cycle Company's Chicago house,

which position he resigned, is looking for an opening.

H. E. Laurie, the well-known Englishman, and T. F. Rockwell, now on the road for Warman & Hazelwood, are expected in Chicago next week.

A. W. Moore, western representative of William Read & Sons, Boston, and United States agent for Belsize wheels, left for an extended trip through the west last week.

The Chicago branch of the Pope Manufacturing Company has received its samples of the '93 line, models 30 and 32. These are generally admired. Both are fitted with elliptical sprocket wheels.

W. E. Newton, of the Imperial Bicycle Company, Portland, Ore., who was in the city last week, reports a good trade during the past season. For next year the business on the coast will be much larger.

Mr. Dorr, manager of the cycle department of Thomas Kane & Co. has gained popularity rapidly since entering the cycle business, with which line he was but slightly acquainted until late last season. Mr. Dorr is a thorough mechanic.

Small Trade Notes.

C. Vernon Pugh, of the Whitworth company, will arrive in this country next week.

Flint capitalists are offering considerable inducements to secure the Harriett Cycle Company of Detroit.

The Raleigh company was the first concern to engage space in the English section at the world's fair.

Arthur E. Flavell, representing Loyd, Read & Co., the makers of the Overstone, will arrange an exhibit at stand 116.

It is said another large English concern seeks to open a factory in America this season, to manufacture goods for '93 delivery.

The Union company writes that its shops are in operation sixteen out of every twenty-four hours, in order to fill orders for the P. D. Q.

L. J. Righter, late of the Lincoln (Neb.) Cycle Company, has taken hold in his new position as manager of the Schwalbach Cycle Company's Williamsburgh branch.

Bergfel's saddle, which is made in Newark, is having a nice run. Mr. Bergfel is now experimenting with two or three other ideas, one of which is a sprocket wheel brake.

The Coventry Machinists' Company will carry a line of geared ordinaries and front driver safeties this season. The latter will have 33-inch front wheel and 24 back, and is very handsome.

A few of the agencies established for Fowler safeties by E. C. Bode are as follows: T. B. Rayl & Co., Detroit; George Worthington Company, Cleveland; George F. Lutz & Son, Buffalo.

L. J. Ollier, formerly of St. Louis, who has filled positions in Chicago with the Spooner-Peterson Company and Ames & Frost, expects to enter the employ of the Nebraska Cycle Company at Lincoln next month.

James Bridger has placed the agency for his three lines, the James, B. & A. and South Road, for Dayton, Ohio, and vicinity, with the Keenan, McGee & Finke Cycle Company, which will handle these wheels exclusively.

The Du Cros brothers, Alfred, George and Harvey, Jr., were visited in their new office, Mohawk building, 160 Fifth avenue, New York, by our eastern representative last week, who learned that the famous Dublin boys will soon be ready to handle the large volume of bus-

iness that has commenced to flow in for '93. In future New York will be the distributing point for the famous Dunlop. The latter people have gobbled up the Airtite company—for a consideration.

The Raleigh Cycle Company, Ltd., which recently installed one of the Zucker & Levett Chemical Company's complete nickel-plating outfits in its new factory, is well supplied with the best machinery and apparatus for turning out first-class work.

J. Whyard, of Jersey City Heights, N. J., will build one hundred wheels on Humber lines next year, which will be called the Highholder, to weigh 80 pounds, all on. A. W. Wood, of Thirty-first street and Eighth avenue, New York, will market the wheels.

The Red Star Manufacturing Company, 58 Front street, New York, is much pleased at the splendid reception given its Red Star solid illuminant for bicycle lamps, which is a clean and economical compound that melts while burning. This firm also sells Red Star chain grease.

The Binghampton Oil Refining Company of 14-16 Desbrosses' street, New York, is about to place a first-class illuminating and lubricating oil for cyclists on the market, and will cater to the jobbing and wholesale trade exclusively. B. D. Butler is representing the company, of which Mr. Morgan is general manager.

There is a lively war going on between Frank Bowden of the Raleigh company and Mr. Pugh of the Whitworth Cycle Works Company over advertising claims. The two English managers are alive to the value of claims and advertising, although possibly Bowden is better served with age. It will be interesting to note the two leading exponents of speed and light weights in England.

The Colorado Wheelmen recently joined the Ramblers in a body, which was the starter for the enormous growth the latter organization has enjoyed. From between fifty and sixty the membership has in five weeks jumped to 219, with fifty-eight applications waiting to be acted upon. New club house the cause. The Denver Wheel Club has also increased and now numbers within two or three of 100 members.

## WERE THEY "FULL?"

Relative to the New Year's day races at Milwaukee, the *Inter Ocean*, in a special dispatch, said:

There is no danger, however, that the foolishness of some of the crack riders who come here to participate in the races may make the sport unpopular and unprofitable for those who try to promote interest. Two of the fast riders who appeared yesterday had been drinking so heavily the night before that they were unable to make time creditable to themselves. Their condition and the unsatisfactory work which followed have made the Milwaukee wheelmen feel rather sore.

The REFEREE has not been given the names of those who were "full," if such was the case. Inasmuch as the "cracks" were from Chicago, it is reasonable to suppose those who were "full" were from the World's Fair city. At any rate, it is a disgrace to the city and the cause of cycling. Respectable men who went to Milwaukee will, of course, be suspected; but men are known by the company they keep. It is the case of "the push" again—the more one associates with "the push" the sooner will his reputation fade. It is to be wondered that such occurrences are not more frequent. There is too much liberality on the part of race meet promoters.

## THE PHILADELPHIA SHOW.

Wonderful, indeed has been the progress of the cycle trade during the past few years, and in no way can the fact be better exemplified than by viewing the exhibit of cycles and accessories gathered at this moment in the Fifth Street Market Hall, Philadelphia. It is a scene to make glad the hearts of many who were fortunate enough and far-seeing enough to enter into the business years ago, and who, by means of good management and the production of good goods—perhaps the terms are synonymous,—have attained positions among the foremost business men. Nor, by the appearance of things, do these people mean to neglect the opportunity here afforded them.

It is not long ago since the first Philadelphia show occurred—less than two years, in fact, and yet the exhibits then and now cannot be compared. The first show occurred at Horticultural Hall Feb. 30, 1891, affording space for only two dozen exhibitors, the overflow being forced into a room below stairs, where their show was of no use to them. Larger quarters were provided for '92, and still the building—Industrial Hall—was crowded, both as to available room

for exhibitors and spectators. This time the building is ample in size, though not possessing the excellent surroundings which marked the *locales* of the previous shows. The building was originally a market house, but what it lacks in architectural beauty has been made amends for by the committee in the way of decorations.

The Philadelphia show bids fair to rival, and even excel, in the course of time, the famous Stanley, held annually in England for fifteen years. The first attempt, of course, assumed no great importance, but last year many agents came from all parts and a considerable amount of business was transacted. Encouraged by the success of the Philadelphia, people in other cities promoted exhibits, but they were not successful, and happily there seems to be no likelihood of their being repeated. Through the REFEREE, trade men expressed themselves in favor of Philadelphia or Chicago. This year the management of the show has gone into the project on a much broader scale than heretofore, and has ventured a large amount of money in the enterprise. They have advertised extensively and made every effort to reach every possible exhibitor.

## IS THIS JUSTICE?

The racing board of the League of American Wheelmen is a slow moving body, but sometimes when it does become aroused from its state of lethargy and passes upon this, that or the other matter, its act seems to have as much tenacity as the octopus. It has not been forgotten that the racing board, at its meeting in Chicago, Oct. 22, suspended Julian P. Bliss "for having competed in a class race to which he was not eligible," or "falsifying his entry," the charge being made that he had ridden a half-mile somewhere in much faster time than would permit him to ride in the class race in which he is alleged to have competed. He was laid on the shelf for sixty long days, was deprived of his rights as an amateur, was not permitted to race at Nashville or Milwaukee—the latter place on Thanksgiving day—where he could surely have won several handsome prizes—and he has been looked upon as a semi-professional by his many friends. To make matters worse the chairman of the racing board refused to answer Bliss' letters asking what particular race it was he entered to which he was not eligible. He received no answer, he could not defend himself; in fact, he could not learn the direct charges in order to defend himself.

The REFEREE, at the time of the suspension, championed his cause and said that even the Baltimore officials could not show any grounds for the charges. We hunted over the results of all the races in which the Chicago man had been and could find nothing to bar him from any class race in which he actually rode. The handicapper of the district in which Baltimore is located, wrote the official handicapper of the Chicago district for Bliss' record, and a reply was sent back to the effect that Bliss was eligible to the class race over which the trouble arose. This was *before* the suspension—and Handicapper Goodman sent the same word *after* Bliss had ridden at Springfield, Mass., and Columbus Ohio.

Notwithstanding all this information, the racing board saw fit to suspend him for sixty days, ignored his requests for charges, and the Baltimore race officials withheld his prizes. It now turns out that the racing board could not substantiate the charges made against Bliss—if any were made—and he has been written to by the chairman—*since his suspension was raised, mind*—to the effect that the

board could not back up its charges and he is therefore exonerated.

But Bliss has not received, and probably never will, the prizes fairly won and so admitted by the board under whose sanction the races were held. How unfair it would be for a judge to send a man to jail for sixty days, deprive him of his liberty and the right of franchise, *without a chance to even say he was innocent*, and when liberated tell him he was never guilty! This may be justice, but it is a new kind. The racing board has made a bad mess of the affair, has been unjust in the extreme, and the best it can do is to see that Bliss receives the prizes withheld or others to take their place. Deal out justice next time, gentlemen of the racing board.

If memory serves us right this paper was taken to task by the *Chicago Tribune* for being behind the times. At that time we pointed out a case wherein the REFEREE published a letter, addressed and mailed to the big daily, two days before it appeared in that paper. That same great blanket sheet wound up the departing year in a becoming style by publishing, as a dispatch from Boston and as real news, the contemplated scheme to build an asphalt track or road from Chicago to New York. Why, dear *Tribune*, that item was published in all the American cycling papers at least two months ago, and in the English cycling press a full month hence. Talk about being hebdomadal—better try once more, Mr. *Tribune*.

AN Ohio farmer is said to have written to a local paper on the subject of good roads, and suggested that as good roads are being agitated for the benefit of bicycles more than for other vehicles, an annual tax of \$2 or \$3 be levied on all wheels to create a fund for the purpose of helping the reform along. He would place wheels and dogs in the same taxation category. To tell the truth we hardly know how to express our contempt for such a man. It does not seem possible that such mossbacks could live in the good state of Ohio. Oh, *Good Roads*, where art thou?

THE REFEREE desires to thank its contemporaries and many friends in the cycling world for the flattering testimonials on its Christmas issue. They are, indeed, appreciated, but we believe our readers prefer matter other than that pertaining to this publication and for that reason refrain from publishing the compliments bestowed upon it.

"A BICYCLE club composed mostly of pneumatic tires and the latest improvements, came over from Lee's Summit and Pleasant Hill on Sunday," is the way a Missouri paper puts it. Must have been a windy sort of an affair, to say the least.

## CURRENT COMMENT.

For the first time in several years the weather clerk is doing his duty in the matter of winter weather. Let us all pray that he keep it up. Cold weather and plenty of it will go a long way toward making 1893 a successful year from a bicycle standpoint. Warm winters and cold, wet springs have been our lot for so long that a comfortable change from cold winters to warm springs will be hailed with rejoicing. Cold weather has a tendency to keep people indoor; snow is not so pleasant to the eye as green grass, and if Boreas will only cover the green with the white for two or three months, the youth of the land will be mighty anxious to get out when the green again asserts itself.

In no way can the spring be better enjoyed than, when mounted on a bicycle, one spins through highway and byway. The smell of new grass and the sight of daisy and dandelion is more appreciated from the perch than from the ground. Many, many people know this, and when the soft and hazy sunshine of a warm spring day calls one out of himself, he becomes very generous and will spare no expense or time when the object is a journey from city smoke into clover and pure country air. Then it is that the cycle dealer reaps his harvest. Therefore it is that we long for a warm and dry springtime. Cold weather may or may not have a destroying effect on cholera germs. Let us hope that it has, for should the Asiatic scourge get a good hold on our overcrowded cities, the effect on business of all descriptions will be deplorable, and the cycle industry will suffer even worse than most others, because to a great degree it is still a sport. Therefore, again let us thank the weather clerk for the good in a certain way, and for the negative good that we hope the cold weather will accomplish.

\*\*\*

The national cycle show which opened in Philadelphia this week will have an effect on the trade which will be wide spreading in its results. It is one of the sign of the times that such an exhibition can be successfully run for two seasons, especially when the expense to makers for an exhibit is so great. In re this matter, I hear some grumbling—not without cause, it seems to me—why such an exorbitant price should be asked for space and then an entrance fee be charged lookers on is a question of some moment. That there is a growing necessity for a national show there is no doubt, but that such a show should be run for private or corporation interest is very questionable, and I, for one, hope to see the makers and dealers get together and arrange for a show of their own hereafter. Personally, I think there should be two shows—one in the east and one in the west—and the expense of the two, if properly managed, should not be greater than the one under the present system. If such a plan could be maintained as would conduct these two exhibitions, say a week apart, so that an exhibitor in the east could move his machines to the western show without loss of time, and that the affair at both ends might be planned and conducted by a makers' and dealers' association after the manner of the stove makers' association; then if the grade, price and discount could be controlled by such an association, buyers could come to the show and place their orders with absolute certainty of getting just what they wanted, and much expense could be saved both buyer and seller. I sincerely hope that such an arrangement may be reached, for the trade needs and demands it.

I have a premonition that an association for mutual protection will be formulated during the national cycle show. In fact I know of steps that have been taken toward such an organization. To be sure, the scheme has been tried before without success, but the time was not so auspicious as now. It is high time that the petty trade jealousies were put away and that the season for cutting each other's throats should be relegated to the shelf, upon which already is placed the ball bearing and saddle patent warfare, the good old ordinary, the A. A. U. and the six day race. Bicycle building and bicycle selling has finally settled down into a regular business, weak at its outposts, to be sure, but more secured in general than ever before. Now let those most interested form shoulder to shoulder for their own protection and interests, and the business will at last see a season of prosperity.

LA COTE MAL TALE.

THE REFEREE'S VOTE.

RESULT OF THE REFEREE'S INQUIRIES TO DATE.

A Majority Do Not Want Amateurs and Professionals Mixed—Cash Prizes Voted Down — Publish the Addresses.

The result of the REFEREE's mail vote on the amateur question will doubtless bring gladness to the hearts of the pure amateurs, for a majority of those who have sent in their replies seem to be decidedly in favor of maintaining amateurism. Each day for the past week some 200 circulars (like the one printed on this page) have been sent out to local consuls promiscuously throughout the United States. Each circular contained a return postal card, so that the answers might be sent to this office promptly. In addition to this a voting blank was printed in the papers and others were sent to league members in the same manner as were the circulars and postals. It was deemed advisable to keep the vote separate, so as to guard against use of the blanks by factions. At the time of going to press it was too early to expect a very heavy vote, but the fifty-one votes by card and the four by blank will give a good idea of the drift of things.

It is quite evident, judging by the vote herewith, that good league members do not like to see promateurs and amateurs mixed, nor do they care to have cash prizes for any but professionals. It seems to be about evenly divided as to the value of prizes to be given. By a small majority cash prizes are tabooed. But the voters are unanimous and most of them emphatic in their demand for having the names and address of applicants for membership to the league published in the Bulletin. One man said "not necessarily" in answer to the question, and his vote is placed in the "optional" column. Some were very strong in their demands on this question, and there was a frequency of underscoring. By a majority of seven, professionals are thought fit to become league members. Those who have not voted should read the circular herewith, cut out the blank on the next page and send it to the REFEREE office at once. The voting blank will be found on another page.

Two New Clubs.

A new club has been organized in Long Island City, called the Long Island City Cycle Club. The following officers have been chosen: President, E. F. Mackee; vice president, H. H. Jones; secretary, J. G. Horsfeld; treasurer, P. J. Inghs; captain T. F. Jones; lieutenants, G. Boettiger and H. Poppenburg. The Inter Ocean Wheel Club was formed at Sioux City, Ia., Monday, with fourteen members, and with A. A. Her-ring as president: W. J. Ashley, vice president; Thomas Rae, secretary and treasurer; G. F. Sparks, captain. It is the intention to make it a league club. Another club house will be added to the city in the near future.

The Kentucky Division Board.

The annual meeting of the executive board of the Kentucky division was held at Louisville Wednesday last. W. W. Watts, chief consul; C. O. Updike, vice-consul; Orville W. Lawson, secretary-treasurer, and others being present. Messrs. Johnson and Watts were selected as delegates to the national assembly.

RESULT OF THE VOTE:

|                                                                                                                                                   |                  |                          |                |                     |                  |                  |
|---------------------------------------------------------------------------------------------------------------------------------------------------|------------------|--------------------------|----------------|---------------------|------------------|------------------|

Editor..

R. M. JAFFRAY,  
Business Manager.

THE LEADING CYCLING JOURNAL.

PUBLISHED WEEKLY BY THE REFEREE PUBLISHING CO.

PRINCIPAL OFFICE, "CAXTON" BUILDING  
328-334 Dearborn Street.

Chicago, \_\_\_\_\_ 189\_\_

Dear Sir:

For several seasons a number of important questions have been before L. A. W. members for discussion. Some of them will probably be decided at a convention to be held at Philadelphia on February 20, 1893. For the purpose of ascertaining the views of the membership at large, we request you to answer the questions on the enclosed postal card and return to us.

Should you feel disposed to express your views at greater length than the postal card will permit, we shall be glad to receive a further communication from you for publication.

Yours truly, REFEREE PUB. CO.  
AN EXPLANATION.

For the guidance of those not thoroughly familiar with the questions involved we give the following information concerning them:

No. 1. Shall men whose expenses are paid by makers and clubs be allowed to compete as amateurs? Heretofore men whose expenses while in training and while attending race meets have been paid by their clubs, have been allowed to compete as amateurs. It is generally supposed, also, that many riders' expenses are paid by manufacturers.

No. 2. Shall amateurs be allowed to compete for such prizes as pianos, teams, lots, etc.? Amateurs have been allowed to accept the prizes named, as well as laundry bills, shaving bills, loads of ice, flour, hams, soda-water tickets, "merchandise to the value of," etc.

No. 3. If not, shall men whose expenses are so paid and who compete for such prizes be placed in a middle class or be classed as professionals? It has been suggested that men whose expenses are so paid, and who compete for such prizes, be placed in a separate class, and called "promateurs," while others consider that they should be declared professionals.

No. 4. Shall professionals, provided they are otherwise acceptable, be admitted to league membership?

No. 5. Shall cash prizes be awarded to any class, and if so, which? Many believe in awarding cash prizes to all; others that articles of jewelry, etc. should be awarded to amateurs and cash to others, all to be under control of the league.

No. 6. Shall the addresses as well as names of applicants for membership be published in the Bulletin? At present only the names of applicants for membership are published, and no alteration, probably, can be made until the present contract with the Wheelman Co. expires. Some claim that the applicants cannot be identified without their addresses, while others are actuated by personal motives only.

No. 7. Shall the constitution be so changed, as to permit of a change by a mail vote? The constitution cannot now be changed except at a meeting called for the purpose, and notices of proposed amendments must be published in the Bulletin 30 days before such meeting.

Among the callers at our New York office were: Arthur Flavel, Loyd, Read & Co., Coventry, Eng.; C. J. Phelps, Phelps & Dingle, Passaic, N. J.; T. T. Roe, Ariel Cycle Company; E. C. Bode, Hill Cycle Company; Fred T. Merrill, Portland, Ore.; Howard A. Smith, Newark, N. J.; Geo. S. Macdonald, Raleigh Cycle Company; Alex. Schwalbach, Gendron Iron Wheel Company; F. F. Weston, Hulbert Bros. & Co., New York; A. Holroyd, Birmingham, Eng.; H. E. Laurie, Warman & Hazlewood; H. E. Ryder, Chicago; W. H. Kirkpatrick, McKee & Harrington; H. C. Wheeler, Premier Cycle Company; C. M. Murphy, Brooklyn; Hoyland Smith, New Bedford, Mass.; W. T. Gibbs, M. D., New York; Louis Crondal, Howard A. Smith & Co.; W. J. Morgan, patent solicitor, New York; D. B. McIlwaine, representative of the South Wales Man-nesman Tube Company; Alfred and Harvey Du Cros, American Dunlop Tire Company; Frank Albert, of piano contest and amateur professional racing fame; W. F. Murphy, Brooklyn; W. Price, "Cupid's Chariot company."

#### Greeting to Papa Zimmerman.

The REFEREE eastern department's manager was the guest of Champion A. A. Zimmerman at Manasquan on Christmas day and night, and begs to return cordial thanks for the kind treatment received at the hands of the members of the champion's family, who wished to seduce the REFEREE man from the path of duty by conspiring together to make him miss all trains and make the visit an all-winter one. To Papa Zimmerman, greeting!

#### Cyclists Narrow Chested.

Dr. T. Gibbs, of New York, who is examining physician to the Fidelity Insurance Company, was a caller at the REFEREE eastern office last week, and was enquiring into the habits of racing men and the general health of cyclists. One of the remarkable statements the doctor made was that the average cyclist had one-third less in chest expansion than other athletes or non-athletes. The REFEREE representative did not exactly agree with the man of physics. Several tests were made (some on himself) by the doctor, who is a rather undersized man, but whose chest development is greater than three cyclists whom he examined and tested. The doctor explained that the lack of chest expansion by cyclists was entirely due to the stooping or leaning, which brings the shoulders forward, and consequently narrows the chest. Dr. Gibbs was emphatic in his denouncement of the stooping position in vogue these days, and thinks that there is "millions in it" for some man who will invent a handle bar that will do away with the stoop.

"Why," said the doctor, "we shall surely have a race of narrow-chested men if cyclists don't brace up." The man of medicine thought he might take a whack at inventing himself, if some other man or woman don't come forward with the panacea for stoops. "Why," continued the doctor, "do cyclists assume such a position? It is decidedly ungraceful, and what benefit is

there in it?" The REFEREE man suggested that they wanted to "get there," or look like crack racers. "Yes, that's it, look like racers," said the M. D. as he made for the street.

#### Physical Perfection and Decay.

While traveling in New England a REFEREE reporter came across the following in a New York paper. It was an editorial, but the editor would not make such a success as a tipster as Colonel Bill Harding, of the New York Daily News—neither does the editor know much about physical perfection high tide in man:

The training work of weeks failed to put Sullivan corporeally into ideal athletic symmetry. It hasn't made the circles representing the measurements of chest and stomach indicate the physical harmony of Grecian sculpture, though the cham-

twenty-two. Sullivan has abused himself, and his gross condition at present is the direct abuse of a at one time magnificent physique. Sullivan to-day, if he had only taken as good care of himself as some people, would be as good (or nearly so) as he was ten years ago. This I judge from watching the ex-champion spar the other evening. At the present time Sullivan's body, from the thighs up, is much too heavy for the legs to support in a long contest—and an abused stomach helped Corbett to whip him. Even if Sullivan was to be 'boiled out' and reduced, his stomach and body generally would not stand a severe strain." Cyclists in Rhodes, Prince and Howell bear out the statement that a man can be a crack athlete at thirty-five or forty.

#### New Men at the Helm.

On Wednesday last the Mercury Cycling Club, of Milwaukee, entertained its friends in a very enjoyable way and elected officers for the coming year as follows: President, Gus Simmerling; vice

east for a short time he will proceed to Chicago.

Jacob Roth, of Roth & Seibert, Erie, Pa., was in New York on business last week. This firm is doing a good business in Western Wheel Works goods and a large repairing and modeling trade. It will also build a few Humber pattern wheels this year.

J. E. Poorman & Co. of Cincinnati placed a large order for Marble cycles with George K. Barrett, obtaining the states of Ohio, West Virginia, Kentucky, Tennessee and southern Indiana as territory. Other agencies throughout the east were placed, but none as large.

The Brandenburg Manufacturing Company, 52 Portland Block, Chicago, manufacturer of the Brandenburg dust proof pedal and self-adjusting bearings, states that its most sanguine hopes for 1893 have been doubled, and it will be necessary to more than triple the output.

Warman & Hazelwood have placed a large contract for Coventry Cross cycles with the Pioneer Implement Company, of Council Bluffs, for the state of Iowa. Mr. Warman has also given the agency for the state of Georgia to the Rolfe-Weighe Cycle Company of Atlanta.

The Monarch Cycle Company has contracts with the following well-known firms: Prince Wells, Louisville, Ky.; Dayton Cycle Company, Dayton, O.; George Hildendegen, Detroit; Speedwell Cycle Company, Baltimore; C. J. Connelly, Rochester; Benjamin Andrews, Syracuse.

#### Works Awhile, then Tours.

"Flying-Start" Hicks will soon quit his position on the New York World and take a two years' tour—through Asia, this time. Hicks saves up for two years and then takes a two years' trip abroad, and earns something while away by syndicate writing. He will flirt with the pretty Japanese maidens inside of two months, as his first stopping place is Japan. W. G. is full to the brim on the value of a "flying start," and will probably advise the Japs to send their champions off that way.

#### Books and Pamphlets Received.

The REFEREE acknowledges the receipt of the following:

Calendars—Pope Manufacturing Company, Overman Wheel Company, Hibbard, Spencer, Bartlett & Co., Kirkwood, Miller & Co., McKee & Harrington, H. T. Hearsey & Co., Singer & Company.

Gormully & Jeffery Manufacturing Company, catalogue—Beautiful embossed cover and neatly designed; shows four styles of Rammers and all sorts of sundries.

Stokes Manufacturing Company, dictionary of cycle terms—Humorously illustrated; a very catchy affair.

New York Belting and Packing Company, catalogue—Shows the Burris-Michelin, Protection Strip and laced Mackintosh tires; also pedaled rubbers and prices on solid and cushion tires.

National Columbian United Wheelmen's Association, prospectus—Gives details of the club house and illustrations of those who are assisting the enterprise.

Pope Manufacturing Company, catalogue—Shows the various styles of the Columbia, as mentioned last week.

#### Des Moines C. C. Dance.

The Des Moines C. C.'s leap year party last Thursday night was a most brilliant affair, as elaborate, probably, as any reception ever held in the Iowa city. The club house was elaborately decorated, the music was fine, the crowd immense and every detail complete. It was a novel sight to the dancers as well as to the spectators to see the young ladies filling programmes. Over seventy-five couples were in attendance.

The Englewood Cycling Club gave a smoker New Year's eve.

A CHANGE WITH THE SEASONS.
